(1) Indexes for 1972 are subject to revision. - Les indices pour 1972 sont sujets à révision.

(2) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. - Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels:

	Old Series Ancienne série	New series Nouvelle série
December - 1970 - Décembre	95.1	92.3
January - 1971 - Janvier	95.1	92.1
Average - 1971 - Moyenne	95.2	91.8

(1) Includes gold. - Y compris l'or. (2) Consists of iron products and non-ferrous metals groups above but excluding gold. - Se compose des groupes élémentaires des produits du fer et des produits des métaux non ferreux moins l'or. (3) These two series comprise the General Wholesale Index. - Ces deux séries comprennent l'indice général de gros. (4) Excludes gold. - Sauf l'or. (5) All indexes for current year are subject to revision. - Les données de l'année courante sont sujettes à révision.

(1) Final to July 1971. See page 80 for details on Western grain prices and specific publications wherein final indexes or earlier years may be found. — Indices définitifs jusqu'en juillet 1971. Pour des données détaillées sur le prix des céréales de l'Ouest, voir page 80 ainsi que les publications spéciales qui contiennent les derniers indices ou ceux des années précédentes.

(2) All indexes for current year are subject to revision. — Les données de l'année courante sont sujettes à révision.

TABLE 4. Wholesale Price Indexes of Selected Primary Commodities(1)

TABLEAU 4. Indices des prix de gros de certains produits bruts(1)

(1935-39=100)

Primary commodities — Produits bruts	Months — Mois				Annual averages — Moyenne annuelle		
	August 1972 Août	July 1972 Juillet	August 1971 Août	July 1971 Juillet	1971	1970	1969
Asbestos, crude — Amiante brut	429.7	429.7	429.7	429.7	420.6	411.6	399.7
Beans, cocoa — Graines de cacao	630.5	645.1	615.9	603.4	582.7	752.7	1,042.8
Beans, coffee — Grains de café	407.7	382.5	302.8	303.6	317.4	391.7	302.6
Copper, electrolytic — Cuivre électrolytique ...	463.8	463.8	501.1	501.1	492.5	541.6	483.6
Cotton, raw — Coton brut	346.0	335.5	294.3	294.1	292.1	282.0	276.3
Eggs — Oeufs	145.2	138.4	120.1	111.8	122.1	139.6	161.7
Fruits, fresh — Fruits frais	224.2	214.0	224.7	210.6	230.0	229.6	225.8
Grains — Céréales	197.7	188.3	189.4	198.9	192.3	193.7	200.4
Hides and skins — Cuir et peaux vertes	319.5	290.2	145.6	146.2	157.6	171.4	185.6
Lead, electrolytic — Plomb électrolytique	335.4	335.4	283.0	283.0	283.0	331.0	318.8
Livestock — Bétail	469.4	475.7	389.4	383.8	386.0	396.2	400.3
Nickel	474.1	474.1	474.1	474.1	474.1	474.8	390.6
Onions — Oignons	417.7	425.6	329.3	197.9	180.8	261.6	221.9
Potatoes — Pommes de terre	319.2	241.3	235.3	259.7	194.2	247.2	170.5
Rubber, raw — Caoutchouc brut	109.2	109.2	114.2	109.2	117.4	140.8	179.3
Scrap iron and steel — Déchets de fer et d'acier	272.0	272.0	268.0	273.2	284.2	328.9	250.0
Silver — Argent	469.0	443.9	416.5	413.2	405.6	478.1	497.5
Steers — Bouvillons	604.7	616.6	549.3	552.9	548.8	510.8	496.6
Sugar, raw — Sucre brut	218.3	206.9	170.5	169.7	178.7	160.9	144.1
Tin — Étain	345.3	336.8	320.9	326.5	324.2	349.6	338.0
Wool, raw domestic — Laine brute indigène	194.2	181.2	136.4	136.4	141.1	152.4	169.1
Wool, raw, imported — Laine brute importée	185.0	179.7	134.4	134.8	135.0	149.3	163.0
Zinc, prime, western — Zinc de première qualité, de l'Ouest	422.5	422.5	378.0	355.8	357.6	341.0	326.1

(1) All indexes for current year are subject to revision. — Les données de l'année courante sont sujettes à révision.

TABLE 4A. PURCHASE PRICE INDEXES OF SECONDARY METALS(1)

(5) Excludes houses, mortgage interest and property taxes. - Excluant les maisons, les intérêts hypothécaires et les taxes foncières.

TABLE 10. Consumer Price Indexes for Canada - Selected Food Items

TABLEAU 10. Indices des prix à la consommation pour le Canada - Denrées alimentaires choisies (1961=100)

	August 1972 Août	July 1972 Juillet	August 1971 Août	July 1971 Juillet	1971	1970	1969
<u>Dairy products - Produits laitiers</u>							
Milk, fresh - Lait frais	152.1	150.9	146.7	143.9	145.1	138.9	137.1
Milk, evaporated - Lait évaporé	136.9	136.7	121.1	120.6	119.6	112.5	112.9
Powdered skim milk - Poudre de lait écrémé	161.2	158.7	144.1	142.8	139.9	130.3	128.3
Butter, creamery, first grade - Beurre de crèmerie, 1 ^{re} qualité	108.9	108.8	103.4	102.7	104.0	102.3	103.0
Cheese, plain, processed - Fromage ordinaire fondu	147.9	147.7	133.8	131.9	133.4	130.3	127.9
<u>Poultry and eggs - Volaille et oeufs</u>							
Chicken, grade A evisc. - Poulet, qualité A, évis- céré	129.8	131.5	118.7	115.9	112.0	107.7	111.2
Turkey, grade A evisc. - Dinde, qualité A, éviscérée	110.0	108.8	96.9	94.6	95.8	99.1	101.6
Eggs, fresh, grade A large - Oeufs frais, qualité A gros	102.3	96.0	83.9	82.5	87.3	99.0	109.9
Eggs, fresh, grade A medium - Oeufs frais, qualité A moyens	102.8	91.5	81.5	83.4	86.8	98.6	114.1
<u>Beef - Boeuf</u>							
Sirloin steak - Bifteck de faux filet	162.5	160.4	152.7	149.4	143.4	139.7	139.3
Round steak - Bifteck dans la ronde	159.7	160.5	149.9	149.3	148.0	143.7	135.6
Prime rib roast(1) - Rôti de plat de côtes(1)	159.6	157.0	143.7	143.9	139.9	134.4	133.5
Blade roast(2) - Rôti de haut-côté(2)	151.1	149.7	130.5	135.1	133.1	133.5	131.8
Stewing beef - Boeuf pour ragout	159.4	158.2	146.8	145.5	145.9	142.1	138.3
Hamburg - Boeuf haché	173.7	170.2	149.6	149.3	148.5	144.8	138.8
Liver, sliced - Foie en tranches	140.5	142.7	120.0	119.1	119.1	132.3	115.3
<u>Pork - Porc</u>							
Rib chops, fresh - Côtelettes fraîches	161.5	156.3	125.8	119.2	122.7	137.2	140.8
Shoulder roast, Boston butt, fresh - Rôti dans l'épaule, soc de Boston, frais	132.7	129.5	102.6	101.3	102.4	120.5	129.9
Sausage, pure pork - Saucisse pur porc	134.8	131.7	119.3	119.8	119.6	127.2	127.4
Bacon, side, fancy, sliced, rind off - Bacon, flanc, de fantaisie, en tranches, sans couenne	107.9	102.2	74.0	73.4	76.4	102.2	101.1(6)
Ham, smoked, boneless(3) - Jambon fumé, désossé(3)	140.9	140.9	112.0	113.8	115.4	135.2	138.4
<u>Other meats - Autres viandes</u>							
Lamb, leg roast - Agneau, gigot	120.5	121.2	117.6	114.2	113.7	114.8	109.1
Veal, loin chops, rib end - Veau, côtelettes, bout de côte	194.0	192.0	165.5	165.1	165.0	162.6	151.5
Wiener or frankfurters - Saucisses de Francfort	129.6	130.2	121.3	119.8	119.0	121.5	120.1
Meat loaf, canned, mainly pork - Pain de viande, en conserves, principalement de porc	122.0	121.3	121.1	122.7	123.0	130.7	125.0
<u>Fish - Poisson</u>							
Cod fillets, frozen(5) - Filets de morue, conge- lés(5)	221.8	221.2	164.3	163.8	160.6	143.3	135.4
Salmon, canned, fancy pink - Saumon, en boîte, de fantaisie, rose	146.9	146.3	144.3	142.1	143.0	144.1	129.9
<u>Fats and oils - Huiles et corps gras</u>							
Margarine	109.1	110.1	112.2	115.2	114.8	112.1	105.5
Lard, pure - Saindoux pur	118.4	117.9	108.2	109.7	111.4	118.7	103.6
Shortening	123.3	123.4	119.9	119.8	118.7	114.1	109.4
Salad dressing - Vinaigrette	108.6	111.0	106.9	106.1	105.4	104.7	102.7
<u>Cereals and bakery products - Céréales et produits de la boulangerie</u>							
Flour, white, all purpose - Farine blanche, tout usage	135.6	135.2	132.1	132.7	131.3	133.5	134.3
Corn flakes - Flocons de maïs	123.1	119.3	123.6	123.4	119.6	117.4	116.2(7)

Peas, canned, choice - Pois en boîte, de choix	123.2	122.6	118.4	115.5	117.0	125.7	126.5
Corn, canned, cream, choice - Mais en boîte, en crème, de choix	122.0	121.6	121.2	120.2	119.9	124.7	123.3
Infants' food, vegetable - Aliments pour bébés, légumes	132.9	132.7	123.9	123.9	124.8	118.9	120.1
Beans, with pork and tomato sauce - Haricots au porc à la sauce tomate	132.5	131.7	133.0	131.9	131.6	129.3	126.8
Soup, vegetable - Soupe aux légumes	99.8	99.6	100.0	99.5	99.3	99.7	97.9
Tomato juice, fancy - Jus de tomate de fantaisie ...	109.5	108.5	102.2	101.2	100.4	100.3	98.9(8)
Beverages - Breuvages							
Tea bags - Thé, sachets, orange pekoe	103.1	103.9	101.0	102.2	100.3	101.9	102.5
Coffee, medium quality - Café, qualité moyenne	126.8	125.8	136.3	134.0	132.2	132.4	115.5
Coffee, instant, dried - Café instantané, séché	111.7	111.3	113.1	112.7	112.3	112.9	107.2
Miscellaneous Groceries - Denrées diverses							
Tomato catsup - Ketchup aux tomates	123.8	122.4	118.8	116.1	115.9	112.6	111.6
Peanut butter, plain - Beurre d'arachides, ordinaire	132.2	129.1	139.0	138.0	136.9	139.8	125.0
Pickles, sweet, mixed - Cornichons sucrés variés ...	134.0	133.8	129.1	129.1	127.7	125.3	121.4
Jelly powders, flavoured - Gelée en poudre aromatisée	127.5	127.4	123.3	123.7	121.5	118.0	117.1

(1) Includes cuts with bone-in and boned and rolled. - Y compris les morceaux avec os, sans os et roulés.

(2) Includes cuts with blade-in and blade removed. - Y compris les morceaux avec ou sans palette.

(3) Indexes based on chain store prices in 7 cities. - Les indices sont fondés sur les prix dans les magasins à succursales multiples de 7 villes.

(4) Indexes based on prices for pectin and pure jam combined. - Les indices sont basés sur les prix de la confiture avec pectine et de la confiture pure.

(5) Indexes based on prices in 16 cities. - Les indices sont fondés sur les prix dans 16 villes.

(6) 1965=100. - 100 en 1965.

(7) 1963=100. - 100 en 1963.

(8) June 1968=100. - 100 en juin 1968.

TABLE 11. Consumer Price Indexes, Regional Cities, 1962-72(1)

TABEAU 11. Indices des prix à la consommation, agglomérations urbaines, 1962-72(1)

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes or retail price differentials refer to Table 13. - Nota: (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au Tableau 13.

(1) To assist comparison with other published series the indexes presented have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request. - Afin de faciliter la comparaison avec les autres séries publiées, les indices qui figurent ici ont été l'objet d'une conversion arithmétique portant l'indice à 100 en 1961 au lieu de 1956. Les indices calculés sur la base de 100 en 1956 sont fournis sur demande.

(2) The years referred to are fiscal years. For example 1956 represents the period April 1, 1956 to March 31, 1957. - Les années données ici sont des années financières. Par exemple, l'année 1956 représente la période allant du 1^{er} avril 1956 au 31 mars 1957.

(3) Major components for the provincial indexes were presented in the November 1970 issue of Prices and Price Indexes. - Les principaux éléments des indices pour les provinces ont paru dans la livraison de novembre 1970 de Prices and Price Indexes.

(4) Direct comparisons should not be made between this index and the highway index published by the Ont. Dept. of highways. The item content of the indexes is different. - On ne peut comparer directement cet indice avec celui de la voirie publié par le Ministère de la voirie de l'Ontario. Les éléments des deux indices sont différents.

(5) For further detailed explanation see Prices and Price Indexes - March 1971. - Pour plus de renseignements, voir Prices and Price Indexes, - mars 1971.

(6) For further detailed explanation see occasional paper 62-526. - Pour plus de renseignements, voir le bulletin hors série N° 62-526 au catalogue.

(7) For further detailed explanation see occasional paper 62-533. - Pour plus de renseignements, voir le bulletin hors série N° 62-533 au catalogue.

Industrial Price Indexes

Indices des prix industriels

Industry Selling Price Indexes (1961=100)

Indices des prix de vente dans l'industrie (1961=100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles on recueille des statistiques sur les expéditions de produits, sur l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue No. 62-528.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", n° 62-528 au catalogue.

Industry Selling Price Index: Manufacturing

Indices des prix de vente dans l'industrie: Industries manufacturières

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix des livraisons des industries manufacturières qui utilisent de la farine comme ingrédient de leurs produits, tels que le pain, les biscuits ou les gâteaux.

General Wholesale Index (1935-39=100)

Indice général des prix de gros (1935-39=100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité, l'expression "de gros" fait penser plus au commerce de gros qu'au niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de dire exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, cet indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services,

and services, except in so far as prices of these things are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: Wholesale Price Indexes 1913-50 (Reference Paper No. 24) Prices and Price Indexes 1949-52 (Vol. 23) (Catalogue No. 62-501).

Farm Input Price Indexes (1961=100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. These data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961=100 time base.

Farm Input Price Indexes replace one of the two major component indexes of the previously published series, Price Index Numbers of Commodities and Services Used by Farmers, 1935-39=100. The latter index was composed of a Farm Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replaces the Composite Index Exclusive of Living Component from 1961 forward.

A detailed description of concepts, methods and data sources is contained in the occasional paper, Farm Input Price Indexes, 1961=100, Catalogue No. 62-534, and is reproduced in the September 1971 issue of Prices and Price Indexes, Catalogue No. 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, Farm Input Price Indexes, 1961=100, Catalogue No. 62-004, and in the monthly publication Prices and Price Indexes, Catalogue No. 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterpart, and publication has been suspended.

Canadian Farm Products Price Index (1935-39=100)

Prices of Western wheat used in the index prior to August 1972, are buying prices of the Canadian Wheat Board for Nos. 1, 2 and 3 Northern at Thunder Bay. From August 1 1972 forward, prices used are for Nos. 1 and 2 C.W. Red Spring 14 % at Thunder Bay. Prices for western oats and barley are also supplied by the Wheat Board. Initial payments are first used in the index calculation and are revised as further payments are announced.

Final payments for the crop year August 1970 - July 1971 were announced on February 11, 1972 for wheat, and on June 21, 1972 for oats. No final payment was granted for barley for the 1970-71 crop year, however, the initial payment was increased by 10¢ on February 25, 1971.

sauf si elles sont comprises dans le prix des produits. En tant que chiffre représentatif classique, on a eu tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros, consulter Wholesale Price Indexes 1913-50 (Reference Paper No. 24) et Prices and Price Indexes 1949-52 (Vol. 23) (n° 62-501 au catalogue).

Indices de prix des entrées dans l'agriculture (1961=100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui y sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961=100.

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39=100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

Le bulletin hors série Farm Input Price Indexes, 1961=100 (n° 62-534 au catalogue) contient une description détaillée de concepts, des méthodes et des sources de données qui est reprise dans Prices and Price Indexes de septembre 1971 (n° 62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest du Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel Farm Input Price Indexes, 1961=100 (n° 62-004) et dans le bulletin annuel Prices and Price Indexes (n° 62-002).

On n'a pas remplacé l'indice du coût de la vie pour la famille agricole des séries de 1935-39 par un équivalent à jour et on a cessé de le publier.

Indice des prix des produits agricoles canadiens (1935-39=100)

Les prix du blé canadien sur lesquels étaient basés le calcul de l'indice avant le mois d'août 1972 étaient les prix payés par la Commission canadienne du blé pour le blé nos 1, 2 et 3 du Nord à Thunder Bay. A compter du 1^{er} août 1972, les prix utilisés sont ceux du blé rouge de printemps, Nos 1 et 2 (14 %) à Thunder Bay. Pour calculer l'indice, on se sert d'abord des premiers paiements et on les rectifie à mesure que d'autres paiements sont annoncés.

Les prix définitifs pour la campagne allant d'août 1970 à juillet 1971 ont été annoncés le 11 février 1972 en ce qui concerne le blé et le 21 juin 1972, en ce qui concerne l'avoine. Il n'y a pas eu de dernier paiement pour l'orge en 1970-1971; toutefois, le paiement initial a été majoré de 10 cents le 25 février 1971.

Unit — Unité	Initial and total participation payments 1970-71, 1971-72 and 1972-73 — Paievements initiaux et ensemble des paievements de participation 1970-71, 1971-72 et 1972-73

- (1) Used in original indexes from Aug. 1970 to July 1971. — Utilisé dans les premiers indices d'août 1970 jusqu'en juillet 1971.
- (2) Incorporated retroactively in revised final indexes Aug. 1970 to July 1971. — Inclus rétroactivement dans les indices finals révisés d'août 1970 à juillet 1971.
- (3) Used in indexes Aug. 1971 to July 1972. — Utilisé les indices d'août 1971 jusqu'en juillet 1972.
- (4) Used in current indexes. — Utilisé dans les indices courantes.

Residential and Non-Residential Building Construction Price Indexes

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of users (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of *Prices and Price Indexes*, and this explanation is available on request from the Prices Division, as is historical monthly data for the series.

Because the indexes measure the impact of price change on the materials and labour inputs to construction, and not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as indicators of price change for the output of building construction, or buildings in place. Users are therefore warned to exercise caution in making use of the series, for this purpose. A comparison of these series with the implicit price deflators (1) providing an estimate of price change for the output of the industry, derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of

Indices des prix de la construction résidentielle et non résidentielle

Les indices à pondération fixe des prix des entrées de matériaux et de salaires dans la construction résidentielle et non résidentielle sont publiés ici pour faciliter la tâche aux utilisateurs (Tableau 20). On trouvera une description plus détaillée des caractéristiques des indices dans *Prices and Price Indexes* de mai 1970. On peut s'en procurer un exemplaire ainsi que les données mensuelles chronologiques sur cette série en s'adressant à la Division des prix.

Comme les indices mesurent l'influence des variations de prix sur les entrées de matériaux et de main-d'oeuvre du bâtiment plutôt que les répercussions des variations de marges bénéficiaires ou de productivité, on les croit surestimés en tant qu'indicateurs des variations de prix de la construction, ou des bâtiments construits. Les utilisateurs devront donc faire preuve de discernement quant ils se serviront de séries à cette fin. Si l'on compare ces séries avec les facteurs de dégonflement (1) des prix implicites (qui donnent une estimation de la variation du prix pour la production de l'industrie), obtenus en mesurant la formation brute de capital fixe en dollars constants, on aura un aperçu des effets de l'ajustement sur l'évolution des prix des indices à pondération fixe des entrées pour

(1) National Income and Expenditure Division, Statistics Canada.

(1) Division du revenu national et de la défense nationale, Statistique Canada.

adjusting the fixed-weighted input indexes for changes in productivity and profit margins.

During the period from 1926-1966 a special sample of respondents supplied materials prices for the index. As of 1961 this sample has been replaced with prices from the ISPI system(2). The latter are published monthly in Table 2 of this publication.

The Construction wage rate series is based on wage rate material supplied by the Labour Standards Branch, Dept. of Labour, and relates to minimum wages paid on government contracts for construction in a variety of trades and cities.

Users are reminded that the indexes were arithmetically rebased to the year 1961=100 and therefore combining the components with the weights as shown will not provide the composite index provided. Users able to provide their own weights for the components can recombine the components to suit their particular needs.

Price Indexes of Machinery & Equipment

In response to the need of users wishing either to correct expenditure data of machinery and equipment for price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968=100 and most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

Conceptually purchasers' prices should be utilized in such indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and federal sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices Division collections from manufacturers most of whom reside in the United States.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

Highway Construction Price Indexes (1961=100) (3)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the

(2) Industry Selling Price Indexes 1956-1968 Cat. 62-528.

(3) The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

tenir compte des variations de productivité et de marges bénéficiaires.

Au cours de la période 1926-1966, un échantillon spécial d'enquêtés a donné les prix pour l'indice. En 1961, on a remplacé cet échantillon par les prix tirés du système I.P.V.I. Ces prix sont publiés par mois dans le Tableau 2 du présent bulletin.

La série consacrée au taux de rémunération dans l'industrie du bâtiment est basée sur les chiffres fournis par la Direction des normes du travail du ministère du Travail; elle trait au salaire minimum versé aux termes de marchés signés avec le gouvernement pour des travaux de construction dans divers corps de métiers et dans diverses villes.

Nous rappelons aux utilisateurs que les indices ont été recalculés sur la base 1961=100 et qu'ils n'obtiendront pas l'indice synthétique fourni en combinant les éléments et les pondérations donnés. Les utilisateurs qui sont à même de fournir leur propre pondération pour les éléments peuvent procéder à leur propre combinaison adaptée à leurs besoins spécifiques.

Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968=100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente des fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du U.S. Bureau of Labor Statistics ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre, à mesure qu'ils seront disponibles. En attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de prix des marchandises, compte tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.

Indices des prix de la construction routière (1961=100) (3)

Les indices des prix de la construction routière au Canada représentent les prix payés chaque année par les administrations provinciales au titre des marchés de construction routière, en pourcentages des sommes payées en 1961. La conversion des indices à la base 1961=100 ne modifie pas leur évolution en pourcentages comparativement aux indices publiés.

(2) Indices des prix de vente dans l'industrie, 1956-1968, Cat. 62-528 au catalogue.

(3) Il s'agit d'exercices financiers. 1968 représente donc la période du 1^{er} avril 1968 au 31 mars 1969.

previously published indexes to a 1956=100 time base. Users are warned that an aggregation of the converted major group indexes with the published weights will not yield the published 1961=100 all items indexes. The conversion does not create this problem for a user wishing to reweight the converted major group indexes using weights appropriate to his own purpose.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by specified provincial governments during the weight-base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956 are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problems of estimating price change for highway construction see pages vi & vii of the December 1967 issue of Prices and Price Indexes, Catalogue 62-002 and pages 9 & 10 of the reference paper Price Indexes of Highway Construction in Catalogue 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or up-dating previously costed roadwork, in estimating replacement cost of previously completed roadwork, and as historical measurements of price trends in highway construction.

The indexes do not necessarily reflect the price movements of non-contract construction or maintenance work. The indexes are designed to measure price changes for a fixed programme of highway construction, in each of the seven provinces. Because price levels in the time base-period (1961) varied from province to province the indexes cannot be used to compare price differences between provinces, but only to compare differences in the rate at which prices are changing in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction price indexes but rather for units of construction work put in place such as an acre of clearing, a cubic yard of earth excavation or a ton of bituminous hot-mix paving. In addition, the index contains prices of some materials, such as culvert pipe, usually supplied to the contractor by the highway departments. Prices of highway construction work are annual weighted averages of bid prices of units of construction in groups of contracts awarded, classified by price-determining characteristics of the contracts and the bid items such as volume of the bid item, type of contract and geographic location. Prices of material items of supply are prices paid by government departments to suppliers.

Price Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and equipping electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction technology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

As the market does not yield comparable selling prices for such unique transactions as, for example, the sale of a transmission line, it was not possible to produce an index of the prices of completed structures. Completed structure indexes would be appropriate for

précédemment et dont la base était 1956=100. Les utilisateurs ne doivent pas s'attendre à ce que le groupement des indices convertis des grands groupes et des pondérations publiées donne l'indice général publié (1961=100). Cette conversion ne pose aucun problème à l'utilisateur qui désire réviser la pondération des indices convertis des grands groupes en utilisant les poids adaptés à ses fins propres.

Les indices pondérés en fonction de la base sont publiés chaque année; ils mesurent, pour la période allant de 1956 à 1968, l'influence de l'évolution des prix sur le coût des programmes spécifiques de construction de routes au Canada représenté par les marchés de construction de routes d'environ \$50,000 ou plus accordés par certaines administrations provinciales au cours de la période visée par la base de pondération. Les poids des éléments des indices qui représentent l'importance relative des unités de construction en 1956 sont constants. Seules les estimations de prix varient d'une année à l'autre; les indices mesurent donc l'évolution des prix dans le temps. Pour plus de détails sur l'estimation de l'évolution des prix pour la construction routière, se reporter aux pages vi et vii du numéro de décembre de Prices and Price Indexes (n° 62-002 au catalogue de Statistique Canada) et aux pages 9 et 10 du bulletin intitulé Price Indexes of Highway Construction in Canada (n° 62-520 au catalogue de Statistique Canada). L'indice général ou ses éléments servent à la planification et à la budgétisation des programmes de construction routière, à indexer ou à mettre à jour les prix de travaux de routes effectués précédemment, à estimer le coût de remplacement des travaux routiers achevés précédemment et à mesurer chronologiquement l'évolution des prix de la construction routière.

Les indices ne reflètent pas nécessairement l'évolution des prix de la construction effectuée hors marché ou des travaux d'entretien; ils servent à mesurer les variations de prix pour un programme déterminé de construction routière dans chacune des sept provinces. Au cours de la période qui a servi de base (1961), les niveaux de prix ont varié d'une province à l'autre; aussi, on ne peut utiliser les indices pour comparer des différences de prix entre les provinces mais on peut seulement les employer pour comparer les différences entre taux de variation des prix dans les provinces.

Les prix compris dans l'indice ne se rapportent pas aux unités de travail ni de matériaux comme c'est habituellement le cas dans l'indice des prix de la construction; ils se rapportent plutôt aux unités de travail de construction effectué, comme le défrichement d'une acre de terrain, l'excavation d'une verge cube ou l'épandage à chaud d'une tonne de béton bitumineux. En outre, l'indice comprend le prix de certains matériaux, par exemple, les tuyaux de ponceau fournis habituellement à l'entrepreneur par les ministères de la Voirie. Les prix des travaux de construction routière sont des moyennes pondérées des prix de soumission pour les unités de construction par groupe de marchés classés selon les caractéristiques des marchés qui déterminent le prix et les éléments d'offre tels que le volume de chaque poste, le type de marché et la situation géographique. Les prix des matériaux fournis sont les prix payés par les ministères aux fournisseurs.

Indices des prix à la construction dans les services d'électricité

En ce qui concerne les services d'électricité, l'indice a pour but de fournir une estimation des conséquences des variations de prix sur le coût des matériaux, de la main-d'œuvre et du matériel utilisés dans la construction et l'équipement des services d'électricité au cours d'une période de référence donnée. L'indice sert à mesurer combien il faudrait payer en plus ou en moins pour réaliser un programme de construction identique à celui de la période de référence en utilisant les mêmes techniques de construction et en supposant que les taux de rentabilité et de productivité de la construction soient les mêmes pour les deux périodes.

Comme il est impossible d'obtenir directement sur le marché des prix de vente comparables pour des opérations de caractère aussi unique, par exemple, que la vente d'une ligne de transport d'énergie, Statistique Canada n'a pu établir un indice du prix des installations en place. Un tel indice ne

users wishing either to estimate reproduction costs or to deflate capital formation. For such uses the indexes introduced in this publication have specific shortcomings. Nonetheless, they may be helpful for such purposes provided the users understand the deficiencies. Thus the reader is asked to make particular note of Section III, of Occasional Paper Catalogue 62-526 Price Indexes of Electrical Utility Construction - The Necessity for Compromise and Section XI, (of the same paper) Uses and Limitations. In addition, because particular construction projects are unique, the aggregate indexes will not likely be appropriate to specific projects since they relate to an average mix of materials, labour and equipment derived from a variety of projects in a specific base period. Thus, if the component price indexes and their weights included in the aggregate index presented herein are inappropriate for a particular purpose the user should consider selecting appropriate component indexes from among those published herein. These indexes could then be combined into an aggregate index by utilizing weights derived from the projects or assets to be costed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials or equipment. The price reported is for units and terms of sale representative of the volume sales of the manufacturer. Where sales to electric utilities form a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and others directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial tax changes. Until December 1964 wage rate data were supplied by the Federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union basic wage rates reported by major utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban own account and contract electric utility construction. Some further improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Construction has been defined as new construction or major reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by major utilities, relating to own account and to contract construction erected during the last half of the 1950's. Weights were derived from these data which indicated the relative importance of the major inputs to the construction. The components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and expenditures for labour, e.g. - linemen and groundmen. Costs relating to construction equipment such as trucks, and components of equipment operating costs such as tires, gasoline and repairs were also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land and rights-of-way have been excluded.

The term Canadian electric utility has been defined to include municipal as well as nonmunicipal utilities but the majority of the cost data tabulated was derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

serait utile que si l'on désirait obtenir une estimation des sommes qu'il faudrait engager pour réaliser à nouveau un programme de construction identique ou encore pour dégonfler une formation de capital. Les indices publiés ici présentent en ce sens certaines lacunes. Ils peuvent néanmoins servir à de telles fins pourvu que les utilisateurs en comprennent les limites. Les lecteurs peuvent se reporter aux Sections III et XI de la publication Price Indexes of Electrical Utility Construction (Statistique Canada, 62-526): "The Necessity for Compromise" et "Uses and Limitations". De plus, en raison du caractère unique de chaque projet de construction, l'indice synthétique ne pourra sans doute pas s'appliquer à un projet bien précis car il porte justement sur une moyenne des matériaux, de la main-d'oeuvre et du matériel utilisés dans la réalisation de plusieurs projets au cours d'une période de référence donnée. Ainsi, si les indices détaillés et les poids correspondants qui composent les indices synthétiques présentés ici ne conviennent pas à un usage bien précis, l'utilisateur pourra toujours se servir des autres indices détaillés et construire, à l'aide des coefficients de pondération, les indices de son choix, soit pour évaluer le coût d'un projet, soit pour établir des facteurs de dégonflement.

La plupart des prix des matériaux et du matériel utilisés pour établir les indices sont les prix de vente déclarés mensuellement par les fabricants. Ces prix sont représentatifs des unités de mesure et des conditions de vente valables pour les ventes en grande quantité des fabricants. Lorsque les ventes aux services électriques ne représentent qu'un faible pourcentage du chiffre d'affaires d'un fabricant, il est possible que le prix déclaré ne représente pas de façon satisfaisante le prix consenti aux entreprises en construction et aux autres industries s'occupant directement de construction et d'installation de services d'électricité. Dans ces cas, on a inclus dans l'indice les prix facturés aux autres fabricants ou grossistes. On a tenu compte, dans l'établissement de l'indice, des variations de la taxe de vente fédérale; toutefois, il n'a été fait aucun redressement pour les variations de taxe provinciale. Jusqu'en décembre 1964, les données sur les taux de rémunération étaient fournies par le ministère fédéral du Travail et représentaient le salaire horaire minimum versé aux personnes travaillant au titre d'un marché accordé par le gouvernement fédéral dans certaines grandes villes. En 1965, on fit entrer dans l'indice le salaire de base exigé par les syndicats et déclaré par les principaux services et par certains entrepreneurs. L'échantillon choisi représente donc une estimation des variations du taux de rémunération dans la construction en ville de services électriques pour compte propre ou au titre d'un marché. Certaines améliorations à l'indice sont prévues de façon à l'étendre aux personnes non syndiquées travaillant dans les régions rurales à la construction de lignes de transport d'énergie.

Le terme "construction" a été défini comme étant la construction neuve ou la réparation de réseaux de distribution, de lignes de transport d'énergie, de postes de transformation ou de postes de manoeuvre. L'entretien et les frais d'exploitation ne sont pas compris. Les données sur les prix de revient sont fournies par les principaux services d'électricité et portent sur la construction exécutée pour compte propre ou au titre d'un marché au cours de la deuxième moitié des années cinquante. Les poids tirés de ces données représentent l'importance relative des principaux éléments entrant dans la construction. Les composantes du coût de la distribution et du transport comprennent certains éléments comme les poteaux, la quincaillerie, les conducteurs, les isolateurs, les compteurs, les transformateurs de distribution et les dépenses en main-d'oeuvre (monteurs, personnel de service, etc.). Les dépenses entraînées par le matériel de construction (camions et pièces d'équipement) et les frais d'exploitation (pneus, essence et réparations) sont également inclus. Les postes de transformation et les postes de manoeuvre comprennent certains des éléments ci-dessus; les frais les plus importants sont cependant entraînés par les transformateurs et les appareils de connexion. Les dépenses foncières et les droits de passage ont été exclus.

Par définition, l'expression "service d'électricité canadien" englobe aussi bien les services municipaux que les autres; toutefois, la majeure partie des données de coût ont été tirées des déclarations des services non municipaux. Les fabricants qui produisent de l'électricité destinée à l'autoconsommation et qui peuvent également vendre de l'électricité ont été exclus de cette enquête.

Price Indexes of Hydro-electric Generating Stations

The following additional points may be of assistance to users of the hydro-electric generating stations index which was described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

- (a) Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.
- (b) Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.
- (c) Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.
- (d) Weighting patterns exclude expenditure for ancillary facilities for logging and navigation, permanent houses, etc.

Purchase Price Indexes of Secondary Metals (1969=100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto, Montreal and Canadian stock exchanges. The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the common and mining stock indexes are Thursday's closing quotations as reported in the Globe and Mail and the Montreal Gazette. For preferred stocks, prices are monthly weighted averages of the daily closing prices in which weights are daily total sales. The price reference base for the indexes is the year 1956 which has been adopted as an interim base for recently developed Statistics Canada indexes. The indexes express prices as a percentage of prices in 1956 and arithmetically converted to the 1961=100 base.

Revised indexes on the base 1956=100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the index, apart from the shift in the price reference base, is the classification of stocks according to the Standard Industrial Classification. In the continuing major group Industrials 4 sub-groups (Milling and Grains, Food and Allied Products, Machinery and Equipment, and Building Materials) have been replaced by 8 new sub-groups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-Metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of the former index, viz., Industrial Mines, Beverages, Textile and Clothing, Pulp and Paper, and Oils (renamed Petroleum) have been continued. The major group Utilities is continued but the Pipelines index has been added as a sub-group and the previous Power and

Indices de prix des centrales hydroélectriques

Les points supplémentaires ci-après peuvent aider les utilisateurs de l'indice des centrales hydroélectriques décrit en détail dans le bulletin hors-série de Statistique Canada portant le numéro 62-533.

- a) Les données sur le taux de rémunération proviennent de diverses sources et surtout des enquêtes sur les accords syndicaux de l'Association canadienne de la construction et des études du Bureau de recherche sur les traitements portant sur la rémunération des travailleurs intellectuels, des techniciens et du personnel administratif. Pour le calcul de l'indice, on a utilisé les taux de rémunération de base, avantages sociaux non compris.
- b) Au lieu du prix des entrées de main-d'oeuvre, de matériaux et de location de matériel pour la production de béton et des remblais effectués, on a utilisé le prix du béton préparé et celui de la terre et du gravier en place.
- c) L'indice comprend les prix correspondant à certains postes de dépenses qui n'étaient pas repris auparavant dans les indices de prix des entrées dans la construction: intérêts pendant la construction, frais généraux, fourniture et entretien de baraquements temporaires.
- d) Les facteurs de pondération ne comprennent pas les dépenses affectées aux installations auxiliaires pour l'exploitation forestière et la navigation, les maisons permanentes, etc.

Indices du prix d'achat des métaux de deuxième fusion (1969=100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indices des cours des valeurs mobilières

Les indices des cours des valeurs mobilières donnent une mesure dans le temps de l'effet du mouvement des prix sur la valeur d'un portefeuille de titres achetés et détenus par un placeur hypothétique (et non pas un spéculateur). Le portefeuille représente des titres des sociétés canadiennes cotées à la Bourse de Toronto, de Montréal et à la Bourse canadienne. Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation. Les indices des prix des titres ordinaires et des titres miniers sont les cours de fermeture de la Bourse du jeudi indiqués dans le Globe and Mail et dans la Montreal Gazette. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles du total des ventes quotidiennes. La base de pondération entre les sous-groupes est l'année 1956. Toutes les séries ont été recalculées sur la base de 1961=100. Les indices sont pondérés d'après le nombre d'actions en circulation.

Les indices révisés sur la base 1956=100 ont été publiés pour la première fois dans la livraison de juin 1962 de ce bulletin. La plus importante modification à la révision de l'indice, à part le changement de la période de référence, a été le classement des actions d'après la Classification des activités économiques. Dans le cas du grand groupe des valeurs industrielles, 4 sous-groupes (minoterie et céréales, aliments et produits connexes, machines et matériel et matériaux de construction) ont été remplacés par 8 nouveaux sous-groupes (aliments, imprimerie et édition, métaux primaires, produits métalliques, minéraux non métalliques, produits chimiques, construction et commerce de détail). On a conservé les 5 autres sous-groupes de l'ancien indice: mines industrielles, boissons, textiles et habillement, pâtes et papiers, et huiles (sous la désignation de pétrole). Le grand groupe des services d'utilité publique a été conservé mais l'indice des pipe-lines a été ajouté comme sous-groupe et l'ancien sous-groupe d'énergie et

Traction sub-group has been replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A new major group Finance is composed of the former major group Banks and the former supplementary index Investment and Loan. Constant weights, which were previously limited to major groups, have been extended to sub-groups. Weights in the index continue to be based on shares outstanding.

For the list of stocks currently included in the Inventors Index and Preferred Index, see Prices and Price Indexes for February 1972.

traction a été remplacé par deux nouveaux sous-groupes: l'énergie électrique et la distribution du gaz. Le nouveau grand groupe "Finances" est composé de l'ancien grand groupe banques et de l'ancien indice supplémentaire investissements et prêts. Les facteurs constants de pondération qui étaient autrefois limités aux grands groupes s'appliquent maintenant aux sous-groupes. Les facteurs de pondération de l'indice continuent à être basés sur les actions en circulation.

La liste des titres repris actuellement dans les indices des valeurs de placements et dans les indices des valeurs privilégiées se trouve dans Prix et indices des prix de février 1972.

Retail Price Indexes

Consumer Price Index for Canada (1961=100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services of items for which there is a continually measurable market price over time, corresponding to a specific quantity of the item.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index is unlikely to represent closely the experience of any one family within the group nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families - (a) living in cities with over 30,000 population, (b) ranging in size from two adults to two adults with four children, and (c) with annual incomes during 1957 ranging from \$2,500 to \$7,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In 1952, the time base was updated to 1949=100 from 1935-39=100 and, at the same time, weights were revised to reflect family expenditure patterns in 1947-48. A subsequent revision of weights based on 1957 expenditures was introduced at the beginning of 1961 and the time base was revised from 1949=100 to 1961=100 at the beginning of 1969.

Full details on the latest weighting patterns and time base revisions are available in the occasional paper "The Consumer Price Index for Canada 1949=100" - Revision based on 1957 Expenditures", Statistics Canada Catalogue No. 62-518 and in the January 1969 issue of the monthly bulletin, Prices and Price Indexes, Catalogue No. 62-002.

Consumer Price Indexes for Regional Cities (1961=100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). The regional indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada except for their individual weighting systems.

Also, city indexes are not as comprehensive in price content as the Canada consumer price index and may underestimate slightly the degree of price movements occurring. In this connection, the shelter component of

Indices des prix de détail

Indice des prix à la consommation au Canada (1961=100)

L'indice des prix à la consommation sert à mesurer le taux de variation du prix qu'il en coûte pour acheter un "panier" de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" demeure le même; il équivaut tout au moins à une quantité égale de biens et services de qualité égale; de plus, il est constitué de produits pour lesquels on peut toujours trouver sur le marché un prix mesurable et correspondant à une quantité déterminée de ce produit.

L'indice porte sur un groupe étendu mais bien déterminé de familles urbaines et rend compte des variations des prix auxquelles l'échantillon en question a dû faire face. Il est fort peu probable que l'indice représente fidèlement l'expérience d'une famille en particulier; de même, il ne faut pas s'attendre à ce qu'il rende compte des variations des prix auxquelles ont fait face des groupes sensiblement différents par le revenu, la taille de la famille et le lieu de résidence. L'échantillon sur lequel porte l'indice est composé de familles - a) vivant dans des villes de plus de 30,000 habitants, b) dont la taille oscille entre deux adultes et deux adultes avec quatre enfants et c) dont le revenu annuel en 1957 oscillait entre \$2,500 et \$7,000. Pour évaluer l'influence des variations de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation porte sur les variations d'environ 300 articles.

L'indice des prix à la consommation au Canada remonte au début du siècle; depuis lors, on a révisé périodiquement la période de référence et les schémas de pondération. Ainsi, en 1952, la période de référence est passée de 1935-1939=100 à 1949=100; à la même occasion, les poids ont été revus de façon à présenter un reflet de la structure des dépenses des familles en 1947-48. La révision suivante des facteurs de pondération était fondée sur les dépenses des consommateurs en 1957 et fut introduite au début de 1961. Enfin, c'est au début de 1969 qu'on porta la période de 1949=100 à 1961=100.

Le lecteur trouvera de plus amples renseignements sur les dernières révisions du schéma de pondération et de la période de référence dans la publication occasionnelle "The Consumer Price Index for Canada (1949=100)" - Revision based on 1957 Expenditures" (n° 62-518) et dans la livraison de janvier 1969 du bulletin mensuel "Prices and Price Indexes" (n° 62-002).

Indices des prix à la consommation dans certaines agglomérations urbaines (1961=100)

Ces indices sont publiés mensuellement dans le présent bulletin (voir Tableau 11). Par leur conception et par les éléments qui les composent, ces indices sont en général similaires à l'indice des prix à la consommation au Canada, seuls leurs coefficients de pondération diffèrent.

Aussi, les indices de prix dans les villes ne représentent pas les prix de façon aussi complète que l'indice des prix à la consommation au Canada et ils peuvent sous-estimer légèrement l'importance des mouvements de prix. C'est ainsi que

the city indexes moves on the basis of changes in rents only, whereas changes in both rents and homeownership costs are included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and all-items indexes for cities have tended to underestimate somewhat the rates of price increase, particularly over longer periods. Studies are under way to incorporate homeownership prices in city indexes.

Each index is designed to measure the influence of changes in retail prices taking place in the localities specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in those particular areas.

In using the city indexes, it should be remembered that they are not indicators of comparative levels of prices as between the cities. That is, they do not in any way indicate whether prices are higher or lower in one city than in another.

For comparisons of retail price differentials between cities see Table 13 of this publication and the relevant explanatory note.

Historical Consumer Price Indexes (1969=100) for "Thunder Bay" and "Quebec City" are available, with explanatory notes on request from Retail Prices Section, Prices Division, Statistics Canada.

Measuring the Purchasing Power of Earnings

Changing consumer price levels affect the amounts of goods and services which a dollar will buy, and average earnings, of course, will be affected in the same way. An earnings measurement which takes the change of consumer prices into account, can be calculated by reducing actual earnings averages by the percentage amounts consumer price levels rise, or increasing them by the amount price levels fall. The adjusted averages may be used to indicate the comparative quantities of goods and services which could be purchased by average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the same interval a consumer price index advances from 100.0 to 110.0. Because of the 10% rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. Likewise, a 25% rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price increase. The adjusted average is \$90.91 ($100.00/110.0 \times 100.0$), which may be referred to as a weekly wage average for week B expressed in the dollars of period A, or it may be said to indicate the level of real weekly wages relative to week A.

l'élément "logement" des indices des villes varie en fonction des changements dans les loyers uniquement, alors que l'indice pour l'ensemble du Canada comprend les loyers et les coûts de propriété. A la suite d'une augmentation des coûts de propriété plus rapide que celle des loyers, les indices de l'habitation et de tous les éléments pour les villes ont tendu à sous-estimer quelque peu les taux de croissance des prix, surtout sur de plus longues périodes de temps. On étudie actuellement l'incorporation des prix de propriété dans les indices des villes.

Chaque indice est conçu de façon à mesurer les conséquences des variations des prix de détail survenues dans les agglomérations en question sur le prix d'un panier constant de biens et de services représentant la consommation d'un groupe représentatif de familles appartenant à ces secteurs.

Le lecteur devra toujours garder en mémoire que ces indices ne sont pas des indicateurs qui permettent de comparer le niveau des prix d'une ville à l'autre et qu'ils n'indiquent en aucune façon si les prix sont plus ou moins élevés dans une ville que dans une autre.

Pour étudier les différences de prix au détail entre les villes, il faut consulter le Tableau 13 de ce bulletin et les notes explicatives qui l'accompagnent.

Les indices chronologiques des prix à la consommation (1969=100) pour Québec et Thunder Bay et les notes explicatives qui les accompagnent peuvent être obtenus de la Section des prix de détail de la Division des prix de Statistique Canada.

Calcul du pouvoir d'achat

Toute variation des prix à la consommation influe directement sur la quantité de biens et de services qu'on peut acheter avec un dollar et par conséquent sur le revenu moyen. Pour mesurer le revenu en tenant compte de la variation des prix à la consommation, on peut déduire du revenu moyen réel le montant proportionnel qui correspond à l'augmentation des prix à la consommation ou ajouter au revenu réel le montant qui équivaut à la diminution des prix à la consommation. Ces moyennes corrigées peuvent ensuite servir à déterminer la quantité de biens et de services qu'on aurait pu acheter grâce à un revenu moyen, les prix à la consommation et les habitudes de consommation n'ayant pas changé. On trouvera ci-dessous des exemples de cette méthode.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B et que dans la même période de temps l'indice des prix à la consommation progresse de 100.0 à 110.0. En raison de l'augmentation de 10 % des prix à la consommation, on n'obtiendra plus autant avec \$1 au cours de la semaine B que pendant la semaine A. De même il serait exagéré de dire que, pour une augmentation de la rémunération de \$80 à \$100 le pouvoir d'achat du salaire hebdomadaire moyen s'est élevé de 25 %. On peut ramener cette augmentation à des proportions plus justes en déduisant du nouveau salaire hebdomadaire moyen l'augmentation des prix à la consommation. La rémunération moyenne corrigée s'établira donc à \$90.91 ($100.00/110.0 \times 100.0$), dont on peut dire qu'elle exprime la rémunération hebdomadaire moyenne de la semaine B en dollars de la semaine A, ou encore qu'elle rend compte du niveau effectif de la rémunération hebdomadaire de la semaine B par rapport à la semaine A.

The foregoing calculation can be carried a step further to express in index number form the relationship between the week A average of \$80.00 and the week B figure of \$90.91. Taking the week A average of \$80.00 as equal to 100.0, the week B index becomes 113.6 (90.91/80.00x100.0). Such an index may be called an index of weekly real wages. It indicates that average wages for week B will buy 13.6% more goods and services than those received in week A, in spite of a 10% rise in consumer prices. This 13.6% increase in real wages compares with the rise of 25% in money wages (100.00/80.00x100.0).

It should be noted that while the estimates of average real wages may reflect the experiences of broad groups of workers fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular income group. Group-spending patterns change over periods of time. To the extent that this occurs, the earnings data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be rendered less valid. Finally, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce savings to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual and real wages uses 1961 as a reference year. However, the adjustment made in the foregoing illustration can be applied to any reference level; percentage change between any two periods will be the same regardless of the reference period selected.

Inter-City Retail Price Comparisons

Statistics relating to differences in retail prices between Canadian cities were initially developed for food, and subsequently extended to cover such other elements of the family budget as clothing, transportation, household operation, health and personal care, recreation and reading, and tobacco and alcohol. In all, inter-city price comparisons are drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based with the major omission being shelter (both rented and owned.) While recognizing the importance of shelter differentials in any overall comparison of the general price level being encountered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require

On peut pousser plus loin les calculs et exprimer à l'aide d'un indice la relation entre le salaire moyen de la semaine A (\$80) et celui de la semaine B (\$90.91). Ainsi, si l'on considère que la rémunération moyenne de \$80 de la semaine A était égale à 100.0, l'indice de la semaine B deviendra 113.6 (90.91/80.00x100.0). On pourrait appeler cet indice l'indice de la rémunération hebdomadaire effective; il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6 % de plus en biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10 % des prix à la consommation. L'augmentation de 25 % des salaires se ramène donc à une augmentation effective de 13.6 % (100.0/80.00x100.0).

Il convient de souligner que, même si les estimations de la rémunération moyenne effective résument assez bien la situation d'un large éventail de travailleurs, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur le revenu porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur le revenu ajustées par l'indice des prix à la consommation (les habitudes de consommation étant "fixes") perdront graduellement de leur valeur. Enfin, il ne faut pas oublier qu'une partie du revenu peut être consacrée à l'épargne et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations du revenu effectif calculées à partir de moyennes du revenu brut peut différer de l'évaluation des variations du pouvoir d'achat du revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de la rémunération effective ne sert pas à mesurer les variations des niveaux de consommation des salariés et de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente la rémunération tant réelle qu'effective prend pour base l'année 1961. Toutefois, les ajustements illustrés dans les exemples ci-dessus peuvent s'appliquer à tout niveau de référence; la variation proportionnelle entre deux périodes sera en effet identique quelle que soit la période de référence choisie.

Comparaisons entre les prix de détail d'une ville à l'autre

A l'origine, la statistique des différences entre les prix de détail d'une ville du Canada à l'autre a été mise au point pour l'alimentation; par la suite, on l'a étendue à d'autres postes du budget familial tels que l'habillement, les transports, l'entretien du ménage, la santé et les soins personnels, les loisirs et la lecture, et le tabac et l'alcool. Au total, les comparaisons d'une ville à l'autre portent sur des biens et des services constituant près des trois quarts du budget servant actuellement à construire l'indice des prix à la consommation au Canada, la seule grande omission étant le logement (location et frais de possession). Sans vouloir nier l'importance des différences en ce qui concerne le logement dans toute comparaison globale du niveau général des prix auxquels les consommateurs doivent faire face dans divers centres urbains, il faut bien dire que les problèmes que comporteraient l'établissement d'une comparaison valable d'une ville à l'autre

further research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

Table 13 presents the results of an updating of earlier spatial retail price measurements to May 1971 and includes more complete data on several cities. A fuller explanation of the study from which this table is derived is contained in the November 1968, November 1969 and April 1972 issues of Prices and Price Indexes (Statistics Canada, Catalogue Number 62-002).

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes. In developing these spatial price comparisons, efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices equalling 100 to facilitate comparisons over the whole range of cities. Except for foodstuffs and new passenger cars for which inter-city price differentials were derived directly from new comparisons based on May 1971 price data, the updating of these measurements of inter-city retail price differentials was accomplished by application of the relative movement of prices, at the item level in each city, over the intervening periods as derived from the relevant city consumer price indexes. These price relationships at the item level were aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns exist among cities, the magnitude of these differences in the cities covered is not such as to affect most of the spatial comparisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-urban retail price differentials, aggregative indexes beyond major budget groupings are not shown.

It should be noted that the retail prices used in these comparisons, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of non-food commodities can be of significance in explaining inter-city price differentials for these items.

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.

sont tels qu'ils nécessitent plus de recherche. Entre-temps, on estime que malgré l'absence actuelle de données sur les dépenses de logement, la publication de comparaisons des prix de détail pour d'autres postes du budget permettra de faire de gros progrès en ce qui concerne la satisfaction des besoins variés des utilisateurs.

On trouvera au Tableau 13 le résultat d'une mise à jour de mesures de prix de détail tirées précédemment jusqu'à mai 1971, ainsi que des données plus complètes sur plusieurs villes. Une explication plus détaillée de l'étude dont le tableau en question est tiré figure dans les livraisons de novembre 1968, novembre 1969, et avril 1972 de Prices and Price Indexes (n° 62-002 au catalogue).

Les premières données de base pour la présente étude ont été constituées par l'importante collection de prix de détail recueillie lors de la confection des indices nationaux et urbains des prix à la consommation. Au moment d'établir ces comparaisons géographiques de prix, on s'est efforcé d'assurer la comparabilité en prenant des biens et des services de qualité égale et en assortissant autant que possible les points de vente au détail par type. Les relations de prix entre paires de villes ont été calculées puis converties à la base commune des prix de Winnipeg = 100 afin de faciliter des comparaisons pour l'ensemble de toutes les villes. Sauf pour les denrées alimentaires et les voitures neuves, pour lesquelles les différences de prix entre villes ont été tirées directement de nouvelles comparaisons fondées sur les données de mai 1971, la mise à jour de ces mesures de différences de prix de détail entre les villes a été assurée grâce à l'extension de mouvement relatifs de prix au niveau de chaque article dans chaque ville aux périodes observées selon le calcul établi à partir de l'indice des prix à la consommation pour la ville en question. Ces relations entre les prix au niveau de l'article ont été agrégées sur la base des habitudes de consommation du citoyen pour l'ensemble du Canada et non pas selon les habitudes de dépenses applicables à des villes individuelles. Même s'il existe des différences dans les habitudes de dépense d'une ville à l'autre, l'importance de ces différences en ce qui concerne les villes dont il est question ici ne sont pas suffisantes pour influencer sensiblement sur la plupart des comparaisons géographiques. Du fait de l'absence des relations de prix en ce qui concerne le logement, dont il a déjà été question ci-dessus et qui pourrait avoir une importance considérable chaque fois que l'on voudrait tirer une comparaison globale entre les différences de prix à la consommation au détail d'une ville à l'autre, on trouvera ici aucun indice synthétique agrégé au-delà des principales composantes du budget.

Il faut remarquer que les prix de détail ayant servi à la présente comparaison sont ceux que doit payer le consommateur et comprennent donc les taxes de vente et les taxes d'accises qui peuvent s'appliquer. Les différences d'une province à l'autre entre les barèmes de taxe de vente imposés sur une grande variété de biens non alimentaires peut avoir une grande importance pour expliquer les différences de prix d'une ville à l'autre pour les articles en question.

Le fait que ces indices aient été exprimés en prenant Winnipeg = 100 ne signifie pas que le choix de Winnipeg comme ville de référence ait une signification particulière et les indices pourraient être exprimés sur la base de n'importe laquelle des villes qui y figurent.

NOTES ON PRICES AND PRICE INDEX NUMBERS

Industry Selling Price Index: Manufacturing (1961=100)

The industry selling price index (Total Manufacturing) moved 0.6 % higher in September to 128.6 from the August index of 127.8. It was 5.0 % higher than the September 1971 index of 122.5. Of the 101 industry indexes included in the Total, 39 were higher, 15 declined and 47 were unchanged.

In terms of the relative contribution to the overall change in the total manufacturing index, the more notable changes were increases recorded in the primary metals group, the wood products group, and the foods and beverages group. The increase in primary metals was due mainly to sharply higher price movements in the smelting and refining industry. The wood products group, continuing the upward trend which began in November of 1971, rose again in September as price increases were registered for all industries in the group. Continuing advances in the foods and beverages group reflected higher prices recorded in the sugar refineries, feed manufacturers, and fish products industries. Declines during the month were relatively insignificant.

August to September Changes in Industry Indexes

Variations de août à septembre des indices dans l'industrie

NOTES SUR LES CHIFFRES DES PRIX ET INDICES DE PRIX

Indice des prix de vente dans l'industrie: Industrie manufacturière (1961=100)

L'indice des prix de vente dans l'industrie pour l'ensemble des industries manufacturières (1961=100) a augmenté de 0.6 %, passant de 127.8 en août à 128.6 en septembre. Il a avancé de 5.0 % par rapport à septembre 1971 (122.5). Sur les 101 indices d'industrie faisant partie du total, 39 ont augmenté, 15 ont baissé et 47 sont restés inchangés.

En fonction de la contribution relative au changement global de l'ensemble des indices des industries manufacturières, les variations les plus importantes ont été les progressions observées dans les groupes de première transformation des métaux, des produits du bois et des aliments et boissons. L'augmentation dans le groupe de première transformation des métaux a eu pour principale cause la brusque hausse des prix dans l'industrie de la fonte et de l'affinage. Le groupe des produits du bois, continuant la tendance à la hausse amorcée en novembre 1971, a de nouveau augmenté en septembre, toutes les industries de ce groupe ont enregistré des hausses de prix. La progression continue observée dans le groupe des aliments et boissons fait suite à la hausse des prix dans les raffineries de sucre, chez les fabricants d'aliments pour animaux et dans l'industrie de transformation du poisson. Les baisses enregistrées au cours du mois ont été pratiquement insignifiantes.

(1) Indexes not available at this level of aggregation. - Indices non disponibles à ce niveau d'agrégation.

General Wholesale Index (1935-39=100)

The general wholesale index moved up 1.1 % in September to 314.0 from the revised August index of 310.6. It was 7.8 % higher than the September 1971 index of 291.4. Four of the eight major group indexes were higher, three declined and the remaining one non-metallic mineral products was unchanged at 234.8.

The non-ferrous metal products group index rose 4.8 % in September to 271.6 from the revised August index of 259.2. An advance of 2.7 % to 252.9 from 246.2 in the vegetable products group index reflected price increases for sugar and its products, livestock and poultry feeds and grains. Higher prices for spruce, cedar and fir were the chief contributors to an increase of 1.2 % in the wood products group index to 443.5 from the revised (August) index of 438.1. The chemical products group index rose fractionally to 245.6 from 245.1.

Three groups declined slightly; animal products to 376.4 from 377.2, textile products to 280.9 from 281.7 and iron products to 323.2 from 323.3.

The following table shows some of the more noteworthy changes:

Commodity group and sub-group Groupe et sous-groupe de produits	Percentage changes - Taux de variation		
	Sept. - 1972 - Sept. August - 1972 - Août	Sept. - 1971 - Sept. August - 1971 - Août	Sept. - 1972 - Sept. Sept. - 1971 - Sept.
Vegetable products group - Produits d'origine végétale			
Grains - Graines	+ 2.7	- 1.4	+ 8.6
Livestock and poultry feeds - Aliments pour bétail et volaille	+ 9.8	- 1.1	+ 15.8
Sugar and its products - Sucre et ses dérivés	+ 9.1	- 4.2	+ 15.9
Vegetables, canned - Légumes, en conserve	+ 8.8	- 3.5	+ 37.6
Fruits, fresh - Fruits frais	+ 4.2	+ 0.8	+ 12.8
Potatoes - Pommes de terre	+ 2.5	+ 3.5	- 1.2
Rubber and its products - Caoutchouc et ses dérivés	- 29.7	- 29.9	+ 36.0
	- 1.7	-	- 0.1
Wood products group - Produits du bois			
Spruce - Épinette	+ 1.2	- 0.4	+ 10.0
Cedar - Bardeaux en cèdre	+ 7.8	- 1.7	+ 36.4
Fir - Pruche	+ 2.1	- 3.1	+ 39.1
	+ 2.1	+ 0.3	+ 7.8

Security Price Indexes (1961=100)

The investors index of common stock prices decreased 1.0 % to 180.4 in September from 182.2 in August. Of the three major groups, industrial eased 0.8 % to 187.3, utilities dropped 1.7 % to 154.5, and finance declined 1.1 % to 185.8. Amongst the thirteen industrial sub-groups, pulp and paper down 6.6 % to 103.0 registered the largest loss, followed by printing and publishing decreasing 5.2 % to 341.8. The largest percentage increase was 4.3 % for construction to 117.8 followed by industrial mines up 4.2 % to 129.1. In utilities, every sub-group registered a loss ranging from 2.6 % to 87.7 for telephone, to 0.5 % for electric power to 123.5. In finance, banks decreased 2.3 % to 130.0, while investment and loan edged 2.5 % to 145.5.

Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros a progressé de 1.1 % en septembre, passant de 310.6 (indice rectifié) en août à 314.0, soit une augmentation de 7.8 % par rapport à septembre 1971 (291.4). Quatre des huit indices de groupe principal ont augmenté, trois ont diminué et le groupe restant des produits minéraux non métalliques est resté inchangé à 234.8.

L'indice du groupe des produits métalliques non ferreux a augmenté de 4.8 % en septembre, passant de 259.2 (indice rectifié) en août à 271.6. L'indice des prix du groupe des produits d'origine végétale a augmenté de 2.7 % pour passer de 246.2 à 252.9 à la suite de la hausse des prix du sucre et de ses dérivés ainsi que des aliments et graines pour le bétail et la volaille. L'indice des prix du groupe des produits du bois a connu une augmentation de 1.2 %, passant de 438.1 en août (indice rectifié) à 443.5, à la suite principalement d'une hausse des prix de l'épinette, des bardeaux en cèdre et de la pruche. L'indice des prix du groupe des produits chimiques a légèrement augmenté pour passer de 245.1 à 245.6.

Trois groupes ont légèrement diminué, à savoir: les produits d'origine animale (de 377.2 à 376.4), les produits textiles (de 281.7 à 280.9) et les produits du fer (de 323.3 à 323.2).

Le tableau ci-dessous fait apparaître quelques uns des changements les plus notables:

Indices des cours des valeurs immobilières (1961=100)

L'indice du cours des actions ordinaires a diminué de 1.0 % d'août (182.2) à septembre (180.4). Parmi les trois grands groupes, les valeurs immobilières ont fléchi de 0.8 % pour se fixer à 187.3, les services publics ont baissé de 1.7 % pour s'établir à 154.5 et les finances ont diminué de 1.1 % pour tomber à 185.8. Parmi les treize sous-groupes industriels, les pâtes et papiers ont baissé de 6.6 % pour se fixer à 103.0 (il s'agit de la baisse la plus importante), suivis par le groupe impression et édition qui a diminué de 5.2 % pour s'inscrire à 341.8. C'est la construction qui a le plus monté (4.3 %) pour se fixer à 117.8, suivie par les mines industrielles qui ont augmenté de 4.2 % pour atteindre 129.1. Pour ce qui est des services d'utilité publique, chacun des sous-groupes a enregistré une baisse allant de 2.6 % pour le téléphone (87.7) à 0.5 % pour l'énergie électrique (123.5). Quant aux finances, les banques ont baissé de 2.3 % pour se fixer à 123.0, tandis que les placements et prêts augmentaient de 2.5 % pour s'établir à 145.5.

In the same period, the index of mining stock prices fell 0.8 % to 115.4 with gold dropping 3.4 % to 121.7 and base metals increasing 0.8 % to 112.9.

Of the two supplementary price indexes, uranium showed a decrease of 2.1 % to 183.3 and primary oils and gas increased 0.4 % to 540.1.

The preferred stock index fell 2.1 % to 71.0 from 72.5 in August.

Thirty Industrial Materials Price Index (1935-39=100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, moved up 0.7 % to 303.1 in September from the August index of 300.9. Prices were higher for eight commodities, lower for eight and unchanged for fourteen. Principal changes included increases for raw sugar, domestic wheat, oats, fir timber, linseed oil, spruce lumber, raw wool and raw rubber while decreases were recorded for raw cotton, steers, cottonseed oil and hogs.

Canadian Farm Products Price Index (1935-39=100)

The price index of Canadian farm products at terminal markets declined 2.8 % to 281.9 in September from the August index of 289.9. A decrease of 2.9 % to 390.2 from 401.8 in the animal products index reflected lower prices for lambs and steers on both Eastern and Western markets, for hogs and raw wool in the East and for calves in the West. Higher prices were shown for eggs on both markets, and for hogs and raw wool in the West. The field products index declined 2.5 % to 173.6 from 178.0 on lower prices for potatoes on the Eastern and Western markets, and for hay in the West. Higher prices were shown for hay, corn and barley in the East and for rye and flax in the West.

Farm Input Price Indexes (1961=100)

The Farm Input Price Index for Canada increased 0.9 % in the 3rd quarter of 1972, moving to 141.5 from a 2nd quarter level of 140.2. This was 4.0 % higher than the 3rd quarter index of 136.0 in 1971. The Eastern index advanced 1.1 % to 141.9 from a 2nd quarter level of 140.4, while the Western index increased 0.8 % moving from 140.0 to 141.1. Higher prices in both regions for building replacement, feeder cattle, feed, monthly rated farm labour, machinery and vehicle operation, and building repairs, had the most effect on the movement of the indexes.

Consumer Price Movements

The Consumer Price Index for Canada (1961=100) rose 0.8 % to 141.3 in August from 140.2 in July. This compares with a rise of 0.7 % between these two months last year but contrasts with smaller July to August increases of recent years. All major components registered advances except Clothing which declined 0.2 %. The major contributor to the rise in the All-Items index was a 2.2 % increase in the Food index. Among the other components that increased, Recreation and Reading rose 0.8 %, Health and Personal Care 0.6 %, Transportation 0.5 %, Housing 0.3 %, and Tobacco and Alcohol 0.1 %. Between August 1971 and August 1972, the All-Items index advanced 4.7 %.

Au cours de la même période, l'indice des titres miniers a baissé de 0.8 % pour s'inscrire à 115.4, les aurifères diminuant de 3.4 % pour se fixer à 121.7 et les métaux communs augmentant de 0.8 % pour s'établir à 112.9.

Pour ce qui est des deux indices supplémentaires, l'uranium a diminué de 2.1 % pour atteindre 183.3 et le pétrole et les gaz primaires ont avancé de 0.4 % pour se fixer à 540.1.

L'indice des actions privilégiées a baissé de 2.1 %, tombant de 72.5 en août à 71.0 en septembre.

Indice des prix de trente matières industrielles (1935-39=100)

L'indice des prix de trente matières industrielles, calculé comme moyenne géométrique non pondérée, a augmenté de 0.7 % pour passer de 300.9 en août à 303.1 en septembre. Les prix de huit marchandises ont augmenté, ceux de huit ont diminué et ceux de quatorze autres sont restés inchangés. Les principaux changements ont été des augmentations pour le sucre brut, le blé canadien, l'avoine, le sapin de charpente, l'huile de lin, le bois d'épinette pour la construction, la laine brute et le caoutchouc brut ainsi que des diminutions pour le coton brut, les bœufs, les porcs, l'huile de coton et les porcs.

Indice des prix des produits agricoles canadiens (1935-39=100)

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a diminué de 2.8 %, passant de 289.9 en août à 281.9 en septembre. La diminution de 2.9 % de l'indice des prix des produits d'origine animale, qui tombe de 401.8 à 390.2, est la conséquence de la baisse des prix des agneaux et des bœufs sur les marchés de l'Est et de l'Ouest, des porcs et de la laine brute dans l'Est et des veaux dans l'Ouest. On a observé une augmentation des prix des oeufs sur les deux marchés, et des porcs et de la laine brute dans l'Ouest. La baisse de 2.5 % de l'indice des produits de grande culture, qui tombe de 178.0 à 173.6, est la conséquence d'une diminution des prix des pommes de terre dans l'Est et dans l'Ouest, et du foin dans l'Ouest. On a observé une augmentation des prix du foin, du maïs et de l'orge dans l'Est, et du seigle et du lin dans l'Ouest.

Indice de prix des entrées dans l'agriculture (1961=100)

L'indice des prix des entrées dans l'agriculture au Canada a progressé de 0.9 % au cours du 3^e trimestre de 1972, passant de 140.2 (2^e trimestre) à 141.5, ce qui représente une augmentation de 4.0 % par rapport au 3^e trimestre de 1971 (136.0). L'indice de l'Est a augmenté de 1.1 % pour passer de 140.4 (2^e trimestre) à 141.9, tandis que l'indice de l'Ouest progressait de 0.8 % et passait de 140.0 à 141.1. La hausse des prix, dans les deux régions, pour le remplacement de bâtiments, les bovins d'engraissement, les aliments pour animaux, la main-d'œuvre agricole au mois, l'exploitation de machines et de véhicules ainsi que la réparation de bâtiments a eu un effet important sur les mouvements des indices.

Mouvements des prix à la consommation

L'indice des prix à la consommation pour le Canada (1961=100) est passé de 140.2 en juillet à 141.3 en août; cette augmentation de 0.8 % est comparable à la hausse de 0.7 % enregistrée entre les deux mois correspondants de l'année dernière, mais elle est plus importante que l'augmentation enregistrée entre juillet et août ces dernières années. L'indice de tous les principaux éléments a progressé sauf celui de l'habillement qui a diminué de 0.2 %. Le principal facteur d'accroissement de l'indice synthétique a été l'augmentation de 2.2 % de l'indice de l'alimentation. Les autres indices qui ont enregistré une avance sont les suivants: loisirs et lecture, 0.8 %; soins personnels et de santé, 0.6 %; transports, 0.5 %; habitation, 0.3 %; tabacs et alcools, 0.1 %. Entre août 1971 et août 1972, l'indice synthétique a progressé de 4.7 %.

Consumer price movements

The Consumer Price Index for Canada (1961=100) rose 0.4 % to 141.8 in September from 141.3 in August. This increase contrasts with declines of 0.2 % between these two months in each of the preceding three years. Advances of 0.7 % and 0.8 % in the Food and Clothing indexes, respectively, were mainly responsible for this increase although the Housing component rose 0.2 % and Transportation edged up 0.1 % between August and September. On the other hand, the Recreation and Reading index dipped 0.2 % and the Health and Personal Care and the Tobacco and Alcohol components remained unchanged. Between September 1971 and September 1972, the All-Items Index advanced 5.3 %, the largest advance for any twelve month period in recent years.

The Food index rose 0.7 % to 146.7 in September from 145.7 in August, contrasting with decreases that have usually occurred between these two months in recent years. In the latest month restaurant meal prices advanced 1.2 % as increases were recorded in a number of cities across the country. The level of prices for food consumed at home rose 0.6 % with all major components, except vegetables, contributing to the advance. Vegetable prices fell, on average, 8.5 %, which is less than normally experienced at this time of year, with lower quotations on most fresh vegetables outweighing increases on some canned and frozen items. In contrast to the declines in the level of fruit prices that have usually occurred between August and September in recent years, this September fruit prices rose 1.1 % as most fresh, canned, frozen and dried fruits recorded advances. Over the twelve month period since September 1971, vegetable prices rose over 15 % whereas fruit prices increased less than 6 %. The meat, fish and poultry index was 1.1 % higher in the latest month. Pork and beef rose 2.3 % and 0.6 % respectively, with most cuts contributing to the advance. Poultry prices, however, declined marginally due to lower quotations for turkey. Since September 1971, the meat, fish and poultry index rose almost 15 % with pork prices advancing, on average, over 26 %. In the latest month, egg quotations climbed 4.1 % to reach a level over 15 % above that of a year previous. The bakery and cereal products index increased 0.5 % between August and September as higher prices were recorded for such items as corn flakes, macaroni, and biscuits. Small price increases were registered for fluid milk and for most other dairy products, but butter prices declined marginally as special prices took effect in Toronto and Vancouver. In the latest month, price advances of 7.4 % and 4.7 % were registered for ground and instant coffee, respectively, while sugar prices also moved up nearly 5 %. Higher quotations were also recorded for infants' food, jelly powder and honey. In the twelve months to September 1972, the Food index advanced 9.7 %, the largest advance for any twelve month period since well before 1961. During the past year, the price of food consumed at home rose 10.2 % and that for restaurant meals 13.3 %.

The Housing index rose 0.2 % to 144.1 in September from 143.8 in August as a result of increases of 0.2 % in both the shelter and household operation components. Within shelter, the homeownership element rose 0.2 % because of increases in the indexes for new houses and for repairs; rents also rose 0.2 %. The major contributors to the rise in the household operation component are household supplies, which advanced in price, on average, 1.5 % mainly because of generally increased quotations for cleansers, soap flakes and detergents. Furniture prices rose 0.4 % because of scattered increases for all items surveyed. On the other hand,

Mouvements des prix à la consommation

L'indice des prix à la consommation au Canada (1961 = 100) a augmenté de 0.4 %; il est passé de 141.3 en août à 141.8 en septembre. Cette progression est en contraste avec la baisse de 0.2 % observée entre ces deux mois au cours des trois dernières années. L'augmentation de 0.7 % de l'indice de l'alimentation et de 0.8 % de celui de l'habillement est principalement responsable de cette progression, bien que l'indice de l'habitation ait augmenté de 0.2 %, et celui des transports de 0.1 %, entre août et septembre. Par contre, l'indice des loisirs et de la lecture a baissé de 0.2 %, et les indices des soins personnels et de santé et des tabacs et alcools sont restés inchangés. Entre septembre 1971 et septembre 1972, l'indice synthétique a progressé de 5.3 %; il s'agit de la plus forte augmentation pour une période de douze mois au cours des dernières années.

L'indice de l'alimentation a progressé de 0.7 %, pour atteindre 146.7 en septembre, contre 145.7 en août. Cette progression contraste avec la diminution qui a été habituellement constatée entre ces deux mois au cours des dernières années. Au cours du dernier mois, le prix des repas pris au restaurant a progressé de 1.2 %; on a enregistré des augmentations dans un certain nombre de villes du pays. Le prix des aliments consommés à la maison a augmenté de 0.6 %; tous les aliments ont augmenté, à l'exception des légumes. Le prix des légumes a baissé en moyenne de 8.5 %, baisse inférieure à celle habituellement constatée à cette époque de l'année. La baisse des prix de la plupart des légumes frais a pesé plus lourd que les augmentations de certains produits en conserve et congelés. Contrairement à la baisse des prix des fruits qui a été habituellement observée entre août et septembre au cours des dernières années, les prix des fruits ont augmenté de 1.1 % en septembre; on a en effet observé des augmentations pour la plupart des fruits frais, en conserve, congelés et secs. Au cours de la période de 12 mois écoulée depuis septembre 1971, les prix des légumes ont augmenté de plus de 15 % tandis que les prix des fruits ont augmenté de moins de 6 %. L'indice de la viande, du poisson et de la volaille a augmenté de 1.1 % en septembre. Le porc a augmenté de 2.3 % et le bœuf, de 0.6 %; la plupart des morceaux ont contribué à cette augmentation. Par contre, la volaille a baissé légèrement, à la suite d'une baisse du prix de la dinde. Depuis septembre 1971, l'indice de la viande, du poisson et de la volaille a augmenté de près de 15 %; les prix du porc ont augmenté, pour leur part, de plus de 26 % en moyenne. Le mois dernier, le prix des oeufs a grimpé de 4.1 % pour se fixer à un niveau supérieur de plus de 15 % à celui enregistré un an plus tôt. L'indice des produits de boulangerie et des céréales a progressé de 0.5 % entre août et septembre; on a observé une hausse du prix de produits tels que les flocons de maïs, le macaroni et les biscuits. On a constaté de légères hausses du prix du lait nature et de la plupart des autres produits laitiers; par contre le prix du beurre a légèrement baissé, car des prix spéciaux ont été introduits à Toronto et Vancouver. Le mois dernier, on a observé des augmentations de 7.4 % pour le café moulu et de 4.7 % pour le café instantané, tandis que le prix du sucre augmentait pour sa part de 5 %. On a constaté également une hausse des prix des aliments pour bébés, de la gelée en poudre et du miel. Au cours de la période de douze mois qui s'est terminée en septembre 1972, l'indice des prix à l'alimentation a progressé de 9.7 %, ce qui constitue la plus forte progression pour une période de douze mois depuis bien avant 1961. Au cours de l'année dernière, le prix des aliments consommés à la maison a augmenté de 10.2 %, et celui des repas pris au restaurant, de 13.3 %.

L'indice de l'habitation a progressé de 0.2 %; il est passé de 143.8 en août à 144.1 en septembre par suite d'une augmentation de 0.2 % des frais de logement et d'entretien du ménage. Dans le cas du logement, l'élément frais de possession d'une maison s'est accru de 0.2 % en raison d'une hausse du prix des maisons neuves et des frais de réparation; on a enregistré également une augmentation de 0.2 % des loyers. Les principaux éléments qui ont contribué à faire monter l'indice de l'entretien du ménage ont été les fournitures de ménage dont le prix a augmenté en moyenne de 1.5 %, principalement à cause d'une hausse générale du prix des nettoyeurs, du savon en flocons et des détersifs. Les prix des meubles

appliance prices declined 0.5 % with decreases for such items as refrigerators, electric stoves and vacuum cleaners; however, gas stove and electric iron quotations were higher. The floor coverings index fell 0.9 % because of scattered sales on carpets. Quotations for dishes and glass stemware continued to rise in the latest month, reaching levels 12 % above those of September 1971. In the twelve months to September 1972, the Housing index advanced 4.6 %.

The Clothing index, which normally moves up in September, advanced 0.8 % to 132.4 from its level of 131.3 in August. Footwear prices increased 2.0 % in the latest month with higher quotations for all items surveyed; in the twelve months since September 1971, footwear prices have advanced 5.1 %. Clothing service charges also moved up in the latest month because of generally higher charges for dry cleaning, laundry, and shoe repair. An advance of 0.6 % in the men's wear index resulted from higher prices for a number of outer-garments including suits, slacks and topcoats, though scattered sales reduced the price of socks and underwear. The women's wear index moved up 0.5 % mainly in response to higher prices for winter coats in a number of cities, though pyjamas and dresses, among other items, were also higher in price. On the other hand, a number of women's garments, including hosiery and underclothes, recorded lower prices due to sales. The children's wear component edged up 0.1 % with increased quotations for boy's slacks and girls' cotton dresses, while piece goods dipped 0.3 % reflecting sales on cotton and woollen materials. Between September 1971 and September 1972, the Clothing index rose 2.2 % to exhibit the smallest twelve month increase of the seven major component of the All-Items Index.

The Transportation index edged up 0.1 % to 134.4 in September from 134.3 in August as a marginal increase in the automobile operation component outweighed a seasonal decline in the train fares index. The rise in the automobile operation element mainly resulted from general increases in most mechanical and body repair items; batteries also rose in price. On the other hand, tire prices were generally lower and gasoline quotations edged down to a level only marginally higher than in September 1971. In the twelve months to September 1972, the Transportation index rose 2.6 %.

In September 1972 the Health and Personal Care index remained unchanged from its August 1972 level of 150.0 and stood 5.2 % above its September 1971 mark. In the latest month scattered sales for toilet soap, cleansing tissues and toothpaste contrasted with upward movements in the prices of shaving cream and razor blades.

The Recreation and Reading index dipped 0.2 % to 140.2 in September from 140.5 in August as increased magazine prices were outweighed by a 0.4 % decrease in the recreation element. The decrease for recreation resulted from scattered price reductions for television sets and stereo combinations which outweighed higher quotations for phonograph records and television repairs. In the twelve months to September 1972, the Recreation and Reading index rose 3.1 %.

In September 1972, the Tobacco and Alcohol index was unchanged from its August level of 132.9 and stood 2.5 % above its September 1971 level.

ont augmenté de 0.4 % en raison de hausses enregistrées ici et là sur tous les articles de l'enquête. Par contre, le prix des appareils ménagers a diminué de 0.5 % en particulier en ce qui concerne les réfrigérateurs, les cuisinières électriques et les aspirateurs; toutefois, le prix des cuisinières à gaz et des fers électriques a été majoré. L'élément revêtements de sol a baissé de 0.9 % en raison des divers soldes de tapis. Le prix de la vaisselle et de la verrerie a continué de monter le mois dernier et a atteint un niveau supérieur de 12 % à celui de septembre 1971. Au cours des douze mois précédant septembre 1972, l'indice de l'habitation a progressé de 4.6 %.

L'indice de l'habillement, qui normalement augmente en septembre, a enregistré une hausse de 0.8 %, passant à 132.4, comparativement à 131.3 en août. En septembre, le prix des chaussures s'est accru de 2.0 % en raison d'une hausse sur tous les articles composant l'indice; au cours des douze mois écoulés depuis septembre 1971, les prix des chaussures ont augmenté de 5.1 %. Les frais d'entretien de l'habillement se sont également accrues le mois dernier par suite d'une hausse générale des frais de nettoyage à sec, de lavage et de réparation de chaussures. L'accroissement de 0.6 % de l'indice des vêtements pour hommes est attribuable à une augmentation du prix de certains vêtements de dessus dont les complets, les pantalons, les pardessus, malgré une réduction du prix des chaussettes et des sous-vêtements, vendus en solde en divers endroits. L'indice des vêtements pour dames a progressé de 0.5 % par suite surtout d'une hausse du prix des manteaux d'hiver dans un certain nombre de villes, et aussi d'une augmentation de prix d'articles tels que les pyjamas et les robes. Par ailleurs, pour certains vêtements pour dames, parmi lesquels les bas et les sous-vêtements, on a enregistré une baisse de prix à la suite de soldes. L'élément vêtements pour enfants a progressé de 0.1 %, la hausse de prix ayant touché les pantalons pour garçons et les robes de coton pour fillettes, tandis que pour le tissu à la verge on a enregistré une diminution de prix de 0.3 % à la suite de soldes de tissu de coton et des lainages. Entre septembre 1971 et septembre 1972, l'indice de l'habillement a progressé de 2.2 %; c'est l'élément qui a enregistré le plus faible accroissement en douze mois parmi les sept principaux éléments qui composent l'indice général.

L'indice des transports s'est accru de 0.1 %, passant de 134.3 en août à 134.4 en septembre; la hausse légère des frais d'entretien de voiture a été plus forte que la baisse saisonnière des billets de chemin de fer. L'accroissement de l'élément entretien de la voiture provient principalement de l'augmentation générale des frais de la plupart des réparations mécaniques et de carrosserie; le prix des batteries a également augmenté. Par contre, le prix des pneus a diminué en général, et celui de l'essence est redescendu à un niveau très légèrement supérieur à celui de septembre 1971. Au cours des douze mois précédant septembre 1972, l'indice des transports a progressé de 2.6 %.

En septembre 1972, l'indice des soins personnels et de la santé n'a pas changé par rapport au mois précédent; il est demeuré de 150.0, soit supérieur de 5.2 % à celui de septembre 1971. Au cours de ce mois, le savon de toilette, le papier de démaquillage et la pâte dentifrice ont été soldés en divers endroits; par contre le prix de la crème à raser et des lames de rasoir a subi une hausse.

L'indice des loisirs et de la lecture a diminué de 0.2 % passant de 140.5 en août à 140.2 en septembre, du fait qu'une réduction de 0.4 % dans l'élément des loisirs a pesé plus lourd que l'augmentation du prix des revues. Cette diminution dans les loisirs est attribuable à la baisse générale du prix des téléviseurs et des appareils stéréo qui a pesé plus lourd que la hausse du prix des disques et des frais de réparation des téléviseurs. De septembre 1971 à septembre 1972, l'indice des loisirs et de la lecture a progressé de 3.1 %.

En septembre 1972, l'indice des tabacs et alcools est demeuré stationnaire, c'est-à-dire qu'il est demeuré au niveau de 132.9 atteint en août, soit de 2.5 % supérieur à celui de septembre 1971.

Consumer price index items, when classified by commodities and services, offer another view of the incidence of the change in prices. Between August and September, the services index rose 0.2 % because of higher charges for automobile repairs and lubrication, television repairs, shoe repairs, dry cleaning and laundry, together with increased rents. The total commodities index rose 0.4 % mainly because of the 0.7 % advance in food prices, though the index for non-durables excluding food rose 0.4 % as a result of higher quotations for clothing, household cleaning supplies and phonograph records. On the other hand, durables decreased 0.3 % as reductions for appliances, some entertainment equipment, carpets, and automobile tires outweighed higher prices for furniture, dishes, glass stemware and automobile batteries. Between September 1971 and September 1972, the index for services advanced 5.4 % while that for total commodities increased 5.2 %.

Si classé selon les produits et les services, les éléments de l'indice des prix à la consommation permettent d'illustrer un autre aspect de la variation des prix. D'août à septembre, l'indice des services s'est accru de 0.2 % par suite d'une augmentation des frais de réparation et de graissage des automobiles, de réparation des téléviseurs, et des chaussures, de nettoyage à sec et de blanchissage, ainsi que de la hausse des loyers. L'indice général des produits a progressé de 0.4 %, à cause surtout de la majoration de 0.7 % du prix des aliments; bien que l'indice des biens non durables, à l'exception de l'alimentation, ait augmenté de 0.4 % en raison de la hausse du prix des vêtements, des produits ménagers de nettoyage et des disques. Par ailleurs, les biens durables ont décliné de 0.3 % du fait qu'une réduction du prix des appareils ménagers, des appareils destinés aux loisirs à domicile, des tapis et des pneus d'automobiles l'a emporté sur la hausse du prix des meubles, de la vaisselle, des articles de verrerie et des batteries de voitures. Entre septembre 1971 et septembre 1972, l'indice des services a progressé de 5.4 %, tandis que l'indice de l'ensemble des produits s'est accru de 5.2 %.

TABLE 1. Summary of Current Price Indexes

TABLEAU 1. Récapitulation des indices des prix courants

	Indexes — Indices				Percentage changes — Variation proportionnelle		
	September 1972 Septembre	August 1972 Août	September 1971 Septembre	August 1971 Août	Sept. 1972 Aug. 1972	Sept. 1971 Aug. 1971	Sept. 1972 Sept. 1971
	Sept. 1972 Août 1972	Sept. 1971 Août 1971	Sept. 1972 Sept. 1971	Sept. 1972 Sept. 1971	Sept. 1972 Sept. 1971	Sept. 1972 Sept. 1971	Sept. 1972 Sept. 1971
Industrial price indexes — Indices des prix dans l'industrie							
Industry selling price index: manufacturing — 1961=100(1) — Indices des prix de vente dans l'industrie: industries manufacturières:							
General wholesale index — (1935-39=100)(2) — L'indice général de gros	128.6	127.8	122.5	122.4	+ 0.6	+ 0.1	+ 5.0
Vegetable products — Substances végétales	314.0	310.6 [†]	291.4	292.3	+ 1.1	— 0.3	+ 7.8
Animal products — Produits animaux	252.9	246.2	232.8	236.0	+ 2.7	— 1.4	+ 8.6
Textile products — Produits textiles	376.4	377.2 [†]	330.6	328.1	— 0.2	+ 0.8	+ 13.9
Wood products — Produits du bois	280.9	281.7 [†]	262.6	263.5	— 0.3	— 0.3	+ 7.0
Iron products — Produits du fer	443.5	438.1 [†]	403.0	404.7	+ 1.2	— 0.4	+ 10.0
Non-ferrous metals — Métaux non ferreux	323.2	323.3	318.1	317.8	—	+ 0.1	+ 1.6
Non-metallic minerals — Minéraux non métalliques	271.6	259.2 [†]	260.3	262.3	+ 4.8	— 0.8	+ 4.3
Chemical products — Produits chimiques	234.8	234.8	227.1	226.7	—	+ 0.2	+ 3.4
	245.6	245.1 [†]	238.9	240.8	+ 0.2	— 0.8	+ 2.8
Canadian farm products — (1935-39=100)(3) — Produits agricoles canadiens							
Eastern — Total — De l'est	281.9	289.9	262.2	264.6	— 2.8	— 0.9	(3)
Western — Total — De l'ouest	317.1	329.1	292.1	297.8	— 3.6	— 1.9	+ 8.6
Field — Cultures	246.7	250.7	232.3	231.4	— 1.6	+ 0.4	(3)
Animal — Animaux	173.6	178.0	169.2	177.2	— 2.5	— 4.5	(3)
	390.2	401.8	355.1	352.0	— 2.9	+ 0.9	+ 9.9
Selected price indexes — (2) — Certains indices de prix							
Thirty industrial materials — (1935-39=100) — Trente matériaux industriels	303.1	300.9	265.6	266.8	+ 0.7	— 0.4	+ 14.1
Residential building materials — (1961=100) — Matériaux de construction résidentielle	166.3	162.5	149.2	149.6	+ 2.3	— 0.3	+ 11.5
Non-residential building materials — (1961=100) — Maté- riaux de construction non résidentielle	144.0	143.0	136.0	135.8	+ 0.7	+ 0.1	+ 5.9
Consumer price indexes — (1961=100) — Indices des prix à la consommation							
All-items — Tous les éléments	141.8	141.3	134.7	135.0	+ 0.4	— 0.2	+ 5.3
Food — Alimentation	146.7	145.7	133.7	135.9	+ 0.7	— 1.6	+ 9.7
Housing — Habitation	144.1	143.8	137.7	137.5	+ 0.2	+ 0.1	+ 4.6
Clothing — Habillement	132.4	131.3	129.6	128.8	+ 0.8	+ 0.6	+ 2.2
Transportation — Transports	134.4	134.3	131.0	130.7	+ 0.1	+ 0.2	+ 2.6
Health and personal care — Soins personnels et de santé	150.0	150.0	142.6	142.5	—	+ 0.1	+ 5.2
Recreation and reading — Loisirs et lectures	140.2	140.5	136.0	135.8	— 0.2	+ 0.1	+ 3.1
Tobacco and alcohol — Tabacs et alcools	132.9	132.9	129.6	129.6	—	—	+ 2.5
Security price indexes — (1961=100) — Indices des cours des valeurs mobilières							
Investors index — Total — Indices des portefeuillistes	180.4	182.2	149.4	148.2	— 1.0	+ 0.8	+ 20.7
Industrials — Total — Industriels	187.3	188.8	151.7	151.0	— 0.8	+ 0.5	+ 23.5
Industrial mines — Mines industrielles	129.1	123.9	121.1	120.3	+ 4.2	+ 0.7	+ 6.6
Foods — Aliments	149.1	150.8	129.1	131.6	— 1.1	— 1.9	+ 15.5
Beverages — Boissons gazeuses	247.0	252.5	191.6	190.4	— 2.2	+ 0.6	+ 28.9
Textiles and clothing — Textiles et vêtements	177.9	184.5	114.4	112.8	— 3.6	+ 1.4	+ 55.5
Pulp and paper — Pâte et papier	103.0	110.3	89.3	92.2	— 6.6	— 3.1	+ 15.3
Printing and publishing — Impression et édition	341.8	360.5	248.1	249.0	— 5.2	— 0.4	+ 37.8
Primary metals — Métaux primaires	113.6	113.7	88.2	90.8	— 0.1	— 2.9	+ 28.8
Metal fabricating — Fabrications des métaux	198.0	201.0	165.4	161.2	— 1.5	+ 2.6	+ 19.7
Non-metallic minerals — Minéraux non métalliques	177.0	175.7	141.5	140.4	+ 0.7	+ 0.8	+ 25.1
Petroleum — Pétrole	310.4	311.5	237.9	231.4	— 0.4	+ 2.8	+ 30.5
Chemicals — Produits chimiques	114.6	115.5	86.0	93.5	— 0.8	— 8.0	+ 33.3
Construction — Construction	117.8	112.9	56.4	62.2	+ 4.3	— 9.3	+ 108.9
Retail trade — Commerce de détail	168.2	172.2	135.4	132.3	— 2.3	+ 2.3	+ 24.2
Utilities — Total — Services publics	154.5	157.1	146.5	145.8	— 1.7	+ 0.5	+ 5.5
Pipeline — Pipe-line	185.7	188.7	170.5	168.8	— 1.6	+ 1.0	+ 8.9
Transportation — Transport	311.6	317.1	255.2	247.3	— 1.7	+ 3.2	+ 22.1
Telephone — Téléphone	87.7	90.0	91.8	93.2	— 2.6	— 1.5	— 4.5
Electric power — Énergie électrique	123.5	124.1	116.0	116.6	— 0.5	— 0.5	+ 6.5
Gas distribution — Distribution du gaz	187.4	190.5	217.9	218.8	— 1.6	— 0.4	+ 14.0
Finance — Total — Finances	185.8	187.8	144.9	140.8	— 1.1	+ 2.9	+ 28.2
Banks — Banques	213.0	218.0	169.6	164.4	— 2.3	+ 3.2	+ 25.6
Investment and loan — Placements et prêts	145.5	142.0	106.8	104.4	+ 2.5	+ 2.3	+ 36.2
Mining stocks — Actions minier							
General index — Indice général	115.4	116.3	103.5	107.1	— 0.8	— 3.4	+ 11.5
Gold — Or	121.7	126.0	95.3	101.3	— 3.4	— 5.9	+ 27.7
Base metals — Métaux communs	112.9	112.0	108.9	111.2	+ 0.8	— 2.1	+ 3.7
Supplementary indexes — Indices supplémentaires							
Uranium — L'uranium	183.3	187.2	142.7	144.0	— 2.1	— 0.9	+ 28.5
Primary oils and gas — Pétrole et gaz primaires	540.1	537.9	481.8	480.7	+ 0.4	+ 0.2	+ 12.1

1) Gross weighted, including inter-industry shipments. For explanation see page 82. — Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication, voir page 82.

2) Indexes for 1972 are subject to revision. — Les indices pour 1972 sont sujets à révision.

3) Year to year percentage change not shown since these indexes are not comparable. Indexes subsequent to July 1971 are subject to revision. See notes page 76 for details of Western grain prices. — La variation proportionnelle d'une année à l'autre n'est pas indiquée étant donné que ces indices ne sont pas comparables. Les indices postérieurs à juillet 1971 sont sujets à révision. Voir les renvois de la page 76 pour les prix détaillés des grains de l'Ouest.

(1) Indexes for 1972 are subject to revision. - Les indices pour 1972 sont sujets à révision.

(2) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. - Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels:

	Old Series - Ancienne série	New series - Nouvelle série
December - 1970 - Décembre	95.1	92.3
January - 1971 - Janvier	95.1	92.1
Average - 1971 - Moyenne	95.2	91.8

(4) Includes television and radio. — Téléviseur et radio.

(5) Excludes houses, mortgage interest and property taxes. — Excluant les maisons, les intérêts hypothécaires et les taxes foncières.

TABLE 10. Consumer Price Indexes for Canada - Selected Food Items

TABEAU 10. Indices des prix à la consommation pour le Canada - Denrées alimentaires choisies

(1961=100)

	Sept. 1972 Sept.	Aug. 1972 Août	Sept. 1971 Sept.	Aug. 1971 Août	1971	1970	1969
Dairy products - Produits laitiers							
Milk, fresh - Lait frais	152.2	152.1	148.3	146.7	145.1	138.9	137.1
Milk, evaporated - Lait évaporé	137.1	136.9	121.3	121.1	119.6	112.5	112.9
Powdered skim milk - Poudre de lait écrémé	162.7	161.2	144.9	144.1	139.9	130.3	128.3
Butter, creamery, first grade - Beurre de crèmerie 1 ^{re} qualité	108.8	108.9	107.4	103.4	104.0	102.3	103.0
Cheese, plain, processed - Fromage ordinaire fondu	148.0	147.9	137.0	133.8	133.4	130.3	127.9
Poultry and eggs - Volaille et oeufs							
Chicken, grade A evisc. - Poulet, qualité A, évis- céré	130.6	129.8	119.4	118.7	112.0	107.7	111.2
Turkey, grade A evisc. - Dinde, qualité A, éviscérée	104.2	110.0	94.8	96.9	95.8	99.1	101.6
Eggs, fresh, grade A large - Oeufs frais, qualité A gros	106.5	102.3	92.1	83.9	87.3	99.0	109.9
Eggs, fresh, grade A medium - Oeufs frais, qualité A moyens	107.7	102.8	84.7	81.5	86.8	98.6	114.1
Beef - Boeuf							
Sirloin steak - Bifteck de faux filet	161.1	162.5	150.9	152.7	143.4	139.7	139.3
Round steak - Bifteck dans la ronde	161.3	159.7	147.3	149.9	148.0	143.7	135.6
Prime rib roast(1) - Rôti de plat de côtes(1)	160.4	159.6	140.9	143.7	139.9	134.4	133.5
Blade roast(2) - Rôti de haut-côté(2)	151.4	151.1	130.6	130.5	133.1	133.5	131.8
Stewing beef - Boeuf pour ragoût	159.9	159.4	146.7	146.8	145.9	142.1	138.3
Hamburg - Boeuf haché	178.2	173.7	150.6	149.6	148.5	144.8	138.8
Liver, sliced - Foie en tranches	140.7	140.5	121.1	120.0	119.1	132.3	115.3
Pork - Porc							
Rib chops, fresh - Côtelettes fraîches	166.4	161.5	132.7	125.8	122.7	137.2	140.8
Shoulder roast, Boston butt, fresh - Rôti dans l'épaule, soc de Boston, frais	136.1	132.7	105.8	102.6	102.4	120.5	129.9
Sausage, pure pork - Saucisse pur porc	136.0	134.8	119.9	119.3	119.6	127.2	127.4
Bacon, side, fancy, sliced, rind off - Bacon, flanc, de fantaisie, en tranches, sans couenne	110.6	107.9	75.4	74.0	76.4	102.2	101.1(6)
Ham, smoked, boneless(3) - Jambon fumé, désossé(3)	145.9	140.9	118.7	112.0	115.4	135.2	138.4
Other meats - Autres viandes							
Lamb, leg roast - Agneau, gigot	126.0	120.5	115.3	117.6	113.7	114.8	109.1
Veal, loin chops, rib end - Veau, côtelettes, bout de côte	197.8	194.0	166.9	165.5	165.0	162.6	151.5
Wieners or frankfurters - Saucisses de Francfort ...	128.5	129.6	120.2	121.3	119.0	121.5	120.1
Meat loaf, canned, mainly pork - Pain de viande, en conserves, principalement de porc	125.1	122.0	121.7	121.1	123.0	130.7	125.0
Fish - Poisson							
Cod filets, frozen(5) - Filets de morue, conge- lés(5)	225.2	221.8	166.4	164.3	160.6	143.3	135.4
Salmon, canned, fancy pink - Saumon, en boîte, de fantaisie, rose	150.4	146.9	146.4	144.3	143.0	144.1	129.9
Fats and oils - Huiles et corps gras							
Margarine	109.4	109.1	111.9	112.2	114.8	112.1	105.5
Lard, pure - Saindoux pur	119.0	118.4	110.8	108.2	111.4	118.7	103.6
Shortening	122.8	123.3	121.2	119.9	118.7	114.1	109.4
Salad dressing - Vinaigrette	110.0	108.6	105.5	106.9	105.4	104.7	102.7
Cereals and bakery products - Céréales et produits de la boulangerie							
Flour, white, all purpose - Farine blanche, tout usage	136.1	135.6	133.2	132.1	131.3	133.5	134.3
Corn flakes - Flocons de maïs	126.3	123.1	121.8	123.6	119.6	117.4	116.2(7)
Macaroni - Macaronis secs	128.5	126.9	126.8	126.7	126.0	126.4	119.4
Cake mix, white - Mélange à gâteaux, blanc	125.6	126.5	122.5	121.9	118.5	122.1	123.5
Bread, plain, white, wrapped, sliced - Pain blanc uni, enveloppé, coupé	138.1	137.9	131.8	132.9	130.5	125.5	123.8
Soda crackers - Craquelins	119.8	118.8	116.5	116.2	113.1	117.9	116.3
Sugar and sweets - Sucre							
Sugar, granulated - Sucre cristallisé	156.5	149.4	127.2	127.6	126.9	117.2	113.0
Jam, strawberry(4) - Confiture de fraises(4)	126.5	125.8	121.5	123.0	122.7	126.4	120.8
Honey, No. 1, white - Miel n° 1, blanc	174.4	167.9	127.9	127.5	127.0	127.8	125.4

TABLE 10. Consumer Price Indexes for Canada - Selected Food Items - Concluded

TABLEAU 10. Indices des prix à la consommation pour le Canada - Denrées alimentaires choisies - fin

(1961=100)

	Sept. 1972 Sept.	Aug. 1972 Août	Sept. 1971 Sept.	Aug. 1971 Août	1971	1970	1969
Fruits							
Oranges, Californian, medium size (138) - Oranges de Californie, moyennes (138)	107.5	103.3	111.3	110.8	111.9	102.5	100.5
Grapefruit, white, 48's - Pamplemousses blancs, 48	174.6	184.5	194.9	198.0	154.8	140.9	122.3
Bananas, yellow - Bananes jaunes	81.5	72.8	77.5	82.3	76.2	85.7	90.7
Apples, volume seller - Pommes du type le plus vendu	159.9	154.1	143.8	154.5	118.8	112.8	128.0
Strawberries, frozen, fancy - Fraises congelées de fantaisie	127.0	122.2	121.7	122.6	121.6	127.6	122.9
Orange juice, conc., frozen, fancy - Jus d'orange concentré et congelé, de fantaisie	107.1	106.5	105.3	102.1	99.3	101.1	106.9
Apple juice, choice - Jus de pomme de choix	121.6	119.6	102.4	101.7	101.4	107.6	113.0(8)
Orange juice, unsweetened - Jus d'orange non sucré	115.4	113.7	112.7	110.9	108.9	108.6	109.5
Pears, canned, choice - Poires en conserve de choix	124.1	124.1	123.1	122.1	120.7	123.7	121.4
Peaches, canned, choice, halves - Pêches en conserve, de choix, moitiés	141.2	140.6	137.6	137.3	135.5	139.0	140.4
Pineapple, Hawaiian, sliced - Ananas de Hawaii, en tranches	96.5	96.3	96.5	96.6	96.1	100.2	99.8
Raisins, Californian and Australian - Raisins secs de Californie et d'Australie	156.6	151.5	150.4	151.0	150.2	153.0	149.2
Vegetables - Légumes							
Potatoes, No. 1 table - Pommes de terre n° 1 de table	127.0	163.7	100.6	137.7	114.7	134.0	123.1
Onions, No. 1 cooking - Oignons n° 1 à cuire	218.1	228.4	174.1	171.8	128.5	157.4	136.4
Carrots - Carottes	115.4	135.8	110.5	162.2	123.4	109.1	108.8
Turnips, Canada No. 1 - Navet canadien n° 1	182.3	196.0	140.3	146.1	125.1	171.0	141.8
Cabbage - Chou	156.6	144.6	108.2	132.3	150.4	167.4	145.2
Tomatoes, fresh - Tomates fraîches	143.2	166.0	100.5	157.5	162.2	143.7	140.5
Celery stalks, green - Céleri en branche, vert	130.5	144.8	122.3	161.7	141.6	150.3	146.7
Lettuce, head, fresh - Laitue pommée fraîche	143.1	146.3	130.1	117.2	160.8	139.9	158.1
Green peas, frozen, fancy - Pois verts congelés, de fantaisie	123.2	123.0	118.4	118.0	118.1	116.1	115.0
Green beans, fr. cut, frozen - Haricots verts coupés, congelés	106.4	107.3	103.3	103.0	102.7	102.4	102.2
Tomatoes, canned, choice - Tomates en boîte, de choix	132.4	131.9	131.0	131.3	128.9	131.6	126.7
Peas, canned, choice - Pois en boîte, de choix	128.2	123.2	118.8	118.4	117.0	125.7	126.5
Corn, canned, cream, choice - Maïs en boîte, en crème, de choix	123.4	122.0	120.9	121.2	119.9	124.7	123.3
Infants' food, vegetable - Aliments pour bébés, légumes	136.7	132.9	125.8	123.9	124.8	118.9	120.1
Beans, with pork and tomato sauce - Haricots au porc à la sauce tomate	133.7	132.5	134.5	133.0	131.6	129.3	126.8
Soup, vegetable - Soupe aux légumes	100.4	99.8	100.0	100.0	99.3	99.7	97.9
Tomato juice, fancy - Jus de tomate de fantaisie ...	109.9	109.5	103.7	102.2	100.4	100.3	98.9(8)
Beverages - Breuvages							
Tea bags - Thé, sachets, orange pekoe	104.0	103.1	101.6	101.0	100.3	101.9	102.5
Coffee, medium quality - Café, qualité moyenne	136.2	126.8	129.3	136.3	132.2	132.4	115.5
Coffee, instant, dried - Café instantané, séché	116.9	111.7	112.6	113.1	112.3	112.9	107.2
Miscellaneous Groceries - Denrées diverses							
Tomato catsup - Ketchup aux tomates	125.4	123.8	119.9	118.8	115.9	112.6	111.6
Peanut butter, plain - Beurre d'arachides, ordinaire	132.1	132.2	137.6	139.0	136.9	139.8	125.0
Pickles, sweet, mixed - Cornichons sucrés variés ...	134.2	134.0	129.8	129.1	127.7	125.3	121.4
Jelly powders, flavoured - Gelée en poudre aromatisée	129.8	127.5	122.8	123.3	121.5	118.0	117.1

(1) Includes cuts with bone-in and boned and rolled. - Y compris les morceaux avec os, sans os et roulés.

(2) Includes cuts with blade-in and blade removed. - Y compris les morceaux avec ou sans palette.

(3) Indexes based on chain store prices in 7 cities. - Les indices sont fondés sur les prix dans les magasins à succursales multiples de 7 villes.

(4) Indexes based on prices for pectin and pure jam combined. - Les indices sont basés sur les prix de la confiture avec pectine et de la confiture pure.

(5) Indexes based on prices in 16 cities. - Les indices sont fondés sur les prix dans 16 villes.

(6) 1965=100. - 100 en 1965.

(7) 1963=100. - 100 en 1963.

(8) June 1968=100. - 100 en juin 1968.

TABLE 11. Consumer Price Indexes, Regional Cities, 1962-72(1)

TABLEAU 11. Indices des prix à la consommation, agglomérations urbaines, 1962-72(1)

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 13. - Nota: (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au Tableau 13.

Déc.										

(1) For explanation see page 85. — Pour de plus amples explications, voir la page 85.

(2) The shelter element of regional cities housing indexes moves on the basis of changes in rents only, whereas in the Canada index this movement is derived from changes in both rents and homeownership costs. See also page 87. — Au niveau des agglomérations urbaines, l'élément logement de l'indice de l'habitation varie selon les changements dans les prix des loyers; par contre, au niveau du Canada, l'élément logement tient compte à la fois des changements dans les prix des loyers et dans les frais de possession d'une maison. Voir la page 87.

(3) Includes shelter and household operation. The shelter element of regional city housing indexes moves on the basis of changes in rents only, whereas in the Canada index this movement is derived from changes in both rents and home-ownership costs. See also page 85. — Comprend le logement et l'entretien du ménage. Au niveau des agglomérations urbaines, l'élément logement de l'indice de l'habitation varie selon les changements dans les prix des loyers; par contre, au niveau du Canada, l'élément logement tient compte à la fois des changements dans les prix des loyers et dans les frais de possession d'une maison. Voir aussi la page 85.

1) Indexes for current year are subject to revision

1) Indexes for current year are subject to revision. - Les données de l'année courante sont sujettes à révision.
2 & 3) From Tables 18 and 19. - Provenant des Tableaux 18 et 19.

4) Weights used to combine wage rate series. - Coefficients de pondération utilisés pour réunir les séries sur les taux de rémunération:

Labourer - Ouvrier	46
Carpenter - Menuisier-charpentier	30
Painter - Peintre	7
Electrician - Électricien	5
Plumber - Plombier	5
Bricklayer and Mason - Briqueteur et maçon	3
Sheet Metal Worker - Tôlier	2
Truck Driver - Conducteur de camion	2
Total	100

5) Implicit weights of the 1961=100 arithmetically converted indexes, materials 51.9, wages 48.1. - Coefficients implicites de pondération obtenus par conversion arithmétique à 1961=100, matériaux 51.9, main-d'oeuvre 48.1.

6) Implicit weights materials 55.1, wages 44.9. - Coefficients implicites de pondération, matériaux 55.1, main-d'oeuvre 44.9.

7) National Income and Expenditure Accounts, Catalogue 13-001, quarterly. - (N° 13-001 au catalogue, trimestriel).
This series contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in contractors profit and productivity. - Cette série comprend une composante génie aussi bien qu'une composante construction: elle n'a donc pas tout à fait la même portée que l'indice synthétique pour la construction non-résidentielle. Les indices synthétiques sont corrigés des variations des profits et de la productivité des entrepreneurs.
For further detailed explanation see Prices and Price Indexes - May 1970. Pour des explications détaillées voir Prix et indices de prix - Mai 1970.

TABLE 26. Price Indexes of Electric Utility Construction, Canada, Annually 1957 Forward
1961=100

TABLEAU 26. Indice des prix à la construction dans les services d'électricité, Canada, par année depuis 1957

Item - Article	Year - An														
	1957	1958	1959	1960	1961	1962	1963	1964	1965	1966	1967	1968	1969	1970	1971P
Distribution systems - Total(6) - Réseaux de distribution	96.5	93.2	96.8	100.3	100.0	101.8	102.5	104.6	107.1	112.4	116.1	115.6	120.3	129.3	133.4
Construction - Construction	91.9	93.5	96.3	98.5	100.0	102.5	105.2	107.7	112.3	118.4	125.3	126.3	133.0	144.5	149.0
Equipment - Matériel	106.6	92.5	97.9	104.3	100.0	100.4	96.4	97.6	95.4	99.0	95.7	91.8	91.8	95.4	98.7
Transmission lines - Total(6) - Lignes de transmission	94.4	95.7	97.0	98.9	100.0	100.9	102.3	102.7	108.5	113.0	118.7	121.9	127.5	136.5	141.9
Transformer stations - Total(6) - Postes de transformation	118.1	109.0	113.5	109.8	100.0	105.1	107.6	112.0	118.0	122.4	121.2	117.2	120.4	132.2	138.6
Structures and improvements - Installations et améliorations	105.6	101.3	102.6	103.3	100.0	102.6	108.9	112.9	124.0	131.0	127.2	123.5	131.3	137.4	139.0
Equipment - Matériel	132.6	118.4	123.2	115.7	100.0	105.9	107.3	111.9	117.4	120.4	115.1	106.7	106.1	119.4	125.2
hydro-electric generating stations(7) - Centrales d'énergie hydro-électrique(7)					100.0	102.7	106.0	109.5	114.8	121.8	126.2	131.3	139.2	147.8	153.1

- (1) To assist comparison with other published series the indexes presented have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request. - Afin de faciliter la comparaison avec les autres séries publiées, les indices qui figurent ici ont été l'objet d'une conversion arithmétique portant l'indice à 100 en 1961 au lieu de 1956. Les indices calculés sur la base de 100 en 1956 sont fournis sur demande.
- (2) The years referred to are fiscal years. For example 1956 represents the period April 1, 1956 to March 31, 1957. - Les années données ici sont des années financières. Par exemple, l'année 1956 représente la période allant du 1^{er} avril 1956 au 31 mars 1957.
- (3) Major components for the provincial indexes were presented in the November 1970 issue of Prices and Price Indexes. - Les principaux éléments des indices pour les provinces ont paru dans la livraison de novembre 1970 de Prices and Price Indexes.
- (4) Direct comparisons should not be made between this index and the highway index published by the Ont. Dept. of highways. The item content of the indexes is different. - On ne peut comparer directement cet indice avec celui de la voirie publié par le Ministère de la voirie de l'Ontario. Les éléments des deux indices sont différents.
- (5) For further detailed explanation see Prices and Price Indexes - March 1971. - Pour plus de renseignements, voir Prices and Price Indexes. - mars 1971.
- (6) For further detailed explanation see occasional paper 62-526. - Pour plus de renseignements, voir le bulletin hors série No 62-526 au catalogue.
- (7) For further detailed explanation see occasional paper 62-533. - Pour plus de renseignements, voir le bulletin hors série No 62-533 au catalogue.

Industrial Price Indexes

Indices des prix industriels

Industry Selling Price Indexes (1961=100)

Indices des prix de vente dans l'industrie (1961=100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

The data upon which both the initial selection of commodities to be priced are responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles on recueille des statistiques sur les expéditions de produits, sur l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue No. 62-528.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", n° 62-528 au catalogue.

Industry Selling Price Index: Manufacturing

Indices des prix de vente dans l'industrie: Industries manufacturières

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix des livraisons des industries manufacturières qui utilisent de la farine comme ingrédient de leurs produits, tels que le pain, les biscuits ou les gâteaux.

Purchase Price Indexes of Secondary Metals
(1969=100)

Indices du prix d'achat des métaux de deuxième fusion
(1969=100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Canadian Farm Products Price Index (1935-39=100)

Indice des prix des produits agricoles canadiens (1935-39=100)

Prices of Western wheat used in the index prior to August 1972, are buying prices of the Canadian Wheat Board for Nos. 1, 2 and 3 Northern at Thunder Bay. From August 1, 1972 forward, prices used are for Nos. 1 and 2 C.W. Red Spring 14 % at Thunder Bay. Prices for western oats and barley are also supplied by the Wheat Board. Initial payments are first used in the index calculation and are revised as further payments are announced.

Les prix du blé canadien sur lesquels étaient basés le calcul de l'indice avant le mois d'août 1972 étaient les prix payés par la Commission canadienne du blé pour le blé nos 1, 2 et 3 du Nord à Thunder Bay. À compter du 1^{er} août 1972, les prix utilisés sont ceux du blé rouge de printemps, nos 1 et 2 (14 %) à Thunder Bay. Pour calculer l'indice, on se sert d'abord des premiers paiements et on les rectifie à mesure que d'autres paiements sont annoncés.

Final payments for the crop year August 1970 - July 1971 were announced on February 11, 1972 for wheat, and on June 21, 1972 for oats. No final payment was granted for barley for the 1970-71 crop year, however, the initial payment was increased by 10¢ on February 25, 1971.

Les prix définitifs pour la campagne allant d'août 1970 à juillet 1971 ont été annoncés le 11 février 1972 en ce qui concerne le blé et le 21 juin 1972, en ce qui concerne l'avoine. Il n'y a pas eu de dernier paiement pour l'orge en 1970-1971; toutefois, le paiement initial a été majoré de 10 cents le 25 février 1971.

 (4) Used in current indexes. — Utilisé dans les indices courantes.

General Wholesale Index (1935-39=100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things

Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité, l'expression "de gros" fait penser plus au commerce de gros qu'au niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de dire exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, cet indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix des produits. En

are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: Wholesale Price Indexes 1913-50 (Reference Paper No. 24) Prices and Price Indexes 1949-52 (Vol. 23) (Catalogue No. 62-501).

tant que chiffre représentatif classique, on a eu tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros, consulter Wholesale Price Indexes 1913-50 (Reference Paper No. 24) et Prices and Price Indexes 1949-52 (Vol. 23) (n° 62-501 au catalogue).

Retail Price Indexes

Consumer Price Index for Canada (1961=100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services of items for which there is a continually measurable market price over time, corresponding to a specific quantity of the item.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index is unlikely to represent closely the experience of any one family within the group nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families - (a) living in cities with over 30,000 population, (b) ranging in size from two adults to two adults with four children, and (c) with annual incomes during 1957 ranging from \$2,500 to \$7,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In 1952, the time base was updated to 1949=100 from 1935-39=100 and, at the same time, weights were revised to reflect family expenditure patterns in 1947-48. A subsequent revision of weights based on 1957 expenditures was introduced at the beginning of 1961 and the time base was revised from 1949=100 to 1961=100 at the beginning of 1969.

Full details on the latest weighting patterns and time base revisions are available in the occasional paper "The Consumer Price Index for Canada (1949=100) - Revision based on 1957 Expenditures", Statistics Canada Catalogue No. 62-518 and in the January 1969 issue of the monthly bulletin, Prices and Price Indexes, Catalogue No. 62-002.

Consumer Price Indexes for Regional Cities (1961=100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). The regional indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada except for their individual weighting systems.

Also, city indexes are not as comprehensive in price content as the Canada consumer price index and may underestimate slightly the degree of price movements occurring. In this connection, the shelter component of the city indexes moves on the basis of changes in rents only, whereas changes in both rents and homeownership costs are included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and all-items indexes for cities have tended to underestimate somewhat the rates of price increase, particularly over longer periods. Studies are under way to incorporate homeownership prices in city indexes.

Each index is designed to measure the influence of changes in retail prices taking place in the localities specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in those particular areas.

Indices des prix de détail

Indice des prix à la consommation au Canada (1961=100)

L'indice des prix à la consommation sert à mesurer le taux de variation du prix qu'il en coûte pour acheter un "panier" de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" demeure le même; il équivaut tout au moins à une quantité égale de biens et services de qualité égale; de plus, il est constitué de produits pour lesquels on peut toujours trouver sur le marché un prix mesurable et correspondant à une quantité déterminée de ce produit.

L'indice porte sur un groupe étendu mais bien déterminé de familles urbaines et rend compte des variations des prix auxquelles l'échantillon en question a dû faire face. Il est fort peu probable que l'indice représente fidèlement l'expérience d'une famille en particulier; de même, il ne faut pas s'attendre à ce qu'il rende compte des variations des prix auxquelles ont fait face des groupes sensiblement différents par le revenu, la taille de la famille et le lieu de résidence. L'échantillon sur lequel porte l'indice est composé de familles - a) vivant dans des villes de plus de 30,000 habitants, b) dont la taille oscille entre deux adultes et deux adultes avec quatre enfants et c) dont le revenu annuel en 1957 oscillait entre \$2,500 et \$7,000. Pour évaluer l'influence des variations de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation porte sur les variations d'environ 300 articles.

L'indice des prix à la consommation au Canada remonte au début du siècle; depuis lors, on a révisé périodiquement la période de référence et les schémas de pondération. Ainsi, en 1952, la période de référence est passée de 1935-1939=100 à 1949=100; à la même occasion, les poids ont été revus de façon à présenter un reflet de la structure des dépenses des familles en 1947-48. La révision suivante des facteurs de pondération était fondée sur les dépenses des consommateurs en 1957 et fut introduite au début de 1961. Enfin, c'est au début de 1969 qu'on porta la période de 1949=100 à 1961=100.

Le lecteur trouvera de plus amples renseignements sur les dernières révisions du schéma de pondération et de la période de référence dans la publication occasionnelle "The Consumer Price Index for Canada (1949=100) - Revision based on 1957 Expenditures" (n° 62-518) et dans la livraison de janvier 1969 du bulletin mensuel "Prices and Price Indexes" (n° 62-002).

Indices des prix à la consommation dans certaines agglomérations urbaines (1961=100)

Ces indices sont publiés mensuellement dans le présent bulletin (voir Tableau 11). Par leur conception et par les éléments qui les composent, ces indices sont en général similaires à l'indice des prix à la consommation au Canada, seuls leurs coefficients de pondération diffèrent.

Aussi, les indices de prix dans les villes ne représentent pas les prix de façon aussi complète que l'indice des prix à la consommation au Canada et ils peuvent sous-estimer légèrement l'importance des mouvements de prix. C'est ainsi que l'élément "logement" des indices des villes varie en fonction des changements dans les loyers uniquement, alors que l'indice pour l'ensemble du Canada comprend les loyers et les coûts de propriété. A la suite d'une augmentation des coûts de propriété plus rapide que celle des loyers, les indices de l'habitation et de tous les éléments pour les villes ont tendu à sous-estimer quelque peu les taux de croissance des prix, surtout sur de plus longues périodes de temps. On étudie actuellement l'incorporation des prix de propriété dans les indices des villes.

Chaque indice est conçu de façon à mesurer les conséquences des variations des prix de détail survenant dans les agglomérations en question sur le prix d'un panier constant de biens et de services représentant la consommation d'un groupe représentatif de familles appartenant à ces secteurs.

In using the city indexes, it should be remembered that they are not indicators of comparative levels of prices as between the cities. That is, they do not in any way indicate whether prices are higher or lower in one city than in another.

For comparisons of retail price differentials between cities see Table 14 of this publication and the relevant explanatory note.

Historical Consumer Price Indexes (1969=100) for "Thunder Bay" and "Quebec City" are available, with explanatory notes on request from Retail Prices Section, Prices Division, Statistics Canada.

Measuring the Purchasing Power of Earnings

Changing consumer price levels affect the amounts of goods and services which a dollar will buy, and average earnings, of course, will be affected in the same way. An earnings measurement which takes the change of consumer prices into account, can be calculated by reducing actual earnings averages by the percentage amounts consumer price levels rise, or increasing them by the amount price levels fall. The adjusted averages may be used to indicate the comparative quantities of goods and services which could be purchased by average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100 in week B, and that in the same interval a consumer price index advances from 100.0 to 110.0. Because of the 10 % rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. Likewise, a 25 % rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price increase. The adjusted average is \$90.91 ($100.0/110.0 \times \$100.$), which may be referred to as a weekly wage average for week B expressed in the dollars of period A, or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express in index number form the relationship between the week A average of \$80.00 and the week B figure of \$90.91. Taking the week A average of \$80.00 as equal to 100.0, the week B index becomes 113.6 ($90.91/80.00 \times 100.0$). Such an index may be called an index of weekly real wages. It indicates that average wages for week B will buy 13.6 % more goods and services than those received in week A, in spite of a 10 % rise in consumer prices. This 13.6 % increase in real wages compares with the rise of 25 % in money wages ($100.00/80.00 \times 100.0$).

It should be noted that while the estimates of average real wages may reflect the experiences of broad groups of workers fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular income group. Group-spending patterns change over periods of time. To the extent that this occurs, the earnings data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be rendered

Le lecteur devra toujours garder en mémoire que ces indices ne sont pas des indicateurs qui permettent de comparer le niveau des prix d'une ville à l'autre et qu'ils n'indiquent en aucune façon si les prix sont plus ou moins élevés dans une ville que dans une autre.

Pour étudier les différences de prix au détail entre les villes, il faut consulter le Tableau 14 de ce bulletin et les notes explicatives qui l'accompagnent.

Les indices chronologiques des prix à la consommation (1969=100) pour Québec et Thunder Bay et les notes explicatives qui les accompagnent peuvent être obtenus de la Section des prix de détail de la Division des prix de Statistique Canada.

Calcul du pouvoir d'achat

Toute variation des prix à la consommation influe directement sur la quantité de biens et de services qu'on peut acheter avec un dollar et par conséquent sur le revenu moyen. Pour mesurer le revenu en tenant compte de la variation des prix à la consommation, on peut déduire du revenu moyen réel le montant proportionnel qui correspond à l'augmentation des prix à la consommation ou ajouter au revenu réel le montant qui équivaut à la diminution des prix à la consommation. Ces moyennes corrigées peuvent ensuite servir à déterminer la quantité de biens et de services qu'on aurait pu acheter grâce à un revenu moyen, les prix à la consommation et les habitudes de consommation n'ayant pas changé. On trouvera ci-dessous des exemples de cette méthode.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B et que dans la même période de temps l'indice des prix à la consommation progresse de 100.0 à 110.0. En raison de l'augmentation de 10 % des prix à la consommation, on n'obtiendra plus autant avec \$1 au cours de la semaine B que pendant la semaine A. De même il serait exagéré de dire que, pour une augmentation de la rémunération de \$80 à \$100 le pouvoir d'achat du salaire hebdomadaire moyen s'est élevé de 25 %. On peut ramener cette augmentation à des proportions plus justes en déduisant du nouveau salaire hebdomadaire moyen l'augmentation des prix à la consommation. La rémunération moyenne corrigée s'établira donc à \$90.91 ($100.0/110.0 \times \$100.$), dont on peut dire qu'elle exprime la rémunération hebdomadaire moyenne de la semaine B en dollars de la semaine A, ou encore qu'elle rend compte du niveau effectif de la rémunération hebdomadaire de la semaine B par rapport à la semaine A.

On peut pousser plus loin les calculs et exprimer à l'aide d'un indice la relation entre le salaire moyen de la semaine A (\$80) et celui de la semaine B (\$90.91). Ainsi, si l'on considère que la rémunération moyenne de \$80 de la semaine A était égale à 100.0, l'indice de la semaine B deviendra 113.6 ($90.91/80.00 \times 100.0$). On pourrait appeler cet indice l'indice de la rémunération hebdomadaire effective; il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6 % de plus en biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10 % des prix à la consommation. L'augmentation de 25 % des salaires se ramène donc à une augmentation effective de 13.6 % ($100.0/80.00 \times 100.0$).

Il convient de souligner que, même si les estimations de la rémunération moyenne effective résument assez bien la situation d'un large éventail de travailleurs, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur le revenu porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur le revenu ajustées par l'indice des prix à la consommation (les habitudes de consommation étant "fixes") perdront graduellement de leur

less valid. Finally, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce savings to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual and real wages uses 1961 as a reference year. However, the adjustment made in the foregoing illustration can be applied to any reference level; percentage change between any two periods will be the same regardless of the reference period selected.

Inter-City Retail Price Comparisons

Statistics relating to differences in retail prices between Canadian cities were initially developed for food, and subsequently extended to cover such other elements of the family budget as clothing, transportation, household operation, health and personal care, recreation and reading, and tobacco and alcohol. In all, inter-city price comparisons are drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based. Major omissions are shelter (both rented and owned), domestic utilities (fuel, light and water), and restaurant meals. While recognizing the importance of shelter differentials in any overall comparison of the general price level being encountered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require a good deal more research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

Table 14 presents the results of an updating of earlier spatial retail price measurements to May 1971, and broadens the scope of the study to include several more cities. A fuller explanation of the study from which this table is derived is contained in the November 1968 and November 1969 and April 1972 issues of Prices and Price Indexes, Statistics Canada, Catalogue Number 52-002.

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes. In developing these spatial price comparisons efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices equalling 100 to facilitate comparisons over the whole range of cities. The updating of these measurements of inter-city retail price differentials was accomplished

valeur. Enfin, il ne faut pas oublier qu'une partie du revenu peut être consacrée à l'épargne et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations du revenu effectif calculées à partir de moyennes du revenu brut peut différer de l'évaluation des variations du pouvoir d'achat du revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de la rémunération effective ne sert pas à mesurer les variations des niveaux de consommation des salariés et de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente la rémunération tant réelle qu'effective prend pour base l'année 1961. Toutefois, les ajustements illustrés dans les exemples ci-dessus peuvent s'appliquer à tout niveau de référence; la variation proportionnelle entre deux périodes sera en effet identique quelle que soit la période de référence choisie.

Comparaisons entre les prix de détail d'une ville à l'autre

À l'origine, la statistique des différences entre les prix de détail d'une ville du Canada à l'autre a été mise au point pour l'alimentation; par la suite, on l'a étendue à d'autres postes du budget familial tels que l'habillement, les transports, l'entretien du ménage, la santé et les soins personnels, les loisirs et la lecture, et le tabac et l'alcool. Au total, les comparaisons d'une ville à l'autre portent sur des biens et des services constituant près des trois quarts du budget servant actuellement à construire l'indice des prix à la consommation au Canada. Les comparaisons omettent de mentionner principalement le logement (location et frais de possession), les services publics au profit des ménages (combustible, éclairage et eau) et les repas pris au restaurant. Sans vouloir nier l'importance des différences en ce qui concerne le logement dans toute comparaison globale du niveau général des prix auxquels les consommateurs doivent faire face dans divers centres urbains, il faut bien dire que les problèmes que comporteraient l'établissement d'une comparaison valable d'une ville à l'autre sont tels qu'ils nécessitent encore pas mal de recherche. Entre-temps, on estime que malgré l'absence actuelle de données sur les différences entre les dépenses de logement, la publication de comparaisons des prix de détail pour d'autres postes du budget permettra de faire de gros progrès en ce qui concerne la satisfaction des besoins variés des utilisateurs.

On trouvera au Tableau 14 le résultat d'une mise à jour de mesures de prix de détail tirées précédemment jusqu'à mai 1971, ce tableau élargit la portée de l'étude en y incorporant plusieurs autres villes. Une explication plus détaillée de l'étude dont le tableau en question est tiré figure dans les livraisons de novembre 1968, novembre 1969, et avril 1972 de Prix et indices des prix (n° 62-002 au catalogue).

Les premières données de base pour la présente étude ont été constituées par l'importante collection de prix de détail recueillie lors de la confection des indices nationaux et urbains des prix à la consommation. Au moment d'établir ces comparaisons géographiques de prix, on s'est efforcé d'assurer la comparabilité en prenant des biens et des services de qualité égale et en assortissant autant que possible les points de vente au détail par type. Les relations de prix entre paires de villes ont été calculées puis converties à la base commune des prix de Winnipeg = 100 afin de faciliter des comparaisons pour l'ensemble de toutes les villes. La mise à jour de ces mesures des différences de prix de détail entre les villes a

by application of the relative movement of prices, at the item level in each city, over the intervening periods as derived from the relevant city consumer price indexes. These price relationships at the item level were aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns exist among cities, the magnitude of these differences in the cities covered is not such as to affect most of the spatial comparisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-urban retail price differentials, aggregative indexes beyond major budget groupings are not shown.

It should be noted that the retail prices used in this comparisons, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of non-food commodities can be of significance in explaining inter-city price differentials for these items.

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.

Farm Input Price Indexes (1961=100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. These data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961=100 time base.

Farm Input Price Indexes replace one of the two major component indexes of the previously published series, Price Index Numbers of Commodities and Services Used by Farmers, 1935-39=100. The latter index was composed of a Farm Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replaces the Composite Index Exclusive of Living Component from 1961 forward.

A detailed description of concepts, methods and data sources is contained in the occasional paper, Farm Input Price Indexes, 1961=100, Catalogue No. 62-534, and is reproduced in the September 1971 issue of Prices and Price Indexes, Catalogue No. 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, Farm Input Price Indexes, 1961=100, Catalogue No. 62-004, and in the monthly publication Prices and Price Indexes, Catalogue No. 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterpart, and publication has been suspended.

été assurée grâce à l'extension des mouvements relatifs de prix au niveau de chaque article dans chaque ville aux périodes observées selon le calcul établi à partir de l'indice des prix à la consommation pour la ville en question. Ces relations entre les prix au niveau de l'article ont été agrégées sur la base des habitudes de consommation du citoyen pour l'ensemble du Canada et non pas selon les habitudes de dépense applicables à des villes individuelles. Même s'il existe des différences dans les habitudes de dépense d'une ville à l'autre, l'importance de ces différences en ce qui concerne les villes dont il est question ici ne sont pas suffisantes pour influencer sensiblement sur la plupart des comparaisons géographiques. Du fait de l'absence des relations de prix en ce qui concerne le logement, dont il a déjà été question ci-dessus et qui pourrait avoir une importance considérable chaque fois que l'on voudrait tirer une comparaison globale entre les différences de prix à la consommation au détail d'une ville à l'autre, on ne trouvera ici aucun indice synthétique agrégé au-delà des principales composantes du budget.

Il faut remarquer que les prix de détail ayant servi à la présente comparaison sont ceux que doit payer le consommateur et comprennent donc les taxes de vente et les taxes d'accises qui peuvent s'appliquer. Les différences d'une province à l'autre entre les barèmes de taxe de vente imposés sur une grande variété de biens non alimentaires peut avoir une grande importance pour expliquer les différences de prix d'une ville à l'autre pour les articles en question.

Le fait que ces indices aient été exprimés en prenant Winnipeg = 100 ne signifie pas que le choix de Winnipeg comme ville de référence ait une signification particulière et les indices pourraient être exprimés sur la base de n'importe laquelle des villes qui y figurent.

Indices de prix des entrées dans l'agriculture (1961=100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui y sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961=100.

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39=100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

Le bulletin hors série Farm Input Price Indexes, 1961=100 (n° 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est reprise dans Prices and Price Indexes de septembre 1971 (n° 62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest du Canada et pour l'ensemble du Canada, de 1961 à troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel Farm Input Price Indexes, 1961=100 (n° 62-004) et dans le bulletin annuel Prices and Price Indexes (n° 62-002).

On n'a pas remplacé l'indice du coût de la vie pour la famille agricole des séries de 1935-39 par un équivalent à jour et on a cessé de le publier.

Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto, Montreal and Canadian stock exchanges. The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the common and mining stock indexes are Thursday's closing quotations as reported in the Globe and Mail and the Montreal Gazette. For preferred stocks, prices are monthly weighted averages of the daily closing prices in which weights are daily total sales. The price reference base for the indexes is the year 1956 which has been adopted as an interim base for recently developed Statistics Canada indexes. The indexes express prices as a percentage of prices in 1956 and arithmetically converted to the 1961=100 base.

Revised indexes on the base 1956=100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the index, apart from the shift in the price reference base, is the classification of stocks according to the Standard Industrial Classification. In the continuing major group Industrials 4 sub-groups (Milling and Grains, Food and Allied Products, Machinery and Equipment, and Building Materials) have been replaced by 8 new sub-groups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-Metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of the former index, viz., Industrial Mines, Beverages, Textile and Clothing, Pulp and Paper, and Oils (renamed Petroleum) have been continued. The major group Utilities is continued but the Pipelines index has been added as a sub-group and the previous Power and Traction sub-group has been replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A new major group Finance is composed of the former major group Banks and the former supplementary index Investment and Loan. Constant weights, which were previously limited to major groups, have been extended to sub-groups. Weights in the index continue to be based on shares outstanding.

For the list of stocks currently included in the Inventors Index and Preferred Index, see Prices and Price Indexes for February 1972.

Residential and Non-Residential Building Construction Price Indexes

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of users (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of Prices and Price Indexes, and this explanation is available on request from the Prices Division, as is historical monthly data for the series.

Because the indexes measure the impact of price change on the materials and labour inputs to construction, and not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as indicators of price change for the output of building construction, or buildings in place. Users are therefore warned to exercise caution in making use of the series, for this purpose. A comparison of these series with the implicit price deflators(1) providing an estimate of price change for the output of the industry, derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of adjusting the fixed-weighted input indexes for changes in productivity and profit margins.

(1) National Income and Expenditure Division, Statistics Canada.

Indices des cours des valeurs mobilières

Les indices des cours des valeurs mobilières donnent une mesure dans le temps de l'effet du mouvement des prix sur la valeur d'un portefeuille de titres achetés et détenus par un placeur hypothétique (et non pas un spéculateur). Le portefeuille représente des titres des sociétés canadiennes cotées à la Bourse de Toronto, de Montréal et à la Bourse canadienne. Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation. Les indices des prix des titres ordinaires et des titres miniers sont les cours de fermeture de la Bourse du jeudi indiqués dans le Globe and Mail et dans la Montreal Gazette. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles du total des ventes quotidiennes. La base de pondération entre les sous-groupes est l'année 1956. Toutes les séries ont été recalculées sur la base de 1961=100. Les indices sont pondérés d'après le nombre d'actions en circulation.

Les indices révisés sur la base 1956=100 ont été publiés pour la première fois dans la livraison de juin 1962 de ce bulletin. La plus importante modification à la révision de l'indice, à part le changement de la période de référence, a été le classement des actions d'après la Classification des activités économiques. Dans le cas du grand groupe des valeurs industrielles, 4 sous-groupes (minoterie et céréales, aliments et produits connexes, machines et matériel et matériaux de construction) ont été remplacés par 8 nouveaux sous-groupes (aliments, imprimerie et édition, métaux primaires, produits métalliques, minéraux non métalliques, produits chimiques, construction et commerce de détail). On a conservé les 5 autres sous-groupes de l'ancien indice: mines industrielles, boissons, textiles et habillement, pâtes et papiers, et huiles (sous la désignation de pétrole). Le grand groupe des services d'utilité publique a été conservé mais l'indice des pipelines a été ajouté comme sous-groupe et l'ancien sous-groupe d'énergie et traction a été remplacé par deux nouveaux sous-groupes: l'énergie électrique et la distribution du gaz. Le nouveau grand groupe "Finances" est composé de l'ancien grand groupe banques et de l'ancien indice supplémentaire investissements et prêts. Les facteurs constants de pondération qui étaient autrefois limités aux grands groupes s'appliquent maintenant aux sous-groupes. Les facteurs de pondération de l'indice continuent à être basés sur les actions en circulation.

La liste des titres repris actuellement dans les indices des valeurs de placements et dans les indices des valeurs privilégiées se trouve dans Prix et indices des prix de février 1972.

Indices des prix de la construction résidentielle et non résidentielle

Les indices à pondération fixe des prix des entrées de matériaux et de salaires dans la construction résidentielle et non résidentielle sont publiés ici pour faciliter la tâche aux utilisateurs (Tableau 20). On trouvera une description plus détaillée des caractéristiques des indices dans Prices and Price Indexes de mai 1970. On peut s'en procurer un exemplaire ainsi que les données mensuelles chronologiques sur cette série en s'adressant à la Division des prix.

Comme les indices mesurent l'influence des variations de prix sur les entrées de matériaux et de main-d'oeuvre du bâtiment plutôt que les répercussions des variations de marges bénéficiaires ou de productivité, on les croit surestimés en tant qu'indicateurs des variations de prix de la construction, ou des bâtiments construits. Les utilisateurs devront donc faire preuve de discernement quand ils se serviront des séries à cette fin. Si l'on compare ces séries avec les facteurs de dégonflement(1) des prix implicites (qui donnent une estimation de la variation du prix pour la production de l'industrie), obtenus en mesurant la formation brute de capital fixe en dollars constants, on aura un aperçu des effets de l'ajustement sur l'évolution des prix des indices à pondération fixe des entrées pour tenir compte des variations de productivité et de marges bénéficiaires.

(1) Division du revenu national et de la défense nationale, Statistique Canada.

During the period from 1926-1966 a special sample of respondents supplied materials prices for the index. As of 1961 this sample has been replaced with prices from the ISPI system(2). The latter are published monthly in Table 2 of this publication.

The Construction wage rate series is based on wage rate material supplied by the Labour Standards Branch, Dept. of Labour, and relates to minimum wages paid on government contracts for construction in a variety of trades and cities.

Users are reminded that the indexes were arithmetically rebased to the year 1961=100 and therefore combining the components with the weights as shown will not provide the composite index provided. Users able to provide their own weights for the components can recombine the components to suit their particular needs.

Basic Union Wage Rate Indexes for Major Construction Trades

Basic union wage rate indexes are prepared for 12 major construction trades in each of 14 cities in Canada. Weighted average city indexes are prepared as well as a 14 city composite. Indexes are released quarterly in summary form in Tables 21 and 22 of Prices and Price Indexes (62-002). This index is found in Table 20 of Prices and Price Indexes (62-002). Full trade detail, by city, is published quarterly in the Construction Price Statistics Service Bulletin, (62-006).

Rates utilized in index calculations are derived mainly from the Construction Collective Agreement Survey Service provided by the Canadian Construction Association. These rates are supplemented as necessary by surveys of some union locals. While indexes containing supplementary benefits will be available soon, presently published indexes relate to basic union wage rates only. The rates indicate the rate of straight time compensation for one hour in the city specified. Rates converted into the form of ratios were combined into weighted average city indexes utilizing 1961 Census of Population data on numbers of people employed by trade and average earnings in the construction industry.

The base-weighted indexes provide an estimate of the impact of rate change on basic union wages for the major construction trades employed in a given city. Because union workers in cities tend to be engaged mainly in non-residential or commercial building construction and because rates for trades associated with engineering work were excluded from the price sample the indexes best approximate wage rate change for non-residential construction.

Highway Construction Price Indexes (1961=100)(3)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the previously published indexes to a 1956=100 time base. Users are warned that an

(2) Industry Selling Price Indexes 1956-1968 Cat. 62-528.

(3) The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

Au cours de la période 1926-1966, un échantillon spécial d'enquêtés a donné les prix pour l'indice. En 1961, on a remplacé cet échantillon par les prix tirés du système I.P.V.I.(2) Ces prix sont publiés par mois dans le Tableau 2 du présent bulletin.

La série consacrée au taux de rémunération dans l'industrie du bâtiment est basée sur les chiffres fournis par la Direction des normes du travail du ministère du Travail; elle a trait au salaire minimum versé aux termes de marchés signés avec le gouvernement pour des travaux de construction dans divers corps de métiers et dans diverses villes.

Nous rappelons aux utilisateurs que les indices ont été recalculés sur la base 1961=100 et qu'ils n'obtiendront pas l'indice synthétique fourni en combinant les éléments et les pondérations donnés. Les utilisateurs qui sont à même de fournir leur propre pondération pour les éléments peuvent procéder à leur propre combinaison adaptée à leurs besoins spécifiques.

Indices du salaire syndical de base dans les principaux corps de métiers

Les indices du salaire syndical de base portent sur les 12 principaux métiers de la construction dans 14 grandes villes canadiennes. On calcule les indices pondérés moyens pour chaque ville de même que l'indice synthétique des 14 villes. Les indices sont publiés chaque trimestre dans les Tableaux 21 et 22 de la publication Prix et indices des prix (numéro de catalogue 62-002). (...) On peut trouver cet indice dans le tableau 00 de la publication Prix et indices des prix (no 62-002). Des données détaillées sur tous les métiers de la construction dans chaque ville sont publiés chaque trimestre dans le bulletin de service Statistique des prix dans la construction (numéro de catalogue 62-006).

Les taux utilisés dans le calcul des indices proviennent principalement de la publication Construction Collective Agreement Survey Service de l'Association canadienne de la construction. Des enquêtes auprès de certaines succursales de syndicats ont été menées lorsqu'il fallait disposer de taux supplémentaires. On publiera sous peu des indices contenant les avantages supplémentaires, mais les indices actuels portent uniquement sur le salaire syndical de base. Les taux correspondent à la rémunération normale pour une heure dans la ville en question. Les taux convertis en ratios ont été transformés en indices pondérés moyens des villes à partir des données tirées du recensement de la population de 1961 sur les effectifs de chaque métier et les gains moyens dans l'industrie de la construction.

Les indices pondérés permettent d'évaluer l'influence de la variation du taux des salaires syndicaux pour les principaux métiers de la construction dans une ville donnée. Étant donné que les travailleurs syndiqués dans les villes s'occupent surtout de la construction non résidentielle, ou commerciale et que les taux des métiers relevant du génie civil n'ont pas été inclus dans l'échantillon des prix, les indices constituent la meilleure approximation des variations dans les taux de salaire dans la construction non résidentielle.

Indices des prix de la construction routière (1961=100)(3)

Les indices des prix de la construction routière au Canada représentent les prix payés chaque année par les administrations provinciales au titre des marchés de construction routière, en pourcentages des sommes payées en 1961. La conversion des indices à la base 1961=100 ne modifie pas leur évolution en pourcentages comparativement aux indices publiés précédemment et dont la base était 1956=100. Les utilisateurs ne doivent pas s'attendre à ce que le groupement des indices

(2) Indices des prix de vente dans l'industrie, 1956-1968, no 62-528 au catalogue.

(3) Il s'agit d'exercices financiers. 1968 représente donc la période du 1er avril 1968 au 31 mars 1969.

aggregation of the converted major group indexes with the published weights will not yield the published 1961=100 all items indexes. The conversion does not create this problem for a user wishing to reweight the converted major group indexes using weights appropriate to his own purpose.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by specified provincial governments during the weight-base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956 are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problem of estimating price change for highway construction see pages vi & vii of the December 1967 issue of Prices and Price Indexes, Catalogue 62-002 and pages 9 & 10 of the reference paper Price Indexes of Highway Construction in Catalogue 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or updating previously costed roadwork, in estimating replacement cost of previously completed roadwork, and as historical measurements of price trends in highway construction.

The indexes do not necessarily reflect the price movements of non-contract construction or maintenance work. The indexes are designed to measure price changes for a fixed programme of highway construction, in each of the seven provinces. Because price levels in the time base-period (1961) varied from province to province the indexes cannot be used to compare price differences between provinces, but only to compare differences in the rate at which prices are changing in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction price indexes but rather for units of construction work put in place such as an acre of clearing, a cubic yard of earth excavation or a ton of bituminous hot-mix paving. In addition, the index contains prices of some materials, such as culvert pipe, usually supplied to the contractor by the highway departments. Prices of highway construction work are annual weighted averages of bid prices of units of construction in groups of contracts awarded, classified by price-determining characteristics of the contracts and the bid items such as volume of the bid item, type of contract and geographic location. Prices of material items of supply are prices paid by government departments to suppliers.

Price Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and equipping electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction technology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

convertis des grands groupes et des pondérations publiées donne l'indice général publié (1961=100). Cette conversion ne pose aucun problème à l'utilisateur qui désire réviser la pondération des indices convertis des grands groupes en utilisant les poids adaptés à ses fins propres.

Les indices pondérés en fonction de la base sont publiés chaque année; ils mesurent, pour la période allant de 1956 à 1968, l'influence de l'évolution des prix sur le coût des programmes spécifiques de construction de routes au Canada représenté par les marchés de construction de routes d'environ \$50,000 ou plus accordés par certaines administrations provinciales au cours de la période visée par la base de pondération. Les poids des éléments des indices qui représentent l'importance relative des unités de construction en 1956 sont constants. Seules les estimations de prix varient d'une année à l'autre; les indices mesurent donc l'évolution des prix dans le temps. Pour plus de détails sur l'estimation de l'évolution des prix pour la construction routière, se reporter aux pages vi et vii du numéro de décembre de Prices and Price Indexes (n° 62-002 au catalogue de Statistique Canada) et aux pages 9 et 10 du bulletin intitulé Price Indexes of Highway Construction in Canada (n° 62-520 au catalogue de Statistique Canada). L'indice général ou ses éléments servent à la planification et à la budgétisation des programmes de construction routière, à indexer ou à mettre à jour les prix de travaux de routes effectués précédemment, à estimer le coût de remplacement des travaux routiers achevés précédemment et à mesurer chronologiquement l'évolution des prix de la construction routière.

Les indices ne reflètent pas nécessairement l'évolution des prix de la construction effectués hors marché ou des travaux d'entretien; ils servent à mesurer les variations de prix pour un programme déterminé de construction routière dans chacune des sept provinces. Au cours de la période qui a servi de base (1961), les niveaux de prix ont varié d'une province à l'autre; aussi, on ne peut utiliser les indices pour comparer des différences de prix entre les provinces mais on peut seulement les employer pour comparer les différences entre taux de variation des prix dans les provinces.

Les prix compris dans l'indice ne se rapportent pas aux unités de travail ni de matériaux comme c'est habituellement le cas dans l'indice des prix de la construction; ils se rapportent plutôt aux unités de travail de construction effectué, comme le défrichement d'une acre de terrain, l'excavation d'une verge cube ou l'épandage à chaud d'une tonne de béton bitumineux. En outre, l'indice comprend le prix de certains matériaux, par exemple, les tuyaux de ponceau fournis habituellement à l'entrepreneur par les ministères de la Voirie. Les prix des travaux de construction routière sont des moyennes pondérées des prix de soumission pour les unités de construction par groupe de marchés classés selon les caractéristiques des marchés qui déterminent le prix et les éléments d'offre tels que le volume de chaque poste, le type de marché et la situation géographique. Les prix des matériaux fournis sont les prix payés par les ministères aux fournisseurs.

Indices des prix à la construction dans les services d'électricité

En ce qui concerne les services d'électricité, l'indice a pour but de fournir une estimation des conséquences des variations de prix sur le coût des matériaux, de la main-d'oeuvre et du matériel utilisés dans la construction et l'équipement des services d'électricité au cours d'une période de référence donnée. L'indice sert à mesurer combien il faudrait payer en plus ou en moins pour réaliser un programme de construction identique à celui de la période de référence en utilisant les mêmes techniques de construction et en supposant que les taux de rentabilité et de productivité de la construction soient les mêmes pour les deux périodes.

As the market does not yield comparable selling prices for such unique transactions as, for example, the sale of a transmission line, it was not possible to produce an index of the prices of completed structures. Completed structure indexes would be appropriate for users wishing either to estimate reproduction costs or to deflate capital formation. For such uses the indexes introduced in this publication have specific shortcomings. Nonetheless, they may be helpful for such purposes provided the users understand the deficiencies. Thus the reader is asked to make particular note of Section III, of Occasional Paper Catalogue 62-526 Price Indexes of Electrical Utility Construction - The Necessity for Compromise and Section XI, (of the same paper) Uses and Limitations. In addition, because particular construction projects are unique, the aggregate indexes will not likely be appropriate to specific projects since they relate to an average mix of materials, labour and equipment derived from a variety of projects in a specific base period. Thus, if the component price indexes and their weights included in the aggregate index presented herein are inappropriate for a particular purpose the user should consider selecting appropriate component indexes from among those published herein. These indexes could then be combined into an aggregate index by utilizing weights derived from the projects or assets to be costed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials or equipment. The price reported is for units and terms of sale representative of the volume sales of the manufacturer. Where sales to electric utilities form a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and others directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial tax changes. Until December 1964 wage rate data were supplied by the Federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union basic wage rates reported by major utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban own account and contract electric utility construction. Some further improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Construction has been defined as new construction or major reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by major utilities, relating to own account and to contract construction erected during the last half of the 1950's. Weights were derived from these data which indicated the relative importance of the major inputs to the construction. The components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and expenditures for labour, e.g. - line-men and groundmen. Costs relating to construction equipment such as trucks, and components of equipment operating costs such as tires, gasoline and repairs were also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land and rights-of-way have been excluded.

Comme il est impossible d'obtenir directement sur le marché des prix de vente comparables pour des opérations de caractère aussi unique, par exemple, que la vente d'une ligne de transport d'énergie, Statistique Canada n'a pu établir un indice du prix des installations en place. Un tel indice ne serait utile que si l'on désirait obtenir une estimation des sommes qu'il faudrait engager pour réaliser à nouveau un programme de construction identique ou encore pour dégonfler une formation de capital. Les indices publiés ici présentent en ce sens certaines lacunes. Ils peuvent néanmoins servir à de telles fins pourvu que les utilisateurs en comprennent les limites. Les lecteurs peuvent se reporter aux Sections III et XI de la publication Price Indexes of Electrical Utility Construction (Statistique Canada, 62-526): "The Necessity for Compromise" et "Uses and Limitations". De plus, en raison du caractère unique de chaque projet de construction, l'indice synthétique ne pourra sans doute pas s'appliquer à un projet bien précis car il porte justement sur une moyenne des matériaux, de la main-d'oeuvre et du matériel utilisés dans la réalisation de plusieurs projets au cours d'une période de référence donnée. Ainsi, si les indices détaillés et les poids correspondants qui composent les indices synthétiques présentés ici ne conviennent pas à un usage bien précis, l'utilisateur pourra toujours se servir des autres indices détaillés et construire, à l'aide des coefficients de pondération, les indices de son choix, soit pour évaluer le coût d'un projet, soit pour établir des facteurs de dégonflement.

La plupart des prix des matériaux et du matériel utilisés pour établir les indices sont les prix de vente déclarés mensuellement par les fabricants. Ces prix sont représentatifs des unités de mesure et des conditions de vente valables pour les ventes en grande quantité des fabricants. Lorsque les ventes aux services électriques ne représentent qu'un faible pourcentage du chiffre d'affaire d'un fabricant, il est possible que le prix déclaré ne représente pas de façon satisfaisante le prix consenti aux entreprises en construction et aux autres industries s'occupant directement de construction et d'installation de services d'électricité. Dans ces cas, on a inclus dans l'indice les prix facturés aux autres fabricants ou grossistes. On a tenu compte, dans l'établissement de l'indice, des variations de la taxe de vente fédérale; toutefois, il n'a été fait aucun redressement pour les variations de taxe provinciale. Jusqu'en décembre 1964, les données sur les taux de rémunération étaient fournies par le ministère fédéral du Travail et représentaient le salaire horaire minimum versé aux personnes travaillant au titre d'un marché accordé par le gouvernement fédéral dans certaines grandes villes. En 1965, on fit entrer dans l'indice le salaire de base exigé par les syndicats et déclaré par les principaux services et par certains entrepreneurs. L'échantillon choisi représente donc une estimation des variations du taux de rémunération dans la construction en ville de services électriques pour compte propre ou au titre d'un marché. Certaines améliorations à l'indice sont prévues de façon à l'étendre aux personnes non syndiquées travaillant dans les régions rurales à la construction de lignes de transport d'énergie.

Le terme "construction" a été défini comme étant la construction neuve ou la réparation de réseaux de distribution, lignes de transport d'énergie, de postes de transformation ou de postes de manoeuvre. L'entretien et les frais d'exploitation ne sont pas compris. Les données sur les prix de revient sont fournies par les principaux services d'électricité et portent sur la construction exécutée pour compte propre ou au titre d'un marché au cours de la deuxième moitié des années cinquante. Les poids tirés de ces données représentent l'importance relative des principaux éléments entrant dans la construction. Les composantes du coût de la distribution et du transport comprennent certains éléments comme les poteaux, la quincaillerie, les conducteurs, les isolateurs, les compteurs, les transformateurs de distribution et les dépenses en main-d'oeuvre (monteurs, personnel de service, etc.). Les dépenses entraînées par le matériel de construction (camions et pièces d'équipement) et les frais d'exploitation (pneus, essence et réparations) sont également inclus. Les postes de transformation et les postes de manoeuvre comprennent certains des éléments ci-dessus; les frais les plus importants sont cependant entraînés par les transformateurs et les appareils de connexion. dépenses foncières et les droits de passage ont été exclus.

The term Canadian electric utility has been defined to include municipal as well as nonmunicipal utilities but the majority of the cost data tabulated was derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

Price Indexes of Hydro-electric Generating Stations

The following additional points may be of assistance to users of the hydro-electric generating stations index which was described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

- (a) Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.
- (b) Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.
- (c) Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.
- (d) Weighting patterns exclude expenditure for ancillary facilities for logging and navigation, permanent houses, etc.

Price Indexes of Machinery & Equipment

In response to the need of users wishing either to correct expenditure data of machinery and equipment for price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968=100 and most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

Conceptually purchasers' prices should be utilized in such indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and federal sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices Division collections from manufacturers most of whom reside in the United States.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim

Par définition, l'expression "service d'électricité canadien" englobe aussi bien les services municipaux que les autres; toutefois, la majeure partie des données de coût ont été tirées des déclarations des services non municipaux. Les fabricants qui produisent de l'électricité destinée à l'auto-consommation et qui peuvent également vendre de l'électricité ont été exclus de cette enquête.

Indices de prix des centrales hydroélectriques

Les points supplémentaires ci-après peuvent aider les utilisateurs de l'indice des centrales hydroélectriques décrit en détail dans le bulletin hors-série de Statistique Canada portant le numéro 62-533.

- (a) Les données sur le taux de rémunération proviennent de diverses sources et surtout des enquêtes sur les accords syndicaux de l'Association canadienne de la construction et des études du Bureau de recherche sur les traitements portant sur la rémunération des travailleurs intellectuels, des techniciens et du personnel administratif. Pour le calcul de l'indice, on a utilisé les taux de rémunération de base, avantages sociaux non compris.
- (b) Au lieu du prix des entrées de main-d'oeuvre, de matériaux et de location de matériel pour la production de béton et des remblais effectués, on a utilisé le prix du béton préparé et celui de la terre et du gravier en place.
- (c) L'indice comprend les prix correspondant à certains postes de dépenses qui n'étaient pas repris auparavant dans les indices de prix des entrées dans la construction: intérêts pendant la construction, frais généraux, fourniture et entretien de barrages temporaires.
- (d) Les facteurs de pondération ne comprennent pas les dépenses affectées aux installations auxiliaires pour l'exploitation forestière et la navigation, les maisons permanentes, etc.

Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968=100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente des fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du U.S. Bureau of Labour Statistics ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre, à mesure qu'ils seront disponibles. En

preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de prix des marchandises, compte tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. Figures not available.
- ... Figures not appropriate or not applicable.
- Nil or zero.
- Amount too small to be expressed.
- P Preliminary figures.
- r Revised figures.
- x Confidential to meet secrecy requirements of the Statistics Act.

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. Nombres indisponibles.
- ... N'ayant pas lieu de figurer.
- Néant ou zéro.
- Nombres infimes.
- P Nombres provisoires.
- r Nombres rectifiés.
- x Confidentiels en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTES ON PRICES AND PRICE INDEX NUMBERS

Industry Selling Price Index: Manufacturing (1961=100)

The industry selling price index (Total manufacturing) moved 0.4 % higher in October to 129.0 from the September index of 128.5. It was 5.2 % higher than the October 1971 index of 122.6. Of the 101 industry indexes included in the Total, 49 were higher, 11 declined and 41 were unchanged.

In terms of the relative contribution to the overall change in the total manufacturing index, the more notable changes were increases recorded in the wood products group which still continues its upward trend with price increases occurring mainly in the sawmills and planing mills industry. In the foods and beverages group the most relatively important advances were recorded in slaughtering and meat packing, fruit and vegetable canners and preservers, and fish products industries. Also moving upward was the leather products group with all industries within the group registering increases. Decreases for the period were relatively insignificant with the exception of the transportation equipment group where price declines were recorded in the motor vehicle manufacturers industry, reflecting the evaluation of quality change for 1973 passenger cars.

October to September Changes in Industry Indexes

Variations d'octobre à septembre des indices dans l'industrie

	Oct/Sept			Major group indexes — Indices des groupes principaux		
	Number of industries — Nombre d'industries			Oct. 1972	Sept. 1972	Oct. 1971

NOTES SUR LES CHIFFRES DES PRIX ET INDICES DE PRIX

Indice des prix de vente dans l'industrie: Industrie manufacturière (1961=100)

L'indice des prix de vente dans l'industrie (toutes industries manufacturières) est passé de 128.5 en septembre à 129.0 en octobre, ce qui représente une augmentation de 0.4 %. En octobre 1971, il était de 122.6 (+5.2 %). Sur les 101 indices de prix industriels qui composent le total, 49 indices ont augmenté, 11 ont baissé et 41 sont restés inchangés.

Pour ce qui est de la part de chacune des industries l'indice total de l'activité manufacturière, les changements les plus appréciables sont les progressions constatées dans le groupe des produits du bois, qui continue toujours à avancer en raison de l'augmentation des prix principalement dans les scieries et les ateliers de rabotage. Dans le groupe des aliments et des boissons, les progressions relatives les plus importantes ont été enregistrées dans l'abattage et le conditionnement de la viande, les conserveries de fruits et légumes ainsi que dans les produits de la pêche. On a également enregistré une augmentation pour toutes les industries appartenant au groupe des produits du cuir. Les diminutions enregistrées au cours du mois ont été relativement peu importantes, sauf dans le cas du matériel de transport où il y a eu une baisse dans la fabrication des véhicules automobiles, attribuable à l'évaluation des changements de qualité des automobiles 1973.

General Wholesale Price Index (1935-39=100)

The general wholesale price index rose 1.4 % in October to 318.5 from the September index of 314.0. It was 9.3 % higher than the October 1971 index of 291.3. Five major group indexes were higher, while three declined. The general wholesale index, unlike the industry selling price index, includes prices of crude materials. It also has relatively few end product prices.

The vegetable products group index rose 2.5 % in October to 259.2 from 252.9 on higher prices for grains, tea, coffee and cocoa, vegetable oils and sugar and its products. The price of wheat rose 14 % between September and October, and was up 34 % from July. An advance of 2.5 % to 454.5 from 443.5 in the wood products group index reflected price increases for spruce, cedar and fir. Higher prices for pipe and tubing, wire and rolling mill products were chiefly responsible for an increase of 1.3 % to 327.4 from 323.2 in the iron products group index. The animal products group index moved 1.0 % higher to 380.2 from 376.4 on price increases for leather, livestock, hides and skins, and cured meats. An increase of 1.0 % to 283.8 from 280.9 occurred in the textile products group index on price increases for imported and domestic raw wool and raw cotton.

Slight decreases occurred in three major group indexes; non-ferrous metals to 271.1 from 271.6, chemical products to 245.2 from 245.6 and non-metallic minerals to 234.6 from 234.8.

The following table shows some of the more noteworthy changes:

Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros a progressé de 1.4 %, passant de 314.0 en septembre à 318.5 en octobre. C'est donc une augmentation de 9.3 % par rapport à l'indice d'octobre 1971 qui était à 291.3. Sur les huit indices des groupes d'activité, cinq ont augmenté et trois ont diminué. L'indice général des prix de gros, à l'opposé de l'indice des prix de vente dans l'industrie, porte sur le prix de certains produits bruts. De même, il ne comprend seulement que quelques produits finis.

L'indice des produits d'origine végétale a progressé de 2.5 %, passant de 252.9 à 259.2 en octobre, par suite de l'augmentation du prix des céréales, du thé, du café et du cacao, des huiles végétales, du sucre et de ses dérivés. Le prix du blé a augmenté de 14 % entre septembre et octobre et de 34 % entre juillet et octobre. La progression de 2.5 % de l'indice des produits du bois, qui est passé de 443.5 à 454.5, est attribuable à l'augmentation du prix de l'épinette, du thuya et du sapin. La hausse du prix des tubes et tuyaux, du fil métallique et des produits des laminoirs est la principale raison de l'augmentation de 1.3 % de l'indice des produits du fer, qui est passé de 323.2 à 327.4. L'indice des produits d'origine animale a progressé de 1.0 %, passant de 376.4 à 380.2, par suite de l'augmentation du prix du cuir, du bétail, des peaux et des viandes fumées. L'augmentation de 1.0 % de l'indice du groupe des produits textiles, passé de 280.9 à 283.8, est imputable à la hausse du prix de la laine brute et du coton brut canadiens et importés.

On a enregistré de faibles diminutions dans les trois principaux groupes: l'indice des produits métalliques non ferreux est passé de 271.6 à 271.1, celui des produits chimiques de 245.6 à 245.2 et celui des minéraux non métalliques de 234.8 à 234.6.

Le tableau ci-dessous fait apparaître quelques uns des changements les plus notables.

Commodity group and sub-group Groupe et sous-groupe de produits	Percentage changes - Taux de variation		
	Oct. 1972 Sept. 1972	Oct. 1971 Sept. 1971	Oct. 1972 Oct. 1971
Vegetable products group - Groupe des produits d'origine végétale	+ 2.5	- 0.5	+ 11.9
Grains - Céréales	+ 10.2	- 3.7	+ 32.5
Rubber, raw - Caoutchouc brut	+ 4.7	+ 1.7	- 3.2
Vegetable oils - Huiles végétales	+ 3.0	+ 5.4	- 18.0
Tea, coffee and cocoa - Thé, café et cacao	+ 1.4	- 1.1	+ 13.4
Sugar and its products - Sucre et dérivés	+ 0.7	+ 4.4	+ 32.8
Tobacco, unmanufactured - Tabac brut	- 1.5	- 0.3	- 3.7
Wood products group - Groupe des produits du bois	+ 2.5	- 0.3	+ 13.1
Spruce - Épinette	+ 11.1	- 4.1	+ 58.1
Fir - Sapin	+ 5.7	+ 1.3	+ 12.6
Pine - Pin	+ 4.2	- 0.9	+ 25.1
Cedar - Thuya	+ 3.7	- 4.7	+ 51.3
Hardwoods - Bois durs	+ 3.5	- 0.2	+ 17.8
Iron products group - Groupe des produits du fer	+ 1.3	+ 0.3	+ 2.6
Pipe and tubing - Tubes et tuyaux	+ 3.2	+ 1.7	+ 4.0
Wire - Fil métallique	+ 2.6	-	+ 4.5
Rolling mill products - Produits des laminoirs	+ 2.1	+ 0.1	+ 3.1
Animal products group - Groupe des produits d'origine animale	+ 1.0	+ 0.3	+ 14.7
Hides and skins - Peaux	+ 18.2	+ 7.0	+ 144.4
Leather - Cuir	+ 14.8	-	+ 62.4
Meats, cured - Viandes fumées	+ 2.5	+ 0.9	+ 31.5
Livestock - Bétail	+ 1.0	+ 0.4	+ 17.8
Eggs - Oeufs	- 4.0	- 4.9	+ 24.1
Meats, fresh - Viandes salées	- 1.4	+ 1.9	+ 10.6
Textile products group - Groupe des produits du textile	+ 1.0	+ 0.6	+ 7.4
Wool raw, domestic - Laine brute canadienne	+ 74.5	-	+ 140.6
Wool raw, imported - Laine brute importée	+ 36.5	- 0.6	+ 102.1
Cotton, raw - Coton brut	+ 1.9	+ 1.3	+ 13.3

In the same period, the index of mining stock prices fell 0.8 % to 115.4 with gold dropping 3.4 % to 121.7 and base metals increasing 0.8 % to 112.9.

Of the two supplementary price indexes, uranium showed a decrease of 2.1 % to 183.3 and primary oils and gas increased 0.4 % to 540.1.

The preferred stock index fell 2.1 % to 71.0 from 72.5 in August.

Thirty Industrial Materials Price Index (1935-39=100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, advanced 4.7% to 317.4 in October from the revised September index of 303.2. Prices were higher for eleven commodities, lower for three and unchanged for sixteen. Principal changes included increases for raw wool, beef hides, linseed oil, spruce lumber, domestic wheat, raw rubber, rosin, oats, hogs and raw sugar while decreases were recorded for raw cotton and steers.

Canadian Farm Products Price Index (1935-39=100)

The price index of Canadian farm products at terminal markets advanced 0.7 % to 293.7 in October from the revised September index of 291.6. An increase of 0.9 % to 194.8 from 193.1 in the field products index reflected higher prices for hay and potatoes on both Eastern and Western markets, and for corn, oats and barley in the East and flax and rye in the West. Lower prices were shown for tobacco in the East. The animal products index advanced 0.6 % to 392.6 from 390.2 on higher prices for raw wool, lambs, hogs and fluid milk on both markets and for lambs in the West. Lower prices were shown for eggs on both markets, and for steers in the East.

Consumer Prices Movements

The Consumer Price Index for Canada (1961=100) rose 0.1 % to 142.0 in October from 141.8 in September, the same percentage increase as was recorded between these two months in 1970 and 1971. Food prices, which usually move downward between September and October, declined 1.0 % in the latest month. However, the index for all items excluding food increased 0.6 % mainly as a result of advances in the Clothing index of 1.5 % and in the components for Housing and for Health and Personal Care of 0.8 %. The Recreation and Reading index rose 0.1 %, but the Transportation component decreased 0.2 %. No change was recorded in the Tobacco and Alcohol index. Between October 1971 and October 1972, the All-Items Index advanced 5.3 %.

The Food index, which normally declines at this time of year, fell 1.0 % to 145.3 in October from 146.7 in September. In the latest month, the price level of food consumed at home fell 1.3 % mainly in response to lower quotations for fruit, vegetables and beef, but restaurant meal prices rose 0.6 % as increases were recorded in a number of cities across the country. Fruit prices, on average, moved down 4.9 % mainly as a result of seasonally lower quotations for apples and some other fresh fruit; in contrast, most canned, dried and frozen fruit rose in price. The vegetable index declined 3.0 % as lower prices for many of the fresh items surveyed outweighed increases for a number of canned and frozen vegetables. Over the twelve month period since October 1971, the vegetable and fruit indexes increased by more than 13 % and 7 %, respectively. In the latest month, the meat, fish and poultry index advanced 0.5 %. Pork rose 1.6 % with most cuts

Au cours de la même période, l'indice des titres miniers a baissé de 0.8 % pour s'inscrire à 115.4, les aurifères diminuant de 3.4 % pour se fixer à 121.7 et les métaux communs augmentant de 0.8 % pour s'établir à 112.9.

Pour ce qui est des deux indices supplémentaires, l'uranium a diminué de 2.1 % pour atteindre 183.3 et le pétrole et les gaz primaires ont avancé de 0.4 % pour se fixer à 540.1.

L'indice des actions privilégiées a baissé de 2.1 %, tombant de 72.5 en août à 71.0 en septembre.

Indices des prix de trente produits industriels (1935-39=100)

L'indice des prix de trente produits industriels, calculé sous forme de moyenne géométrique non pondérée, a augmenté de 4.7% passant de 303.2 indice révisé en septembre à 317.4 en octobre. Les prix de 11 produits ont augmenté, ceux de trois produits ont diminué et ceux de 16 produits sont restés inchangés. Parmi les principaux changements, on a enregistré une augmentation du prix de la laine brute, des peaux de boeuf, de l'huile de lin, de l'épinette, du blé canadien, du caoutchouc brut, de la résine, de l'avoine, du porc et du sucre brut, alors qu'on observait une diminution du prix du coton brut et des bouvillons.

Indice des prix des produits agricoles canadiens (1935-39=100)

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a progressé de 0.7 %, passant de 291.6 (indice révisé) en septembre à 293.7 en octobre. L'indice des prix des produits de la terre a progressé de 0.9 %, passant de 193.1 à 194.8 par suite de la hausse du prix du foin et des pommes de terre sur les marchés de l'Est et de l'Ouest et du maïs, de l'avoine et de l'orge dans l'Est et du lin et du seigle dans l'Ouest. On a constaté une diminution du prix du tabac dans l'Est. L'augmentation de 0.6 % de l'indice de produits d'origine animale, qui passe de 390.2 à 392.6, est imputable à la hausse du prix de la laine brute, du mouton, du porc et du lait de consommation sur les deux marchés et du mouton dans l'Ouest. On a constaté une diminution du prix des oeufs sur les deux marchés et des bouvillons dans l'Est.

Mouvements des prix à la consommation

L'indice des prix à la consommation pour le Canada (1961=100) a augmenté de 0.1 %, passant de 141.8 en septembre à 142.0 en octobre, soit la même augmentation proportionnelle que celle qui avait été enregistrée entre ces deux mois en 1970 et en 1971. Le prix des aliments, qui baisse habituellement de septembre à octobre, a diminué de 1.0 % le mois dernier. Toutefois, l'indice de l'ensemble des éléments (sauf les aliments) a augmenté de 0.6 % principalement à cause de la hausse de 1.5 % de l'indice de l'habillement et de 0.8 % des éléments de habitation et soins personnels et de santé. L'indice des loisirs et de la lecture a augmenté de 0.1 %, mais celui de transports a diminué de 0.2 %. On n'a enregistré aucune variation de l'indice des tabacs et alcools. D'octobre 1971 à octobre 1972, l'indice synthétique a avancé de 5.3 %.

L'indice de l'alimentation, qui baisse normalement à temps-ci de l'année, a diminué de 1.0 %, passant de 146.7 en septembre à 145.3 en octobre. Au cours du dernier mois, le niveau des prix des aliments consommés à la maison a diminué de 1.3 % principalement à cause de la diminution du prix des fruits, des légumes et du boeuf; toutefois le prix des repas pris au restaurant a augmenté de 0.6 % par suite des majorations qu'on a enregistrées dans un certain nombre de villes à l'intérieur du pays. Le prix des fruits a diminué, en moyenne, de 4.9 % principalement à cause de la baisse saisonnière du prix des pommes et de certains autres fruits frais; en revanche le prix de la plupart des fruits en conserve, desséchés et congelés a augmenté. L'indice des légumes a diminué de 3.0 % en raison de la diminution du prix de bon nombre de produits frais ayant été supérieur à l'augmentation du prix d'un certain nombre de légumes en conserve et congelés. Par rapport à octobre 1971, les indices des légumes et des fruits ont respectivement augmenté de plus de 13 % et 7 %. Au cours du mois dernier, l'indice

contributing to the advance and chicken prices increased 3.0 %. Beef, however, fell 1.2 % as special prices took effect on some cuts in a number of cities. Since October 1971, the meat, fish and poultry index rose over 15 % with pork prices advancing, on average, more than 28 %. Between September and October, egg prices fell 1.7 %, but were nevertheless over 14 % above their level of a year previous. The bakery and cereal products index rose 0.3 % in the latest month as most items surveyed, including bread, recorded increases. Small price advances were also registered for some dairy products, including fluid milk which rose in Winnipeg and St. John's. Most other foodstuffs, including sugar, coffee, soft drinks and infants' food recorded increases in the latest month, but there were some decreases in a few items including jam, pickles and tea bags. In the twelve months to October 1972, the Food index advanced 9.2 %, with the price of food consumed at home increasing 9.5 % and that for restaurant meals 7.4 %.

The Housing index advanced 0.8 % to 145.2 in October from 144.1 in September as a result of increases of 1.0 % and 0.2 % in the shelter and in the household operation components, respectively. The shelter advance was mainly attributable to a 1.5 % increase in the homeownership element; rents, in contrast, rose 0.2 %. Among household operation items, a number of household supplies, including detergent, soap flakes and toilet paper were higher in price, and furniture quotations, on average, rose 0.2 %. The telephone index registered a marginal increase as higher rates were recorded in Saint John. On the other hand, the level of prices for household textiles, utensils and equipment moved down slightly since the preceding month. Between October 1971 and October 1972, the housing index advanced 4.8 %.

The Clothing index advanced 1.5 % to 134.4 in October from 132.4 in September, reflecting an upward movement in prices that usually occurs between these two months. Both women's and children's wear price levels advanced, on average, 2.6 % in the latest month, partly as a result of higher quotations for a number of outerwear items and partly because of the discontinuation of sales which had been in effect in September on a range of non-seasonal apparel. The men's wear index advanced 0.8 % because of higher prices for such items as suits, slacks, socks and both work and sport shirts; on the other hand, the price level for business shirts was lower owing to sales in some cities. Footwear prices rose 0.5 % chiefly as a result of higher quotations for men's shoes. Piece goods' prices and jewellery prices also advanced in the latest month. In the twelve months to October 1972, the Clothing index rose 3.1 %.

The Transportation index moved down 0.2 % to 134.1 in October from 134.4 in September as a result of lower price levels for inter-city travel and for automobile operation. A 1.1 % reduction in the travel component was entirely due to a decline in the train fares index which normally occurs between these two months, and which more than offset some increases in air and in inter-city bus fares. A 0.2 % decrease in the automobile operation component, resulting from lower gasoline quotations in a number of Quebec and Ontario cities, brought gasoline prices to an average level slightly below that of twelve months earlier. On the other hand, motor oil quotations in the latest month were higher in many centres across the country and stood 4.3 % above their level of a year ago. In the twelve months to October 1972, the Transportation index rose 2.3 %.

The Health and Personal Care index advanced 0.8 % to 151.2 in October from 150.0 in September. The health

la viande, du poisson et de la volaille a augmenté de 0.5 %. Le porc a augmenté de 1.6 % en raison de la hausse du prix de la plupart des morceaux; le prix du poulet a augmenté de 3.0 %. Le prix du boeuf, par contre, a diminué de 1.2 % par suite des prix spéciaux sur certains morceaux dans un certain nombre de villes. Depuis octobre 1971, l'indice de la viande, du poisson et de la volaille a augmenté de plus de 15 %, le porc enregistrant une hausse moyenne de plus de 28 %. De septembre à octobre, le prix des oeufs a diminué de 1.7 %, mais il dépassait néanmoins de plus de 14 % celui d'il y a un an. L'indice des produits céréaliers et de boulangerie a augmenté de 0.3 % au cours du mois dernier par suite d'une augmentation de la plupart des éléments, y compris le pain. On a également enregistré de petites augmentations du prix de certains produits laitiers y compris celui du lait liquide qui a augmenté à Winnipeg et à St-Jean (I.-N.). La plupart des autres produits alimentaires, y compris le sucre, le café, les boissons gazeuses et la nourriture pour bébés ont connu des augmentations au cours du mois dernier; on a toutefois enregistré certaines diminutions du prix de quelques produits comme les confitures, les marinades et le thé en sachet. Par rapport à octobre 1971, l'indice de l'alimentation a avancé de 9.2 %, le prix des aliments consommés à la maison augmentant de 9.5 % et celui des repas pris au restaurant de 7.4 %.

L'indice de l'habitation a avancé de 0.8 %, passant de 144.1 en septembre à 145.2 en octobre, par suite d'augmentations de 1.0 % et de 0.2 % au chapitre du logement et de l'entretien de l'habitation. La hausse de l'indice du logement est principalement attribuable à une augmentation de 1.5 % des frais de propriété; les loyers, par contre, ont augmenté de 0.2 %. Parmi les éléments qui entrent dans l'entretien du ménage, il y a eu augmentation du prix d'un certain nombre de produits ménagers, y compris les détergents, le savon en flocons et le papier hygiénique, et le prix des meubles a avancé en moyenne, de 0.2 %. L'indice du téléphone a enregistré une légère augmentation par suite de la majoration des tarifs à St-Jean (N.-B.). Par contre, le prix des textiles, des ustensiles et de l'équipement ménager a légèrement diminué par rapport au mois dernier. D'octobre 1971 à octobre 1972, l'indice de l'habitation a avancé de 4.8 %.

L'indice de l'habillement a augmenté de 1.5 %, passant de 132.4 en septembre à 134.4 en octobre, ce qui représente une hausse normale des prix pour ce temps-ci de l'année. Le prix des vêtements tant pour dames que pour enfants a augmenté, en moyenne, de 2.6 % au cours du mois dernier, en partie à cause de la fin des soldes de septembre sur une gamme d'articles non saisonniers. L'indice des vêtements pour hommes a avancé de 0.8 % par suite d'une majoration du prix d'articles comme les complets, les pantalons, les chaussettes et les chemises de travail et de sport; par contre, le prix des chemises de travail habillées a diminué par suite des soldes dans certaines villes. Le prix des chaussures a connu une baisse de 0.5 %; cette diminution est en majeure partie attribuable à la hausse du prix des chaussures pour hommes. Le prix des tissus à la verge et des bijoux ont également avancé au cours du mois dernier. Par rapport à octobre 1971, l'indice de l'habillement a augmenté de 3.1 %.

L'indice des transports a diminué de 0.2 %, passant de 134.4 en septembre à 134.1 en octobre, par suite d'une baisse des tarifs de transport interurbain et des frais d'automobile. La diminution de 1.1 % de l'élément "voyages" est entièrement attribuable à une baisse de l'indice des billets de train (baisse normale pour ce mois-ci) qui a été largement supérieure à certaines augmentations du prix des billets d'avion et d'autocar. La diminution de 0.2 % des frais d'automobile est attribuable à une baisse du prix de l'essence dans un certain nombre de villes du Québec et de l'Ontario; elle a porté le prix de l'essence à un niveau moyen légèrement inférieur à celui d'il y a un an. Par contre, le prix de l'huile à moteur au cours du dernier mois a été supérieur dans bon nombre de centres à l'étendue du pays et s'établissait à 4.3 % de plus qu'il y a un an. Par rapport à octobre 1971, l'indice des transports a augmenté de 2.3 %.

L'indice des soins personnels et de santé a avancé de 0.8 %, passant de 150.0 en septembre à 151.2 en octobre.

care component increased 1.5 % in response to generally higher dentists' fees, while the personal care index rose 0.3 % owing to increased prices for toilet soap, toothpaste and razor blades. Between October 1971, and October 1972, the Health and Personal Care index advanced 5.3 %.

The Recreation and Reading index edged up 0.1 % to 140.3 in October from 140.2 in September because of higher charges for admission to sporting events. In particular, hockey ticket prices rose in Halifax, Montreal, Regina, Saskatoon, Calgary and Edmonton, while bowling fees increased in a number of cities including Toronto, Winnipeg and Vancouver. In October 1972, the Recreation and Reading index stood 2.9 % above its level of October 1971.

In October 1972, the Tobacco and Alcohol index was unchanged from its September 1972 level of 132.9 and stood 2.5 % above its level of October 1971.

Consumer price index items, when classified by commodities and services, offer another view of the incidence of the change in prices. In the latest month, the services index advanced 0.7 % because of higher charges for shelter services and for admission to sporting events, together with increased dentists' fees. On the other hand, the total commodities index declined 0.2 % as the 1.0 % reduction in the food price level outweighed a 0.6 % advance in the price of non-durable commodities other than food which was chiefly attributable to higher quotations for clothing, household cleaning supplies and toiletries. Between October 1971 and October 1972, the indexes for total services and total commodities advanced 5.3 % and 5.2 % respectively.

Security Price Indexes (1961=100)

The Investors index of common stock prices moved down 0.8 % over September to 178.9: this is the second monthly decrease since the all time high of 182.2 in August. Each of the three major groups registered a loss with industrials easing 0.3 % to 186.8, utilities declining 3.1 % to 149.7 (the lowest since December 1971), and finance decreasing 1.5 % to 183.0. Amongst the thirteen industrial sub-groups, losses outnumbered gains: the ten losses ranged from 0.2 % to 246.4 for beverages, to 5.2 % to 122.4 for industrial mines; the three gains were 5.0 % to a peak of 326.0 for petroleum, 2.4 % to 120.6 (the highest figure since August 1959) for construction, and 2.0 % to 348.6 for printing and publishing. In utilities, all sub-groups declined without exception: the range of the decreases was from 1.6 % to 86.3 for telephone (the lowest figure for this index since July 1970), to 5.3 % to 117.0 for electric power. A decline in the finance index resulted from a loss in both sub-groups: banks declined 1.9 % to 209.0, investment and loans eased 0.3 % to 145.0.

In the same period, the index of Mining stock prices moved down 5.5 % to 109.0 with golds and base metals falling 5.8 % to 114.6 and 5.3 % to 106.9 respectively.

Of the two supplementary price indexes, uraniums went down 4.2 % to 175.6 while primary oil and gas gained 0.5 % to an all time high of 543.0.

The preferred stock index rose 0.1 % to 71.1.

L'élément soins de santé a avancé de 1.5 % par suite d'une augmentation générale des frais de dentiste, alors que l'élément soins personnels a avancé de 0.3 % à cause d'une majoration du prix du savon de toilette, de la pâte dentifrice et des lames de rasoir. D'octobre 1971 à octobre 1972, l'indice des soins personnels et de santé a avancé de 5.3 %.

L'indice des loisirs et de la lecture a légèrement augmenté de 0.1 %, passant de 140.2 en septembre à 140.3 en octobre, par suite d'une majoration des frais d'admission aux activités sportives. Le prix de billets de hockey, en particulier, a augmenté à Halifax, à Montréal, à Regina, à Saskatoon, à Calgary et à Edmonton, tout comme celui des salles de quilles dans un certain nombre de villes, y compris Toronto, Winnipeg et Vancouver. En octobre 1972, l'indice des loisirs et de la lecture a avancé de 2.9 % par rapport à octobre 1971.

En octobre 1972, l'indice des tabacs et alcools est resté inchangé par rapport à son niveau de 132.9 en septembre 1972 et a augmenté de 2.5 % par rapport à octobre 1971.

Si l'on classe les articles qui entrent dans l'indice des prix à la consommation par biens et services, on obtient une image différente du mouvement des prix à la consommation. Ainsi, l'indice des services a avancé de 0.7 % au cours du mois dernier par suite de la majoration du prix des services de logement et de l'admission aux activités sportives et d'une augmentation des frais de dentiste. L'indice des biens, par contre, a diminué de 0.2 %, la baisse de 1.0 % du prix des aliments ayant été supérieure à l'augmentation de 0.6 % du prix des biens non durables (sauf les aliments), hausse principalement attribuable à la majoration du prix des vêtements, des produits d'entretien ménager et des articles de toilette. D'octobre 1971 à octobre 1972, les indices des services et des biens ont respectivement avancé de 5.3 % et 5.2 %.

Indices des cours des valeurs mobilières (1961=100)

L'indice des cours de placements des actions ordinaires a baissé de 0.8 % en septembre pour s'établir à 178.9: c'est la deuxième diminution mensuelle depuis août, mois où l'indice avait atteint un record de 182.2. Les indices des trois groupes ont baissé: celui des valeurs industrielles, de 0.3 % pour s'établir à 186.8, celui des services d'utilité publique, de 3.1 % pour s'établir à 149.7 (l'indice le plus bas depuis décembre 1971) et celui des finances, de 1.5 % pour atteindre 183.0. Dans le cas des treize sous-groupes des valeurs industrielles, le nombre des diminutions a été supérieur à celui des progressions: les dix baisses se sont échelonnées entre 0.2 % (dans le cas des boissons, qui sont tombées à 246.4) et 5.2 % (dans le cas des mines industrielles, qui sont passées à 122.4); les trois progressions ont été: le pétrole, augmentant de 5.0 % pour atteindre un sommet de 326.0, la construction, augmentant de 2.4 % pour atteindre 120.6 (le plus haut niveau depuis août 1959) et l'impression et l'édition, progressant de 2.0 % pour se fixer à 348.6. Dans le cas des services d'utilité publique, tous les sous-groupes ont enregistré une baisse: les diminutions se sont échelonnées entre 1.6 % (dans le cas des téléphones, qui sont tombés à 86.3, soit le plus bas niveau depuis juillet 1970) et 5.3 % (dans le cas de l'énergie électrique, qui est passée à 117.0). Dans le cas des finances, l'indice a diminué par suite d'une baisse de ces deux sous-groupes: les banques ont diminué de 1.9 % pour se fixer à 209.0 et les prêts et placements ont baissé de 0.3 % pour passer à 145.0.

Au cours de la même période, l'indice du cours des titres miniers a diminué de 5.5 % pour s'établir à 109.0 par suite d'une baisse de l'or 5.8 % (114.6) et des métaux communs 5.3 % (106.9).

Dans le cas des deux indices supplémentaires, l'uranium a diminué de 4.2 % pour se fixer à 175.6 alors que le pétrole et le gaz primaires ont avancé de 0.5 % pour atteindre un niveau record de 543.0.

L'indice des actions privilégiées a augmenté de 0.1 % pour passer à 71.1.

TABLE 1. Summary of Current Price Indexes
TABLEAU 1. Récapitulation des indices des prix courants

	Indexes Indices				Percentage changes Variation proportionnelle		
	October 1972 — Octobre	September 1972 — Septembre	October 1971 — Octobre	September 1971 — Septembre	Oct. 1972 Sept. 1972 Oct. 1971 Sept. 1971	Oct. 1971 Sept. 1971 Oct. 1971 Sept. 1971	Oct. 1972 Oct. 1971 Oct. 1972 Oct. 1971
Industrial price indexes — Indices des prix dans l'industrie							
Industry selling price index: manufacturing — 1961=100(1) — Indices des prix de vente dans l'industrie: industries manufacturières:							
General wholesale index — (1935-39=100)(2) — L'indice général de gros	129.0	128.5	122.6	122.5	+ 0.4	+ 0.1	+ 5.2
Vegetable products — Substances végétales	318.5	314.0	291.3	291.4	+ 1.4	--	+ 9.3
Animal products — Produits animaux	259.2	252.9	231.6	232.8	+ 2.5	+ 0.5	+ 11.9
Textile products — Produits textiles	380.2	376.4	331.5	330.6	+ 1.0	+ 0.3	+ 14.7
Wood products — Produits du bois	283.8	280.9	264.3	262.6	+ 1.0	+ 0.6	+ 7.4
Iron products — Produits du fer	454.5	443.5	401.7	403.0	+ 2.5	+ 0.3	+ 13.1
Non-ferrous metals — Métaux non ferreux	327.4	323.2	319.0	318.1	+ 1.3	+ 0.3	+ 2.6
Non-metallic minerals — Minéraux non métalliques	271.1	271.6	259.0	260.3	- 0.2	+ 0.5	+ 4.7
Chemical products — Produits chimiques	234.6	234.8	227.4	227.1	- 0.1	+ 0.1	+ 3.2
	245.2	245.6	238.8	238.9	- 0.2	--	+ 2.7
Canadian farm products — (1935-39=100)(3) — Produits agricoles canadiens							
Eastern — Total — De l'est	293.7	291.6 ^r	260.8	262.2	+ 0.7	- 0.5	(3)
Western — Total — De l'ouest	318.7	317.1	290.3	292.1	+ 0.5	- 0.6	+ 9.8
Field — Cultures	268.8	266.2 ^r	231.4	232.3	+ 1.0	- 0.4	(3)
Animal — Animaux	194.8	193.1 ^r	166.5	169.2	+ 0.9	- 1.6	(3)
	392.6	390.2	355.2	355.1	+ 0.6	--	+ 10.5
Selected price indexes — (2) — Certains indices de prix							
Thirty industrial materials — (1935-39=100) — Trente matériaux industriels							
Residential building materials — (1961=100) — Matériaux de construction résidentielle	317.4	303.2 ^r	266.4	265.6	+ 4.7	+ 0.3	+ 19.1
Non-residential building materials — (1961=100) — Matériaux de construction non résidentielle	168.7	166.3	149.1	149.2	+ 1.4	- 0.1	+ 13.1
	145.3	144.0	136.1	136.0	+ 0.9	+ 0.1	+ 6.8
Consumer price indexes — (1961=100) — Indices des prix à la consommation							
All-items — Tous les éléments	142.0	141.8	134.9	134.7	+ 0.1	+ 0.1	+ 5.3
Food — Alimentation	145.3	146.7	133.0	133.7	- 1.0	- 0.5	+ 9.2
Housing — Habitation	145.2	144.1	138.6	137.7	+ 0.8	+ 0.7	+ 4.8
Clothing — Habillement	134.4	132.4	130.3	129.6	+ 1.5	+ 0.5	+ 3.1
Transportation — Transports	134.1	134.4	131.1	131.0	- 0.2	+ 0.1	+ 2.3
Health and personal care — Soins personnels et de santé	151.2	150.0	143.6	142.6	+ 0.8	+ 0.7	+ 5.3
Recreation and reading — Loisirs et lectures	140.3	140.2	136.3	136.0	+ 0.1	+ 0.2	+ 2.9
Tobacco and alcohol — Tabacs et alcools	132.9	132.9	129.6	129.6	--	--	+ 2.5
Security price indexes — (1961=100) — Indices des cours des valeurs mobilières							
Investors index — Total — Indices des portefeuillistes	178.9	180.4	139.3	149.4	- 0.8	- 6.8	+ 28.4
Industrials — Total — Industriels	186.8	187.3	140.1	151.7	- 0.3	- 7.6	+ 33.3
Industrial mines — Mines industrielles	122.4	128.1	103.7	121.1	- 5.2	- 14.4	+ 18.0
Foods — Aliments	148.1	149.1	119.0	129.1	- 0.7	- 7.8	+ 24.5
Beverages — Boissons gazeuses	246.4	247.0	181.2	191.6	- 0.2	- 5.4	+ 36.0
Textiles and clothing — Textiles et vêtements	170.7	177.9	106.7	114.4	- 4.0	- 6.7	+ 60.0
Pulp and paper — Pâte et papier	99.4	103.0	77.1	89.3	- 3.5	- 13.7	+ 28.9
Printing and publishing — Impression et édition	348.6	341.8	239.9	248.1	+ 2.0	- 3.3	+ 45.3
Primary metals — Métaux primaires	112.0	113.6	79.2	88.2	- 1.4	- 10.2	+ 41.4
Metal fabricating — Fabrications des métaux	195.4	198.0	152.4	165.4	- 1.3	- 7.9	+ 28.2
Non-metallic minerals — Minéraux non métalliques	174.8	177.0	134.2	141.5	- 1.2	- 5.2	+ 30.3
Petroleum — Pétrole	326.0	310.4	233.3	237.9	+ 5.0	- 1.9	+ 39.7
Chemicals — Produits chimiques	109.2	114.6	78.2	86.0	- 4.7	- 9.1	+ 39.6
Construction — Construction	120.6	117.8	52.1	56.4	+ 2.4	- 7.6	+ 131.5
Retail trade — Commerce de détail	161.8	168.2	124.8	135.4	- 3.8	- 7.8	+ 29.6
Utilities — Total — Services publics	149.7	154.5	140.0	146.5	- 3.1	- 4.4	+ 6.9
Pipeline — Pipe-line	182.6	185.7	161.9	170.5	- 1.7	- 5.0	+ 12.8
Transportation — Transport	298.1	311.6	246.9	255.2	- 4.3	- 3.3	+ 20.7
Telephone — Téléphone	86.3	87.7	89.6	91.8	- 1.6	- 2.4	- 3.7
Electric power — Énergie électrique	117.0	123.5	109.8	116.0	- 5.3	- 5.3	+ 6.6
Gas distribution — Distribution du gaz	183.0	187.4	201.0	217.9	- 2.3	- 7.8	- 9.0
Finance — Total — Finances	183.0	185.8	137.3	144.9	- 1.5	- 5.2	+ 33.3
Banks — Banques	209.0	213.0	159.8	169.6	- 1.9	- 5.8	+ 30.8
Investment and loan — Placements et prêts	145.0	145.5	103.0	106.8	- 0.3	- 3.6	+ 40.8
Mining stocks — Actions minier							
General index — Indice général	109.0	115.4	88.1	103.5	- 5.5	- 14.9	+ 23.7
Gold — Or	114.6	121.7	78.8	95.3	- 5.8	- 17.3	+ 45.4
Base metals — Métaux communs	106.9	112.9	94.0	108.9	- 5.3	- 13.7	+ 13.7
Supplementary indexes — Indices supplémentaires							
Uranium — L'uranium	175.6	183.3	122.0	142.7	- 4.2	- 14.5	+ 43.9
Primary oils and gas — Pétrole et gaz primaires	543.0	540.1	429.5	481.8	+ 0.5	- 10.9	+ 26.4

- 1) Gross weighted, including inter-industry shipments. For explanation see page 82. — Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication, voir page 82.
- 2) Indexes for 1972 are subject to revision. — Les indices pour 1972 sont sujets à révision.
- 3) Year to year percentage change not shown since these indexes are not comparable. Indexes subsequent to July 1970 are subject to revision. See notes page 76 for details of Western grain prices. — La variation proportionnelle d'une année à l'autre n'est pas indiquée étant donné que ces indices ne sont pas comparables. Les indices postérieurs à juillet 1970 sont sujets à révision. Voir les renvois de la page 76 pour les prix détaillés des grains de l'Ouest.

(1) Indexes for 1972 are subject to revision. - Les indices pour 1972 sont sujets à révision.

(2) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. - Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels:

	Old Series - Ancienne série	New series - Nouvelle série
December - 1970 - Décembre	95.1	92.3
January - 1971 - Janvier	95.1	92.1
Average - 1971 - Moyenne	95.2	91.8

(1) Includes gold. - Y compris l'or. (2) Consists of iron products and non-ferrous metals groups above but excluding gold. - Se compose des groupes élémentaires des produits du fer et des produits des métaux non ferreux moins l'or. (3) These two series comprise the General Wholesale Index. - Ces deux séries comprennent l'indice général de gros. (4) Excludes gold. - Sauf l'or. (5) All indexes for current year are subject to revision. - Les données de l'année courante sont sujettes à révision.

¹⁾ Final to July 1971. See page 82 for details on Western grain prices and specific publications wherein final indexes or earlier years may be found. - Indices définitifs jusqu'en juillet 1971. Pour des données détaillées sur le prix des céréales de l'Ouest, voir page 82 ainsi que les publications spéciales qui contiennent les derniers indices ou ceux des années précédentes.

²⁾ All indexes for current year are subject to revision. - Les données de l'année courante sont sujettes à révision.

TABLE 6. Wholesale Price Indexes of Selected Primary Commodities(1)

TABLEAU 6. Indices des prix de gros de certains produits bruts(1)

(1935-39=100)

Primary commodities — Produits bruts	Months — Mois				Annual averages — Moyenne annuelle		
	Oct. 1972	Sept. 1972	Oct. 1971	Sept. 1971	1971	1970	1969
Asbestos, crude — Amiante brut	429.7	429.7	429.7	420.6	411.6	399.7
Beans, cocoa — Graines de cacao	726.6	726.6	544.9	618.0	582.7	752.7	1,032.8
Beans, coffee — Grains de café	391.5	390.2	300.4	301.3	317.4	391.7	302.6
Copper, electrolytic — Cuivre électrolytique ...	463.8	463.8	501.1	501.1	492.5	541.6	483.6
Cotton, raw — Coton brut	340.7	346.1	300.6	296.8	292.1	282.0	276.3
Eggs — Oeufs	147.6	153.7	118.9	125.0	122.1	139.6	161.7
Fruits, fresh — Fruits frais	227.9	229.7	242.8	232.6	230.0	229.6	225.8
Grains — Céréales	239.2	217.1	180.5	187.4	192.3	193.7	200.4
Hides and skins — Cuirs et peaux vertes	390.3	330.3	159.7	149.2	157.6	171.4	185.6
Lead, electrolytic — Plomb électrolytique	335.4	335.4	283.0	283.0	283.0	331.0	318.8
Livestock — Bétail	454.9	450.5	386.0	384.6	386.0	396.2	400.3
Onions — Oignons	243.3	288.9	169.4	233.4	180.8	261.6	221.9
Potatoes — Pommes de terre	227.3	224.3	155.6	164.9	194.2	247.2	170.5
Rubber, raw — Caoutchouc brut	113.0	107.9	116.7	114.8	117.4	140.8	179.3
Scrap iron and steel — Déchets de fer et d'acier	270.0	270.0	267.3	267.3	284.2	328.9	250.0
Silver — Argent	454.8	450.1	347.0	368.5	405.6	478.1	497.5
Steers — Bouvillons	558.1	563.1	540.9	544.9	548.8	510.8	496.6
Sugar, raw — Sucre brut	256.8	253.8	170.2	160.7	178.7	160.9	144.1
Tin — Étain	346.8	347.2	324.6	325.6	324.2	349.6	338.0
Wool, raw domestic — Laine brute indigène	338.1	193.7	140.5	140.5	141.1	152.4	169.1
Wool, raw, imported — Laine brute importée	269.4	197.3 ^r	133.3	134.1	135.0	149.3	163.0
Zinc, prime, western — Zinc de première qualité, de l'Ouest	422.5	422.5	378.0	378.0	357.6	341.0	326.1

Wool — Laine	134.3	131.7	131.1	129.8	129.0	127.4	125.2
Cotton — Coton	128.3	127.7	125.1	124.8	124.0	121.9	120.0
Synthetic — Tissus synthétiques	112.3	112.4	113.6	113.5	112.7	112.5	111.7
Fur — Fourrure	145.2	134.1	140.1	136.1	135.0	138.8	139.4
Footwear — Chaussures	150.1	149.4	141.5	142.1	141.0	136.7	132.4
Leather — Cuir	153.8	153.1	143.5	144.1	143.1	138.2	133.5
Rubber and plastic — Caoutchouc et plastique	118.8	118.3	124.6	125.1	123.9	123.7	123.4
Other non-durable — Autres non-durables ..	130.3	130.0	126.8	126.7	125.7	122.0	118.7
Services:							
Total(5)	152.1	151.8	146.1	145.1	144.1	138.7	132.3
Excluding shelter — Total — Sauf logement ..	165.5	165.2	157.7	156.9	155.3	148.9	141.8

(1) For explanation see page 82. — Pour de plus amples explications, voir la page 82.

(2) Includes oranges and orange juice, grapefruit, bananas, grapes, canned pineapple, raisins, tea and coffee. — Oranges et jus d'orange, pamplemousse, bananes, raisins, ananas en conserve, raisins secs, thé et café.

(3) Includes constant weighted food component. — Comprend l'élément alimentation à pondérations constantes.

(4) Includes television and radio. — Téléviseur et radio.

(5) Excludes houses, mortgage interest and property taxes. — Excluant les maisons, les intérêts hypothécaires et les taxes foncières.

TABLE 10. Consumer Price Indexes for Canada - Selected Food Items

TABLEAU 10. Indices des prix à la consommation pour le Canada - Denrées alimentaires choisies (1961=100)

	Oct. 1972	Sept. 1972	Oct. 1971	Sept. 1971	1971	1970	1969
<u>Dairy products - Produits laitiers</u>							
Milk, fresh - Lait frais	152.5	152.2	148.9	148.3	145.1	138.9	137.1
Milk, evaporated - Lait évaporé	137.8	137.1	125.8	121.3	119.6	112.5	112.9
Powdered skim milk - Poudre de lait écrémé	162.5	162.7	149.4	144.9	139.9	130.3	128.3
Butter, creamery, first grade - Beurre de crèmerie, 1 ^{re} qualité	108.9	108.8	107.7	107.4	104.0	102.3	103.0
Cheese, plain, processed - Fromage ordinaire fondu	148.1	148.0	138.9	137.0	133.4	130.3	127.9
<u>Poultry and eggs - Volaille et oeufs</u>							
Chicken, grade A evisc. - Poulet, qualité A, éviscéré	134.5	130.6	120.1	119.4	112.0	107.7	111.2
Turkey, grade A evisc. - Dinde, qualité A, éviscérée	100.2	104.2	95.6	94.8	95.8	99.1	101.6
Eggs, fresh, grade A large - Oeufs frais, qualité A gros	104.7	106.5	91.4	92.1	87.3	99.0	109.9
Eggs, fresh, grade A medium - Oeufs frais, qualité A moyens	109.1	107.7	85.8	84.7	86.8	98.6	114.1
<u>Beef - Boeuf</u>							
Sirloin steak - Bifteck de faux filet	152.8	161.1	146.8	150.9	143.4	139.7	139.3
Round steak - Bifteck dans la ronde	163.8	161.3	145.9	147.3	148.0	143.7	135.6
Prime rib roast(1) - Rôti de plat de côtes(1)	156.7	160.4	143.5	140.9	139.9	134.4	133.5
Blade roast(2) - Rôti de haut-côté(2)	149.8	151.4	132.6	130.6	133.1	133.5	131.8
Stewing beef - Boeuf pour ragoût	157.8	159.9	147.8	146.7	145.9	142.1	138.3
Hamburg - Boeuf haché	178.9	178.2	151.7	150.6	148.5	144.8	138.8
Liver, sliced - Foie en tranches	138.8	140.7	118.1	121.1	119.1	132.3	115.3
<u>Pork - Porc</u>							
Rib chops, fresh - Côtelettes fraîches	168.0	166.4	131.8	132.7	122.7	137.2	140.8
Shoulder roast, Boston butt, fresh - Rôti dans l'épaule, soc de Boston, frais	133.8	136.1	106.2	105.8	102.4	120.5	129.9
Sausage, pure pork - Saucisse pur porc	137.6	136.0	119.5	119.9	119.6	127.2	127.4
Bacon, side, fancy, sliced, rind off - Bacon, flanc, de fantaisie, en tranches, sans couenne	116.0	110.6	75.3	75.4	76.4	102.2	101.1(6)
Ham, smoked, boneless(3) - Jambon fumé, désossé(3)	146.8	145.9	114.4	118.7	115.4	135.2	138.4
<u>Other meats - Autres viandes</u>							
Lamb, leg roast - Agneau, gigot	128.6	126.0	114.6	115.3	113.7	114.8	109.1
Veal, loin chops, rib end - Veau, côtelettes, bout de côte	202.5	197.8	166.7	166.9	165.0	162.6	151.5
Wieners or frankfurters - Saucisses de Francfort ...	129.0	128.5	120.1	120.2	119.0	121.5	120.1
Meat loaf, canned, mainly pork - Pain de viande, en conserve, principalement de porc	126.3	125.1	122.4	121.7	123.0	130.7	125.0
<u>Fish - Poisson</u>							
Cod filets, frozen(5) - Filets de morue, congelés(5)	225.9	225.2	168.2	166.4	160.6	143.3	135.4
Salmon, canned, fancy pink - Saumon, en boîte, de fantaisie, rose	153.2	150.4	147.2	146.4	143.0	144.1	129.9
<u>Fats and oils - Huiles et corps gras</u>							
Margarine	109.2	109.4	111.8	111.9	114.8	112.1	105.5
Lard, pure - Saindoux pur	120.5	119.0	115.0	110.8	111.4	118.7	103.6
Shortening	122.8	122.8	122.6	121.2	118.7	114.1	109.4
Salad dressing - Vinaigrette	111.6	110.0	106.2	105.5	105.4	104.7	102.7
<u>Cereals and bakery products - Céréales et produits de la boulangerie</u>							
Flour, white, all purpose - Farine blanche, tout usage	134.1	136.1	132.4	133.2	131.3	133.5	134.3
Corn flakes - Flocons de maïs	128.7	126.3	122.4	121.8	119.6	117.4	116.2(7)
Macaroni - Macaronis secs	128.7	128.5	127.0	126.8	126.0	126.4	119.4
Cake mix, white - Mélange à gâteaux, blanc	127.2	125.6	121.9	122.5	118.5	122.1	123.5
Bread, plain, white, wrapped, sliced - Pain blanc uni, enveloppé, coupé	138.5	138.1	132.3	131.8	130.5	125.5	123.8
Soda crackers - Craquelins	118.6	119.8	115.4	116.5	113.1	117.9	116.3
<u>Sugar and sweets - Sucre</u>							
Sugar, granulated - Sucre cristallisé	160.3	156.5	127.5	127.2	126.9	117.2	113.0
Jam, strawberry(4) - Confiture de fraises(4)	125.9	126.5	123.6	121.5	122.7	126.4	120.8
Honey, No. 1, white - Miel n° 1, blanc	177.3	174.4	129.3	127.9	127.0	127.8	125.4

See footnote(s) at end of table. - Voir renvoi(s) à la fin du tableau.

TABLE 10. Consumer Price Indexes for Canada - Selected Food Items - Concluded

TABLEAU 10. Indices des prix à la consommation pour le Canada - Denrées alimentaires choisies - fin (1961=100)

	Oct. 1972	Sept. 1972	Oct. 1971	Sept. 1971	1971	1970	1969
Fruits							
Oranges, Californian, medium size (138) - Oranges de Californie, moyennes (138)	108.5	107.5	110.5	111.3	111.9	102.5	100.5
Grapefruit, white, 48's - Pamplemousses blancs, 48	197.6	174.6	191.1	194.9	154.8	140.9	122.3
Bananas, yellow - Bananes jaunes	83.0	81.5	76.3	77.5	76.2	85.7	90.7
Apples, volume seller - Pommes du type le plus vendu	115.8	159.9	105.5	143.8	118.8	112.8	128.0

Raisins, Californian and Australian - Raisins secs de Californie et d'Australie	158.8	156.6	149.8	150.4	150.2	153.0	149.2
Vegetables - Légumes							
Potatoes, No. 1 table - Pommes de terre n° 1 de table	122.7	127.0	95.6	100.6	114.7	134.0	123.1
Onions, No. 1 cooking - Oignons n° 1 à cuire	157.7	218.1	133.9	174.1	128.5	157.4	136.4
Carrots - Carottes	106.5	115.4	92.0	110.5	123.4	109.1	108.8
Turnips, Canada No. 1 - Navet canadien n° 1	157.6	182.3	129.6	140.3	125.1	171.0	141.8
Cabbage - Chou	152.8	156.6	100.1	108.2	150.4	167.4	145.2
Tomatoes, fresh - Tomates fraîches	143.1	143.2	115.8	100.5	162.2	143.7	140.5
Celery stalks, green - Céleri en branche, vert	130.5	130.5	106.1	122.3	141.6	150.3	146.7
Lettuce, head, fresh - Laitue pommée fraîche	154.8	143.1	165.7	130.1	160.8	139.9	158.1
Green peas, frozen, fancy - Pois verts congelés, de fantaisie	122.9	123.2	119.5	118.4	118.1	116.1	115.0
Green beans, fr. cut, frozen - Haricots verts coupés, congelés	107.5	106.4	103.6	103.3	102.7	102.4	102.2
Tomatoes, canned, choice - Tomates en boîte, de choix	133.6	132.4	130.9	131.0	128.9	131.6	126.7
Peas, canned, choice - Pois en boîte, de choix	129.9	128.2	119.8	118.8	117.0	125.7	126.5
Corn, canned, cream, choice - Maïs en boîte, en crème, de choix	124.1	123.4	121.2	120.9	119.9	124.7	123.3
Infants' food, vegetable - Aliments pour bébés, légumes	139.0	136.7	129.6	125.8	124.8	118.9	120.1
Beans, with pork and tomato sauce - Haricots au porc à la sauce tomate	136.3	133.7	135.0	134.5	131.6	129.3	126.8
Soup, vegetable - Soupe aux légumes	100.2	100.4	100.3	100.0	99.3	99.7	97.9
Tomato juice, fancy - Jus de tomate de fantaisie ...	109.7	109.9	104.3	103.7	100.4	100.3	98.9(8)
Beverages - Breuvages							
Tea bags - Thé, sachets, orange pekoe	103.8	104.0	101.6	101.6	100.3	101.9	102.5
Coffee, medium quality - Café, qualité moyenne	138.6	136.2	128.6	129.3	132.2	132.4	115.5
Coffee, instant, dried - Café instantané, séché	118.7	116.9	112.6	112.6	112.3	112.9	107.2
Miscellaneous Groceries - Denrées diverses							
Tomato catsup - Ketchup aux tomates	127.6	125.4	121.9	119.9	115.9	112.6	111.6
Peanut butter, plain - Beurre d'arachides, ordinaire	133.1	132.1	136.1	137.6	136.9	139.8	125.0
Pickles, sweet, mixed - Cornichons sucrés variés ...	133.2	134.2	130.1	129.8	127.7	125.3	121.4
Jelly powders, flavoured - Gelée en poudre aromatisée	130.0	129.8	122.9	122.8	121.5	118.0	117.1

(1) Includes cuts with bone-in and boned and rolled. - Y compris les morceaux avec os, sans os et roulés.

(2) Includes cuts with blade-in and blade removed. - Y compris les morceaux avec ou sans palette.

(3) Indexes based on chain store prices in 7 cities. - Les indices sont fondés sur les prix dans les magasins à succursales multiples de 7 villes.

(4) Indexes based on prices for pectin and pure jam combined. - Les indices sont basés sur les prix de la confiture avec pectine et de la confiture pure.

(5) Indexes based on prices in 16 cities. - Les indices sont fondés sur les prix dans 16 villes.

(6) 1965=100. - 100 en 1965.

(7) 1963=100. - 100 en 1963.

(8) June 1968=100. - 100 en juin 1968.

TABLE 11. Consumer Price Indexes, Regional Cities, 1962-72(1)

TABLEAU 11. Indices des prix à la consommation, agglomérations urbaines, 1962-72(1)

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 13. — Nota: (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au Tableau 13.

For explanation see page 85. — Pour de plus amples explications, voir la page 85.

The shelter element of regional cities housing indexes moves on the basis of changes in rents only, whereas in the Canada index this movement is derived from changes in both rents and homeownership costs. See also page 85. — Au niveau des agglomérations urbaines, l'élément logement de l'indice de l'habitation varie selon les changements dans les prix des loyers; par contre, au niveau du Canada, l'élément logement tient compte à la fois des changements dans les prix des loyers et dans les frais de possession d'une maison. Voir la page 85.

Average - Moyenne							

Indexes for current year are subject to revision. - Les données de l'année courante sont sujettes à révision.

3) From Tables 18 and 19. - Provenant des Tableaux 18 et 19.

Weights used to combine wage rate series. - Coefficients de pondération utilisés pour réunir les séries sur les taux de rémunération:

Labourer - Ouvrier	46
Carpenter - Menuisier-charpentier	30
Painter - Peintre	7
Electrician - Électricien	5
Plumber - Plombier	5
Bricklayer and Mason - Briqueur et maçon	3
Sheet Metal Worker - Tôlier	2
Truck Driver - Conducteur de camion	2
Total	100

(Source: Dept. of Labour)

(Source: Ministère
du Travail)

Implicit weights of the 1961=100 arithmetically converted indexes, materials 51.9, wages 48.1. - Coefficients implicites de Pondération obtenus par conversion arithmétique à 1961=100, matériaux 51.9, main-d'oeuvre 48.1.

8) Implicit weights materials 55.1, wages 44.9. - Coefficients implicites de Pondération, matériaux 55.1, main-d'oeuvre 44.9.

National Income and Expenditure Accounts, Catalogue 13-001, quarterly. - (N° 13-001 au catalogue, trimestriel).

This series contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in contractors profit and productivity. - Cette série comprend une composante génie aussi bien qu'une composante construction: elle n'a donc pas tout à fait la même portée que l'indice synthétique pour la construction non-résidentielle. Les indices synthétiques sont corrigés des variations des profits et de la productivité des entrepreneurs.

For further detailed explanation see Prices and Price Indexes - May 1970. Pour des explications détaillées voir Prix et indices de prix - Mai 1970.

TABLE 21. Basic Union Wage Indexes for Major Construction Trades, 14 City Composite(2)

TABLE 26. Price Indexes of Electric Utility Construction, Canada, Annually 1957 Forward
1961=100

TABLEAU 26. Indice des prix à la construction dans les services d'électricité, Canada, par année depuis 1957

Item - Article	Year - An														
	1957	1958	1959	1960	1961	1962	1963	1964	1965	1966	1967	1968	1969	1970	1971P
Distribution systems - Total(6) - Réseaux de distribution	96.5	93.2	96.8	100.3	100.0	101.8	102.5	104.6	107.1	112.4	116.1	115.6	120.3	129.3	133.4
Construction - Construction	91.9	93.5	96.3	98.5	100.0	102.5	105.2	107.7	112.3	118.4	125.3	126.3	133.0	144.5	149.0
Equipment - Matériel	106.6	92.5	97.9	104.3	100.0	100.4	96.4	97.6	95.4	99.0	95.7	91.8	91.8	95.4	98.7
Transmission lines - Total(6) - Lignes de transmission	94.4	95.7	97.0	98.9	100.0	100.9	102.3	102.7	108.5	113.0	118.7	121.9	127.5	136.5	141.9
Transformer stations - Total(6) - Postes de transformation	118.1	109.0	113.5	109.8	100.0	105.1	107.6	112.0	118.0	122.4	121.2	117.2	120.4	132.2	138.6
Structures and improvements - Installations et améliorations	105.6	101.3	102.6	103.3	100.0	102.6	108.9	112.9	124.0	131.0	127.2	123.5	131.3	137.4	139.0
Equipment - Matériel	132.6	118.4	123.2	115.7	100.0	105.9	107.3	111.9	117.4	120.4	115.1	106.7	106.1	119.4	125.2
Hydro-electric generating stations(7) - Centrales d'énergie hydro-électrique(7)					100.0	102.7	106.0	109.5	114.8	121.8	126.2	131.3	139.2	147.8	153.1

To assist comparison with other published series the indexes presented have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request. - Afin de faciliter la comparaison avec les autres séries publiées, les indices qui figurent ici ont été l'objet d'une conversion arithmétique portant l'indice à 100 en 1961 au lieu de 1956. Les indices calculés sur la base de 100 en 1956 sont fournis sur demande. The years referred to are fiscal years. For example 1956 represents the period April 1, 1956 to March 31, 1957. - Les années données ici sont des années financières. Par exemple, l'année 1956 représente la période allant du 1^{er} avril 1956 au 31 mars 1957.

Major components for the provincial indexes were presented in the November 1970 issue of Prices and Price Indexes. - Les principaux éléments des indices pour les provinces ont paru dans la livraison de novembre 1970 de Prices and Price Indexes.

Direct comparisons should not be made between this index and the highway index published by the Ont. Dept. of highways. The item content of the indexes is different. - On ne peut comparer directement cet indice avec celui de la voirie publié par le Ministère de la voirie de l'Ontario. Les éléments des deux indices sont différents.

For further detailed explanation see Prices and Price Indexes - March 1971. - Pour plus de renseignements, voir Prices and Price Indexes - mars 1971.

For further detailed explanation see occasional paper 62-526. - Pour plus de renseignements, voir le bulletin hors série N° 62-526 au catalogue.

For further detailed explanation see occasional paper 62-533. - Pour plus de renseignements, voir le bulletin hors série N° 62-533 au catalogue.

TABLE 27. Implicit Price Index for Machinery and Equipment
TABLEAU 27. Indices implicites des prix des machines et du matériel

	Implicit price indexes for business gross fixed capital formation(1) — Indices implicites de prix de la formation brute de capital fixe(1)	Construction machinery and equipment — Machines et matériel de construction	
		Arithmetically converted to — Arithmétiquement converti à	
	1961=100	1961=100	1968=100(2)
1961	100.0	100.0	78.2
1962	103.3	105.6	82.6
1963	106.1	108.4	84.8
1964	110.4	111.6	87.3
1965	114.7	114.1	89.2
1966	118.5	117.8	92.1
1967	117.7	121.1	94.7
1968	117.6	127.9	100.0
1969	120.7	133.5	104.4

Industrial Price Indexes

Indices des prix industriels

Industry Selling Price Indexes (1961=100)

Indices des prix de vente dans l'industrie (1961=100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

The data upon which both the initial selection of commodities to be priced are responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles on recueille des statistiques sur les expéditions de produits, sur l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue No. 62-528.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", n° 62-528 au catalogue.

Industry Selling Price Index: Manufacturing

Indices des prix de vente dans l'industrie: Industries manufacturières

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix des livraisons des industries manufacturières qui utilisent de la farine comme ingrédient de leurs produits, tels que le pain, les biscuits ou les gâteaux.

Purchase Price Indexes of Secondary Metals
(1969=100)

Indices du prix d'achat des métaux de deuxième fusion
(1969=100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Canadian Farm Products Price Index (1935-39=100)

Indice des prix des produits agricoles canadiens (1935-39=100)

Prices of Western wheat used in the index prior to August 1972, are buying prices of the Canadian Wheat Board for Nos. 1, 2 and 3 Northern at Thunder Bay. From August 1, 1972 forward, prices used are for Nos. 1 and 2 C.W. Red Spring 14 % at Thunder Bay. Prices for western oats and barley are also supplied by the Wheat Board. Initial payments are first used in the index calculation and are revised as further payments are announced.

Les prix du blé canadien sur lesquels étaient basés le calcul de l'indice avant le mois d'août 1972 étaient les prix payés par la Commission canadienne du blé pour le blé nos 1, 2 et 3 du Nord à Thunder Bay. À compter du 1^{er} août 1972, les prix utilisés sont ceux du blé rouge de printemps, nos 1 et 2 (14 %) à Thunder Bay. Pour calculer l'indice, on se sert d'abord des premiers paiements et on les rectifie à mesure que d'autres paiements sont annoncés.

Final payments for the crop year August 1970 - July 1971 were announced on February 11, 1972 for wheat, and on June 21, 1972 for oats. No final payment was granted for barley for the 1970-71 crop year, however, the initial payment was increased by 10¢ on February 25, 1971.

Les prix définitifs pour la campagne allant d'août 1970 à juillet 1971 ont été annoncés le 11 février 1972 en ce qui concerne le blé et le 21 juin 1972, en ce qui concerne l'avoine. Il n'y a pas eu de dernier paiement pour l'orge en 1970-1971; toutefois, le paiement initial a été majoré de 10 cents le 25 février 1971.

 (4) Used in current indexes. — Utilisé dans les indices courantes.

General Wholesale Index (1935-39=100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things

Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité, l'expression "de gros" fait penser plus au commerce de gros qu'au niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de dire exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, cet indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix des produits. En

are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: Wholesale Price Indexes 1913-50 (Reference Paper No. 24) Prices and Price Indexes 1949-52 (Vol. 23) (Catalogue No. 62-501).

Thirty Industrial Materials,
1935-39 = 100

The price index of thirty industrial materials is calculated as an unweighted geometric average of the selected commodities. The formula is as follows:

$$\frac{\sqrt[30]{P_{tN}^1 \times P_{tN}^2 \times P_{tN}^3 \times \dots \times P_{tN}^{30}}}{\sqrt[30]{P_{t\ 35-39}^1 \times P_{t\ 35-39}^2 \times P_{t\ 35-39}^3 \times \dots \times P_{t\ 35-39}^{30}}}$$

The selection of materials for pricing related to groups such as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We plan to construct an index of industrial prices that will relate to current usage of materials and that will be of the more traditional Laspeyres type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

tant que chiffre représentatif classique, on a eu tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros, consulter Wholesale Price Indexes 1913-50 (Reference Paper No. 24) et Prices and Price Indexes 1949-52 (Vol. 23) (n° 62-501 au catalogue).

Indice des prix de trente matières industrielles
(1939-39 = 100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

$$\frac{\sqrt[30]{P_{tN}^1 \times P_{tN}^2 \times P_{tN}^3 \times \dots \times P_{tN}^{30}}}{\sqrt[30]{P_{t\ 35-39}^1 \times P_{t\ 35-39}^2 \times P_{t\ 35-39}^3 \times \dots \times P_{t\ 35-39}^{30}}}$$

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

Retail Price Indexes

Consumer Price Index for Canada (1961=100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified period. The "basket" is an unchanging or equivalent quantity and quality of goods and services of which there is a continually measurable market over time, corresponding to a specific quantity of the item.

The index relates to a broad but specific group of urban families and reflects the price changes expected by that "target group". The index is unlikely to represent closely the experience of any one family in the group nor should it be expected to reflect a change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the index relates is composed of families - (a) living in cities with over 30,000 population, (b) ranging in size from two adults to two adults with four children, and (c) with annual incomes during 1957 ranging from \$2,500 to \$7,000. To measure the influence of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada goes back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In 1952, the time base was updated from 1949=100 to 1935-39=100 and, at the same time, weights were revised to reflect family expenditure patterns in 1947-48. A subsequent revision of weights based on 1957 expenditures was introduced at the beginning of 1961 and the time base was revised from 1949=100 to 1961=100 at the beginning of 1969.

Full details on the latest weighting patterns and base revisions are available in the occasional publication "The Consumer Price Index for Canada (1949=100) - Revision based on 1957 Expenditures", Statistics Canada Catalogue No. 62-518 and in the January 1969 issue of the monthly bulletin, Prices and Price Indexes, Catalogue No. 62-002.

Consumer Price Indexes for Regional Cities (1961=100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). The regional indexes are generally similar in concept and coverage to the Consumer Price Index for Canada but for their individual weighting systems.

Also, city indexes are not as comprehensive in content as the Canada consumer price index and underestimate slightly the degree of price movements during. In this connection, the shelter component of city indexes moves on the basis of changes in rents whereas changes in both rents and homeownership are included in the Canada index. As a result, homeownership costs having increased more rapidly in recent years, the housing and all-items indexes for cities tend to underestimate somewhat the rates of price increase, particularly over longer periods. Studies are under way to incorporate homeownership prices in the indexes.

Each index is designed to measure the influence of changes in retail prices taking place in the local market specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in those particular

Indices des prix de détail

Indice des prix à la consommation au Canada (1961=100)

L'indice des prix à la consommation sert à mesurer le taux de variation du prix qu'il en coûte pour acheter un "panier" de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" demeure le même; il équivaut tout au moins à une quantité égale de biens et services de qualité égale; de plus, il est constitué de produits pour lesquels on peut toujours trouver sur le marché un prix mesurable et correspondant à une quantité déterminée de ce produit.

L'indice porte sur un groupe étendu mais bien déterminé de familles urbaines et rend compte des variations des prix auxquelles l'échantillon en question a dû faire face. Il est fort peu probable que l'indice représente fidèlement l'expérience d'une famille en particulier; de même, il ne faut pas s'attendre à ce qu'il rende compte des variations des prix auxquelles ont fait face des groupes sensiblement différents par le revenu, la taille de la famille et le lieu de résidence. L'échantillon sur lequel porte l'indice est composé de familles - a) vivant dans des villes de plus de 30,000 habitants, b) dont la taille oscille entre deux adultes et deux adultes avec quatre enfants et c) dont le revenu annuel en 1957 oscillait entre \$2,500 et \$7,000. Pour évaluer l'influence des variations de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation porte sur les variations d'environ 300 articles.

L'indice des prix à la consommation au Canada remonte au début du siècle; depuis lors, on a révisé périodiquement la période de référence et les schémas de pondération. Ainsi, en 1952, la période de référence est passée de 1935-1939=100 à 1949=100; à la même occasion, les poids ont été revus de façon à présenter un reflet de la structure des dépenses des familles en 1947-48. La révision suivante des facteurs de pondération était fondée sur les dépenses des consommateurs en 1957 et fut introduite au début de 1961. Enfin, c'est au début de 1969 qu'on porta la période de 1949=100 à 1961=100.

Le lecteur trouvera de plus amples renseignements sur les dernières révisions du schéma de pondération et de la période de référence dans la publication occasionnelle "The Consumer Price Index for Canada (1949=100) - Revision based on 1957 Expenditures" (n° 62-518) et dans la livraison de janvier 1969 du bulletin mensuel "Prices and Price Indexes" (n° 62-002).

Indices des prix à la consommation dans certaines agglomérations urbaines (1961=100)

Ces indices sont publiés mensuellement dans le présent bulletin (voir Tableau 11). Par leur conception et par les éléments qui les composent, ces indices sont en général similaires à l'indice des prix à la consommation au Canada, seuls leurs coefficients de pondération diffèrent.

Aussi, les indices de prix dans les villes ne représentent pas les prix de façon aussi complète que l'indice des prix à la consommation au Canada et ils peuvent sous-estimer légèrement l'importance des mouvements de prix. C'est ainsi que l'élément "logement" des indices des villes varie en fonction des changements dans les loyers uniquement, alors que l'indice pour l'ensemble du Canada comprend les loyers et les coûts de propriété. À la suite d'une augmentation des coûts de propriété plus rapide que celle des loyers, les indices de l'habitation et de tous les éléments pour les villes ont tendu à sous-estimer quelque peu les taux de croissance des prix, surtout sur de plus longues périodes de temps. On étudie actuellement l'incorporation des prix de propriété dans les indices des villes.

Chaque indice est conçu de façon à mesurer les conséquences des variations des prix de détail survenues dans les agglomérations en question sur le prix d'un panier constant de biens et de services représentant la consommation d'un groupe représentatif de familles appartenant à ces secteurs.

In using the city indexes, it should be remembered that they are not indicators of comparative levels of prices as between the cities. That is, they do not in any way indicate whether prices are higher or lower in one city than in another.

For comparisons of retail price differentials between cities see Table 14 of this publication and the relevant explanatory note.

Historical Consumer Price Indexes (1969=100) for "Thunder Bay" and "Quebec City" are available, with explanatory notes on request from Retail Prices Section, Prices Division, Statistics Canada.

Measuring the Purchasing Power of Earnings

Changing consumer price levels affect the amounts of goods and services which a dollar will buy, and average earnings, of course, will be affected in the same way. An earnings measurement which takes the change of consumer prices into account, can be calculated by reducing actual earnings averages by the percentage amounts consumer price levels rise, or increasing them by the amount price levels fall. The adjusted averages may be used to indicate the comparative quantities of goods and services which could be purchased by average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100 in week B, and that in the same interval a consumer price index advances from 100.0 to 110.0. Because of the 10 % rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. Likewise, a 25 % rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price increase. The adjusted average is \$90.91 ($100.0/110.0 \times \$100.$), which may be referred to as a weekly wage average for week B expressed in the dollars of period A, or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express in index number form the relationship between the week A average of \$80.00 and the week B figure of \$90.91. Taking the week A average of \$80.00 as equal to 100.0, the week B index becomes 113.6 ($90.91/80.00 \times 100.0$). Such an index may be called an index of weekly real wages. It indicates that average wages for week B will buy 13.6 % more goods and services than those received in week A, in spite of a 10 % rise in consumer prices. This 13.6 % increase in real wages compares with the rise of 25 % in money wages ($100.00/80.00 \times 100.0$).

It should be noted that while the estimates of average real wages may reflect the experiences of broad groups of workers fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular income group. Group-spending patterns change over periods of time. To the extent that this occurs, the earnings data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be rendered

Le lecteur devra toujours garder en mémoire que ces indices ne sont pas des indicateurs qui permettent de comparer le niveau des prix d'une ville à l'autre et qu'ils n'indiquent en aucune façon si les prix sont plus ou moins élevés dans une ville que dans une autre.

Pour étudier les différences de prix au détail entre les villes, il faut consulter le Tableau 14 de ce bulletin et les notes explicatives qui l'accompagnent.

Les indices chronologiques des prix à la consommation (1969=100) pour Québec et Thunder Bay et les notes explicatives qui les accompagnent peuvent être obtenus de la Section des prix de détail de la Division des prix de Statistique Canada.

Calcul du pouvoir d'achat

Toute variation des prix à la consommation influe directement sur la quantité de biens et de services qu'on peut acheter avec un dollar et par conséquent sur le revenu moyen. Pour mesurer le revenu en tenant compte de la variation des prix à la consommation, on peut déduire du revenu moyen réel le montant proportionnel qui correspond à l'augmentation des prix à la consommation ou ajouter au revenu réel le montant qui équivaut à la diminution des prix à la consommation. Ces moyennes corrigées peuvent ensuite servir à déterminer la quantité de biens et de services qu'on aurait pu acheter grâce à un revenu moyen, les prix à la consommation et les habitudes de consommation n'ayant pas changé. On trouvera ci-dessous des exemples de cette méthode.

Supposons qu'une série de salaires hebdomadaires moyen passe de \$80 pendant la semaine A à \$100 au cours de la semaine B et que dans la même période de temps l'indice des prix à la consommation progresse de 100.0 à 110.0. En raison de l'augmentation de 10 % des prix à la consommation, on n'obtiendra plus autant avec \$1 au cours de la semaine B que pendant la semaine A. De même il serait exagéré de dire que, pour une augmentation de la rémunération de \$80 à \$100 le pouvoir d'achat du salaire hebdomadaire moyen s'est élevé de 25 %. On peut mener cette augmentation à des proportions plus justes en déduisant du nouveau salaire hebdomadaire moyen l'augmentation des prix à la consommation. La rémunération moyenne corrigée s'établira donc à \$90.91 ($100.0/110.0 \times \$100.$), dont on peut dire qu'elle exprime la rémunération hebdomadaire moyenne de semaine B en dollars de la semaine A, ou encore qu'elle rend compte du niveau effectif de la rémunération hebdomadaire de semaine B par rapport à la semaine A.

On peut pousser plus loin les calculs et exprimer à l'aide d'un indice la relation entre le salaire moyen de la semaine (\$80) et celui de la semaine B (\$90.91). Ainsi, si l'on considère que la rémunération moyenne de \$80 de la semaine A était égale à 100.0, l'indice de la semaine B deviendra 113.6 ($90.91/80.00 \times 100.0$). On pourrait appeler cet indice l'indice de la rémunération hebdomadaire effective; il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6 % de plus en biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10 % des prix à la consommation. L'augmentation de 25 % des salaires se ramène donc à une augmentation effective de 13.6 % ($100.0/80.00 \times 100.0$).

Il convient de souligner que, même si les estimations de la rémunération moyenne effective résument assez bien la situation d'un large éventail de travailleurs, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur le revenu porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur le revenu réajustées par l'indice des prix à la consommation (les habitudes de consommation étant "fixes") perdront graduellement de leur

is valid. Finally, some part of income may be saved, it should be borne in mind that it is not appropriate to reduce savings to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of real earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of money over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both retail and real wages uses 1961 as a reference year. However, the adjustment made in the foregoing illustration can be applied to any reference level; percentage change between any two periods will be the same regardless of the reference period selected.

Inter-City Retail Price Comparisons

Statistics relating to differences in retail prices between Canadian cities were initially developed for food, and subsequently extended to cover such other items of the family budget as clothing, transportation, household operation, health and personal care, recreation and reading, and tobacco and alcohol. In inter-city price comparisons are drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based with the major omission being shelter (rented and owned.) While recognizing the importance of shelter differentials in any overall comparison of the general price level being encountered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require further research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons on other elements of the budget will go some distance towards serving the varied needs of users.

Table 14 presents the results of an updating of retail spatial retail price measurements to May 1971. It includes more complete data on several cities. A further explanation of the study from which this table was derived is contained in the November 1968, November 1969 and April 1972 issues of *Prices and Price Indexes* (Statistics Canada, Catalogue Number 62-002).

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes. In developing these spatial price comparisons, attempts were made to achieve comparability by equating types of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices (indexing 100 to facilitate comparisons over the whole range of cities. Except for foodstuffs and new passenger cars for which inter-city price differentials were

valeur. Enfin, il ne faut pas oublier qu'une partie du revenu peut être consacrée à l'épargne et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations du revenu effectif calculées à partir de moyennes du revenu brut peut différer de l'évaluation des variations du pouvoir d'achat du revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de la rémunération effective ne sert pas à mesurer les variations des niveaux de consommation des salariés et de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente la rémunération tant réelle qu'effective prend pour base l'année 1961. Toutefois, les ajustements illustrés dans les exemples ci-dessus peuvent s'appliquer à tout niveau de référence; la variation proportionnelle entre deux périodes sera en effet identique quelle que soit la période de référence choisie.

Comparaisons entre les prix de détail d'une ville à l'autre

À l'origine, la statistique des différences entre les prix de détail d'une ville du Canada à l'autre a été mise au point pour l'alimentation; par la suite, on l'a étendue à d'autres postes du budget familial tels que l'habillement, les transports, l'entretien du ménage, la santé et les soins personnels, les loisirs et la lecture, et le tabac et l'alcool. Au total, les comparaisons d'une ville à l'autre portent sur des biens et des services constituant près des trois quarts du budget servant actuellement à construire l'indice des prix à la consommation au Canada, la seule grande omission étant le logement (location et frais de possession). Sans vouloir nier l'importance des différences en ce qui concerne le logement dans toute comparaison globale du niveau général des prix aux quels les consommateurs doivent faire face dans divers centres urbains, il faut bien dire que les problèmes que comporteraient l'établissement d'une comparaison valable d'une ville à l'autre sont tels qu'ils nécessitent plus de recherche. Entre-temps, on estime que malgré l'absence actuelle de données sur les dépenses de logement, la publication de comparaisons des prix de détail pour d'autres postes du budget permettra de faire de gros progrès en ce qui concerne la satisfaction des besoins variés des utilisateurs.

On trouvera au Tableau 14 le résultat d'une mise à jour de mesures de prix de détail tirées précédemment jusqu'à mai 1971, ainsi que des données plus complètes sur plusieurs villes. Une explication plus détaillée de l'étude dont le tableau en question est tiré figure dans les livraisons de novembre 1968, novembre 1969, et avril 1972 de *Prices and Price Indexes* (n° 62-002 au catalogue).

Les premières données de base pour la présente étude ont été constituées par l'importante collection de prix de détail recueillie lors de la confection des indices nationaux et urbains des prix à la consommation. Au moment d'établir ces comparaisons géographiques de prix, on s'est efforcé d'assurer la comparabilité en prenant des biens et des services de qualité égale et en assortissant autant que possible les points de vente au détail par type. Les relations de prix entre paires de villes ont été calculées puis converties à la base commune des prix de Winnipeg = 100 afin de faciliter des comparaisons pour l'ensemble de toutes les villes. Sauf pour les denrées alimentaires et les voitures neuves, pour lesquelles les dif-

derived directly from new comparisons based on May 1971 price data, the updating of these measurements of inter-city retail price differentials was accomplished by application of the relative movement of prices, at the item level in each city, over the intervening periods as derived from the relevant city consumer price indexes. These price relationships at the item level were aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns exist among cities, the magnitude of these differences in the cities covered is not such as to affect most of the spatial comparisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-urban retail price differentials, aggregative indexes beyond major budget groupings are not shown.

It should be noted that the retail prices used in this comparisons, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of non-food commodities can be of significance in explaining inter-city price differentials for these items.

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.

Farm Input Price Indexes (1961=100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. These data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961=100 time base.

Farm Input Price Indexes replace one of the two major component indexes of the previously published series, Price Index Numbers of Commodities and Services Used by Farmers, 1935-39=100. The latter index was composed of a Farm Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replaces the Composite Index Exclusive of Living Component from 1961 forward.

A detailed description of concepts, methods and data sources is contained in the occasional paper, Farm Input Price Indexes, 1961=100, Catalogue No. 62-534, and is reproduced in the September 1971 issue of Prices and Price Indexes, Catalogue No. 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, Farm Input Price Indexes, 1961=100, Catalogue No. 62-004, and in the monthly publication Prices and Price Indexes, Catalogue No. 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterpart, and publication has been suspended.

férences de prix entre villes ont été tirées directement de nouvelles comparaisons fondées sur les données de mai 1971, la mise à jour de ces mesures des différences de prix de détail entre les villes a été assurée grâce l'extension des mouvements relatifs de prix au niveau de chaque article dans chaque ville aux périodes observées selon le calcul établi à partir de l'indice des prix à la consommation pour la ville en question. Ces relations entre les prix au niveau de l'article ont été agrégées sur la base des habitudes de consommation du citoyen pour l'ensemble du Canada et non pas sur les habitudes de dépense applicables à des villes individuelles. Même s'il existe des différences dans les habitudes de dépense d'une ville à l'autre, l'importance de ces différences en ce qui concerne les villes dont il est question ici ne sont pas suffisantes pour influencer sensiblement sur la plupart des comparaisons géographiques. Du fait de l'absence des relations de prix en ce qui concerne le logement, dont a déjà été question ci-dessus et qui pourrait avoir une importance considérable chaque fois que l'on voudrait tirer une comparaison globale entre les différences de prix à la consommation au détail d'une ville à l'autre, on ne trouvera ici aucun indice synthétique agrégé au-delà des principales composantes du budget.

Il faut remarquer que les prix de détail ayant servi la présente comparaison sont ceux que doit payer le consommateur et comprennent donc les taxes de vente et les taxes d'accises qui peuvent s'appliquer. Les différences d'une province à l'autre entre les barèmes de taxe de vente imposés sur une grande variété de biens non alimentaires peut avoir une grande importance pour expliquer les différences de prix d'une ville à l'autre pour les articles en question.

Le fait que ces indices aient été exprimés en prenant Winnipeg = 100 ne signifie pas que le choix de Winnipeg comme ville de référence ait une signification particulière et les indices pourraient être exprimés sur la base de n'importe quelle des villes qui y figurent.

Indices de prix des entrées dans l'agriculture (1961=100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui y sont compris, ainsi que leurs poids, sont fixés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961=100.

Les indices des prix des entrées dans l'agriculture placent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39=100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

Le bulletin hors série Farm Input Price Indexes, 1961=100 (n° 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données. C'est reprise dans Prices and Price Indexes de septembre 1971 (n° 62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest du Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel Farm Input Price Indexes, 1961=100 (n° 62-004) et dans le bulletin annuel Prices and Price Indexes (n° 62-002).

On n'a pas remplacé l'indice du coût de la vie pour la famille agricole des séries de 1935-39 par un équivalent. On a cessé de le publier.

Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto, Montreal and Canadian stock exchanges. The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the common and mining stock indexes are Thursday's closing quotations as reported in the Globe and Mail and the Montreal Gazette. For preferred stocks, prices are monthly weighted averages of the daily closing prices in which weights are daily total sales. The price reference base for the indexes is the year 1956 which has been adopted as an interim base for recently developed Statistics Canada indexes. The indexes express prices as a percentage of prices in 1956 and arithmetically converted to the 1961=100 base.

Revised indexes on the base 1956=100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the index, apart from the shift in the price reference base, is the classification of stocks according to the Standard Industrial Classification. In the continuing major group Industrials 4 sub-groups (Milling and Grains, Food and Allied Products, Machinery and Equipment, and Mining Materials) have been replaced by 8 new sub-groups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-Metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of the former index, viz., Industrial Mines, Lumber, Textile and Clothing, Pulp and Paper, and Petroleum (renamed Petroleum) have been continued. The major group Utilities is continued but the Pipelines index has been added as a sub-group and the previous Power and Traction sub-group has been replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A new major group Finance is composed of the former major group Banks and the former supplementary index Investment and Loan. Constant weights, which were previously limited to major groups, have been extended to sub-groups. Weights in the index continue to be based on shares outstanding.

For the list of stocks currently included in the Investors Index and Preferred Index, see Prices and Price Indexes for February 1972.

Residential and Non-Residential Building Construction Price Indexes

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of users (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of Prices and Price Indexes, and this explanation is available on request from the Prices Division, as is historical monthly data for the series.

Because the indexes measure the impact of price change on the materials and labour inputs to construction, and not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as indicators of price change for the input of building construction, or buildings in place. Users are therefore warned to exercise caution in making use of the series, for this purpose. A comparison of these series with the implicit price deflators (1) providing an estimate of price change for the output of the industry, derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of adjusting the fixed-weighted input indexes for changes in productivity and profit margins.

National Income and Expenditure Division, Statistics Canada.

Indices des cours des valeurs mobilières

Les indices des cours des valeurs mobilières donnent une mesure dans le temps de l'effet du mouvement des prix sur la valeur d'un portefeuille de titres achetés et détenus par un placeur hypothétique (et non pas un spéculateur). Le portefeuille représente des titres des sociétés canadiennes cotées à la Bourse de Toronto, de Montréal et à la Bourse canadienne. Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation. Les indices des prix des titres ordinaires et des titres miniers sont les cours de fermeture de la Bourse du jeudi indiqués dans le Globe and Mail et dans la Montreal Gazette. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles du total des ventes quotidiennes. La base de pondération entre les sous-groupes est l'année 1956. Toutes les séries ont été recalculées sur la base de 1961=100. Les indices sont pondérés d'après le nombre d'actions en circulation.

Les indices révisés sur la base 1956=100 ont été publiés pour la première fois dans la livraison de juin 1962 de ce bulletin. La plus importante modification à la révision de l'indice, à part le changement de la période de référence, a été le classement des actions d'après la Classification des activités économiques. Dans le cas du grand groupe des valeurs industrielles, 4 sous-groupes (minoterie et céréales, aliments et produits connexes, machines et matériel et matériaux de construction) ont été remplacés par 8 nouveaux sous-groupes (aliments, imprimerie et édition, métaux primaires, produits métalliques, minéraux non métalliques, produits chimiques, construction et commerce de détail). On a conservé les 5 autres sous-groupes de l'ancien indice: mines industrielles, boissons, textiles et habillement, pâtes et papiers, et huiles (sous la désignation de pétrole). Le grand-groupe des services d'utilité publique a été conservé mais l'indice des pipe-lines a été ajouté comme sous-groupe et l'ancien sous-groupe d'énergie et traction a été remplacé par deux nouveaux sous-groupes: l'énergie électrique et la distribution du gaz. Le nouveau grand groupe "Finances" est composé de l'ancien grand groupe banques et de l'ancien indice supplémentaire investissements et prêts. Les facteurs constants de pondération qui étaient autrefois limités aux grands groupes s'appliquent maintenant aux sous-groupes. Les facteurs de pondération de l'indice continuent à être basés sur les actions en circulation.

La liste des titres repris actuellement dans les indices des valeurs de placements et dans les indices des valeurs privilégiées se trouve dans Prix et indices des prix de février 1972.

Indices des prix de la construction résidentielle et non résidentielle

Les indices à pondération fixe des prix des entrées de matériaux et de salaires dans la construction résidentielle et non résidentielle sont publiés ici pour faciliter la tâche aux utilisateurs (Tableau 20). On trouvera une description plus détaillée des caractéristiques des indices dans Prices and Price Indexes de mai 1970. On peut s'en procurer un exemplaire ainsi que les données mensuelles chronologiques sur cette série en s'adressant à la Division des prix.

Comme les indices mesurent l'influence des variations de prix sur les entrées de matériaux et de main-d'oeuvre du bâtiment plutôt que les répercussions des variations de marges bénéficiaires ou de productivité, on les croit surestimés en tant qu'indicateurs des variations de prix de la construction, ou des bâtiments construits. Les utilisateurs devront donc faire preuve de discernement quand ils se serviront des séries à cette fin. Si l'on compare ces séries avec les facteurs de dégonflement (1) des prix implicites (qui donnent une estimation de la variation du prix pour la production de l'industrie), obtenus en mesurant la formation brute de capital fixe en dollars constants, on aura un aperçu des effets de l'ajustement sur l'évolution des prix des indices à pondération fixe des entrées pour tenir compte des variations de productivité et de marges bénéficiaires.

(1) Division du revenu national et de la défense nationale, Statistique Canada.

During the period from 1926-1966 a special sample of respondents supplied materials prices for the index. As of 1961 this sample has been replaced with prices from the ISPI system(2). The latter are published monthly in Table 2 of this publication.

The Construction wage rate series is based on wage rate material supplied by the Labour Standards Branch, Dept. of Labour, and relates to minimum wages paid on government contracts for construction in a variety of trades and cities.

Users are reminded that the indexes were arithmetically rebased to the year 1961=100 and therefore combining the components with the weights as shown will not provide the composite index provided. Users able to provide their own weights for the components can recombine the components to suit their particular needs.

Basic Union Wage Rate Indexes for Major Construction Trades

Basic union wage rate indexes are prepared for 12 major construction trades in each of 14 cities in Canada. Weighted average city indexes are prepared as well as a 14 city composite. Indexes are released quarterly in summary form in Tables 21 and 22 of Prices and Price Indexes (62-002). This index is found in Table 20 of Prices and Price Indexes (62-002). Full trade detail, by city, is published quarterly in the Construction Price Statistics Service Bulletin, (62-006).

Rates utilized in index calculations are derived mainly from the Construction Collective Agreement Survey Service provided by the Canadian Construction Association. These rates are supplemented as necessary by surveys of some union locals. While indexes containing supplementary benefits will be available soon, presently published indexes relate to basic union wage rates only. The rates indicate the rate of straight time compensation for one hour in the city specified. Rates converted into the form of ratios were combined into weighted average city indexes utilizing 1961 Census of Population data on numbers of people employed by trade and average earnings in the construction industry.

The base-weighted indexes provide an estimate of the impact of rate change on basic union wages for the major construction trades employed in a given city. Because union workers in cities tend to be engaged mainly in non-residential or commercial building construction and because rates for trades associated with engineering work were excluded from the price sample the indexes best approximate wage rate change for non-residential construction.

Highway Construction Price Indexes (1961=100)(3)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the previously published indexes to a 1956=100 time base. Users are warned that an

(2) Industry Selling Price Indexes 1956-1968 Cat. 62-528.

(3) The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

Au cours de la période 1926-1966, un échantillon spécial d'enquêtés a donné les prix pour l'indice. En 1961, on a remplacé cet échantillon par les prix tirés du système I.P.V.I.(2) Ces prix sont publiés par mois dans le Tableau 2 du présent bulletin.

La série consacrée au taux de rémunération dans l'industrie du bâtiment est basée sur les chiffres fournis par la Direction des normes du travail du ministère du Travail; elle a trait au salaire minimum versé aux termes de marchés signés avec le gouvernement pour des travaux de construction dans divers corps de métiers et dans diverses villes.

Nous rappelons aux utilisateurs que les indices ont été recalculés sur la base 1961=100 et qu'ils n'obtiendront pas l'indice synthétique fourni en combinant les éléments et les pondérations donnés. Les utilisateurs qui sont à même de fournir leur propre pondération pour les éléments peuvent procéder à leur propre combinaison adaptée à leurs besoins spécifiques.

Indices du salaire syndical de base dans les principaux corps de métiers

Les indices du salaire syndical de base portent sur les 12 principaux métiers de la construction dans 14 grandes villes canadiennes. On calcule les indices pondérés moyens pour chaque ville de même que l'indice synthétique des 14 villes. Les indices sont publiés chaque trimestre dans les Tableaux 21 et 22 de la publication Prix et indices des prix (numéro de catalogue 62-002). (...) On peut trouver cet indice dans le tableau 00 de la publication Prix et indices des prix (no 62-002). Des données détaillées sur tous les métiers de la construction dans chaque ville sont publiés chaque trimestre dans le bulletin de service Statistique des prix dans la construction (numéro de catalogue 62-006).

Les taux utilisés dans le calcul des indices proviennent principalement de la publication Construction Collective Agreement Survey Service de l'Association canadienne de la construction. Des enquêtes auprès de certaines succursales de syndicats ont été menées lorsqu'il fallait disposer de taux supplémentaires. On publiera sous peu des indices contenant les avantages supplémentaires, mais les indices actuels portent uniquement sur le salaire syndical de base. Les taux correspondent à la rémunération normale pour une heure dans la ville en question. Les taux convertis en ratios ont été transformés en indices pondérés moyens des villes à partir des données tirées du recensement de la population de 1961 sur les effectifs de chaque métier et les gains moyens dans l'industrie de la construction.

Les indices pondérés permettent d'évaluer l'influence de la variation du taux des salaires syndicaux pour les principaux métiers de la construction dans une ville donnée. Étant donné que les travailleurs syndiqués dans les villes s'occupent surtout de la construction non résidentielle, ou commerciale et que les taux des métiers relevant du génie civil n'ont pas été inclus dans l'échantillon des prix, les indices constituent la meilleure approximation des variations dans les taux de salaire dans la construction non résidentielle.

Indices des prix de la construction routière (1961=100)(3)

Les indices des prix de la construction routière au Canada représentent les prix payés chaque année par les administrations provinciales au titre des marchés de construction routière, en pourcentages des sommes payées en 1961. La conversion des indices à la base 1961=100 ne modifie pas leur évolution en pourcentages comparativement aux indices publiés précédemment et dont la base était 1956=100. Les utilisateurs ne doivent pas s'attendre à ce que le groupement des indices

(2) Indices des prix de vente dans l'industrie, 1956-1968, n° 62-528 au catalogue.

(3) Il s'agit d'exercices financiers. 1968 représente donc la période du 1er avril 1968 au 31 mars 1969.

gregation of the converted major group indexes with the published weights will not yield the published 1961=100 all items indexes. The conversion does not solve this problem for a user wishing to reweight the converted major group indexes using weights appropriate to his own purpose.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by specified provincial governments during the eight-base period. Weights of items in the index, presenting the relative importance of units of construction in the year 1956 are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problem of estimating price change for highway construction see pages vi & vii of the December 1967 issue of Prices and Price Indexes, Catalogue 62-002 and pages 9 & 10 of the reference paper Price Indexes of Highway Construction in Catalogue 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or updating previously costed roadwork, in estimating replacement cost of previously completed roadwork, and in historical measurements of price trends in highway construction.

The indexes do not necessarily reflect the price movements of non-contract construction or maintenance work. The indexes are designed to measure price changes for a fixed programme of highway construction, each of the seven provinces. Because price levels in the time base-period (1961) varied from province to province the indexes cannot be used to compare price differences between provinces, but only to compare differences in the rate at which prices are changing in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction price indexes but rather for units of construction work put in place such as an acre of clearing, a cubic yard of earth excavation or a ton of continuous hot-mix paving. In addition, the index contains prices of some materials, such as culvert pipe, usually supplied to the contractor by the highway departments. Prices of highway construction work are equal weighted averages of bid prices of units of construction in groups of contracts awarded, classified by price-determining characteristics of the contracts and the bid items such as volume of the bid item, type of contract and geographic location. Prices of materials of supply are prices paid by government departments to suppliers.

Price Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and equipping electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction technology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

convertis des grands groupes et des pondérations publiées donne l'indice général publié (1961=100). Cette conversion ne pose aucun problème à l'utilisateur qui désire réviser la pondération des indices convertis des grands groupes en utilisant les poids adaptés à ses fins propres.

Les indices pondérés en fonction de la base sont publiés chaque année; ils mesurent, pour la période allant de 1956 à 1968, l'influence de l'évolution des prix sur le coût des programmes spécifiques de construction de routes au Canada représentés par les marchés de construction de routes d'environ \$50,000 ou plus accordés par certaines administrations provinciales au cours de la période visée par la base de pondération. Les poids des éléments des indices qui représentent l'importance relative des unités de construction en 1956 sont constants. Seules les estimations de prix varient d'une année à l'autre; les indices mesurent donc l'évolution des prix dans le temps. Pour plus de détails sur l'estimation de l'évolution des prix pour la construction routière, se reporter aux pages vi et vii du numéro de décembre de Prices and Price Indexes (n° 62-002 au catalogue de Statistique Canada) et aux pages 9 et 10 du bulletin intitulé Price Indexes of Highway Construction in Canada (n° 62-520 au catalogue de Statistique Canada). L'indice général ou ses éléments servent à la planification et à la budgétisation des programmes de construction routière, à indexer ou à mettre à jour les prix de travaux de routes effectués précédemment, à estimer le coût de remplacement des travaux routiers achevés précédemment et à mesurer chronologiquement l'évolution des prix de la construction routière.

Les indices ne reflètent pas nécessairement l'évolution des prix de la construction effectués hors marché ou des travaux d'entretien; ils servent à mesurer les variations de prix pour un programme déterminé de construction routière dans chacune des sept provinces. Au cours de la période qui a servi de base (1961), les niveaux de prix ont varié d'une province à l'autre; aussi, on ne peut utiliser les indices pour comparer des différences de prix entre les provinces mais on peut seulement les employer pour comparer les différences entre taux de variation des prix dans les provinces.

Les prix compris dans l'indice ne se rapportent pas aux unités de travail ni de matériaux comme c'est habituellement le cas dans l'indice des prix de la construction; ils se rapportent plutôt aux unités de travail de construction effectué, comme le défrichement d'une acre de terrain, l'excavation d'une verge cube ou l'épandage à chaud d'une tonne de béton bitumineux. En outre, l'indice comprend le prix de certains matériaux, par exemple, les tuyaux de ponceau fournis habituellement à l'entrepreneur par les ministères de la Voirie. Les prix des travaux de construction routière sont des moyennes pondérées des prix de soumission pour les unités de construction par groupe de marchés classés selon les caractéristiques des marchés qui déterminent le prix et les éléments d'offre tels que le volume de chaque poste, le type de marché et la situation géographique. Les prix des matériaux fournis sont les prix payés par les ministères aux fournisseurs.

Indices des prix à la construction dans les services d'électricité

En ce qui concerne les services d'électricité, l'indice a pour but de fournir une estimation des conséquences des variations de prix sur le coût des matériaux, de la main-d'œuvre et du matériel utilisés dans la construction et l'équipement des services d'électricité au cours d'une période de référence donnée. L'indice sert à mesurer combien il faudrait payer en plus ou en moins pour réaliser un programme de construction identique à celui de la période de référence en utilisant les mêmes techniques de construction et en supposant que les taux de rentabilité et de productivité de la construction soient les mêmes pour les deux périodes.

As the market does not yield comparable selling prices for such unique transactions as, for example, the sale of a transmission line, it was not possible to produce an index of the prices of completed structures. Completed structure indexes would be appropriate for users wishing either to estimate reproduction costs or to deflate capital formation. For such uses the indexes introduced in this publication have specific shortcomings. Nonetheless, they may be helpful for such purposes provided the users understand the deficiencies. Thus the reader is asked to make particular note of Section III, of Occasional Paper Catalogue 62-526 Price Indexes of Electrical Utility Construction - The Necessity for Compromise and Section XI, (of the same paper) Uses and Limitations. In addition, because particular construction projects are unique, the aggregate indexes will not likely be appropriate to specific projects since they relate to an average mix of materials, labour and equipment derived from a variety of projects in a specific base period. Thus, if the component price indexes and their weights included in the aggregate index presented herein are inappropriate for a particular purpose the user should consider selecting appropriate component indexes from among those published herein. These indexes could then be combined into an aggregate index by utilizing weights derived from the projects or assets to be costed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials or equipment. The price reported is for units and terms of sale representative of the volume sales of the manufacturer. Where sales to electric utilities form a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and others directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial tax changes. Until December 1964 wage rate data were supplied by the Federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union basic wage rates reported by major utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban own account and contract electric utility construction. Some further improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Construction has been defined as new construction or major reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by major utilities, relating to own account and to contract construction erected during the last half of the 1950's. Weights were derived from these data which indicated the relative importance of the major inputs to the construction. The components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and expenditures for labour, e.g. - line-men and groundmen. Costs relating to construction equipment such as trucks, and components of equipment operating costs such as tires, gasoline and repairs were also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land and rights-of-way have been excluded.

Comme il est impossible d'obtenir directement sur le marché des prix de vente comparables pour des opérations de caractère aussi unique, par exemple, que la vente d'une ligne de transport d'énergie, Statistique Canada n'a pu établir un indice du prix des installations en place. Un tel indice ne serait utile que si l'on désirait obtenir une estimation des sommes qu'il faudrait engager pour réaliser à nouveau un programme de construction identique ou encore pour dégonfler une formation de capital. Les indices publiés ici présentent en ce sens certaines lacunes. Ils peuvent néanmoins servir à de telles fins pourvu que les utilisateurs en comprennent les limites. Les lecteurs peuvent se rapporter aux Sections III et XI de la publication Price Indexes of Electrical Utility Construction (Statistique Canada, 62-526): "The Necessity for Compromise" et "Uses and Limitations". De plus, en raison du caractère unique de chaque projet de construction, l'indice synthétique ne pourra sans doute pas s'appliquer à un projet bien précis car il porte justement sur une moyenne des matériaux, de la main-d'oeuvre et du matériel utilisés dans la réalisation de plusieurs projets au cours d'une période de référence donnée. Ainsi, si les indices détaillés et les poids correspondants qui composent les indices synthétiques présentés ici ne conviennent pas à un usage bien précis, l'utilisateur pourra toujours se servir des autres indices détaillés et construire, à l'aide des coefficients de pondération, les indices de son choix, soit pour évaluer le coût d'un projet, soit pour établir des facteurs de dégonflement.

La plupart des prix des matériaux et du matériel utilisés pour établir les indices sont les prix de vente déclarés mensuellement par les fabricants. Ces prix sont représentatifs des unités de mesure et des conditions de vente valables pour les ventes en grande quantité des fabricants. Lorsque les ventes aux services électriques ne représentent qu'un faible pourcentage du chiffre d'affaire d'un fabricant, il est possible que le prix déclaré ne représente pas de façon satisfaisante le prix consenti aux entreprises en construction et aux autres industries s'occupant directement de construction et d'installation de services d'électricité. Dans ces cas, on a inclus dans l'indice les prix facturés aux autres fabricants ou grossistes. On a tenu compte, dans l'établissement de l'indice, des variations de la taxe de vente fédérale; toutefois, il n'a été fait aucun redressement pour les variations de taxe provinciale. Jusqu'en décembre 1964, les données sur les taux de rémunération étaient fournies par le ministère fédéral du Travail et représentaient le salaire horaire minimum versé aux personnes travaillant au titre d'un marché accordé par le gouvernement fédéral dans certaines grandes villes. En 1965, on fit entrer dans l'indice le salaire de base exigé par les syndicats et déclaré par les principaux services et par certains entrepreneurs. L'échantillon choisi représente donc une estimation des variations du taux de rémunération dans la construction en ville de services électriques pour compte propre ou au titre d'un marché. Certaines améliorations à l'indice sont prévues de façon à l'étendre aux personnes non syndiquées travaillant dans les régions rurales à la construction de lignes de transport d'énergie.

Le terme "construction" a été défini comme étant la construction neuve ou la réparation de réseaux de distribution, lignes de transport d'énergie, de postes de transformation ou de postes de manœuvre. L'entretien et les frais d'exploitation ne sont pas compris. Les données sur les prix de revient sont fournies par les principaux services d'électricité et portent sur la construction exécutée pour compte propre ou au titre d'un marché au cours de la deuxième moitié des années cinquante. Les poids tirés de ces données représentent l'importance relative des principaux éléments entrant dans la construction. Les composantes du coût de la distribution et du transport comprennent certains éléments comme les poteaux, la quincaillerie, les conducteurs, les isolateurs, les compteurs, les transformateurs de distribution et les dépenses en main-d'oeuvre (monteurs, personnel de service, etc.). Les dépenses entraînées par le matériel de construction (camions et pièces d'équipement) et les frais d'exploitation (pneus, essence et réparations) sont également inclus. Les postes de transformation et les postes de manœuvre comprennent certains des éléments ci-dessus; les frais les plus importants sont cependant entraînés par les transformateurs et les appareils de connexion. Les dépenses foncières et les droits de passage ont été exclus.

The term Canadian electric utility has been defined to include municipal as well as nonmunicipal utilities but the majority of the cost data tabulated has derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

Price Indexes of Hydro-electric Generating Stations

The following additional points may be of assistance to users of the hydro-electric generating stations index which was described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

- (a) Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.
- (b) Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.
- (c) Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.
- (d) Weighting patterns exclude expenditure for ancillary facilities for logging and navigation, permanent houses, etc.

Price Indexes of Machinery & Equipment

In response to the need of users wishing either correct expenditure data of machinery and equipment price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968=100. Most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

Conceptually purchasers' prices should be utilized in such indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for exchange and federal sales tax.

Foreign prices utilized in the index are either from the Bureau of Labour Statistics commodity indexes or from Division collections from manufacturers most of whom reside in the United States.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim

Par définition, l'expression "service d'électricité canadien" englobe aussi bien les services municipaux que les autres; toutefois, la majeure partie des données de coût ont été tirées des déclarations des services non municipaux. Les fabricants qui produisent de l'électricité destinée à l'auto-consommation et qui peuvent également vendre de l'électricité ont été exclus de cette enquête.

Indices de prix des centrales hydroélectriques

Les points supplémentaires ci-après peuvent aider les utilisateurs de l'indice des centrales hydroélectriques décrit en détail dans le bulletin hors-série de Statistique Canada portant le numéro 62-533.

- (a) Les données sur le taux de rémunération proviennent de diverses sources et surtout des enquêtes sur les accords syndicaux de l'Association canadienne de la construction et des études du Bureau de recherche sur les traitements portant sur la rémunération des travailleurs intellectuels, des techniciens et du personnel administratif. Pour le calcul de l'indice, on a utilisé les taux de rémunération de base, avantages sociaux non compris.
- (b) Au lieu du prix des entrées de main-d'oeuvre, de matériaux et de location de matériel pour la production de béton et des remblais effectués, on a utilisé le prix du béton préparé et celui de la terre et du gravier en place.
- (c) L'indice comprend les prix correspondant à certains postes de dépenses qui n'étaient pas repris auparavant dans les indices de prix des entrées dans la construction: intérêts pendant la construction, frais généraux, fourniture et entretien de baraquements temporaires.
- (d) Les facteurs de pondération ne comprennent pas les dépenses affectées aux installations auxiliaires pour l'exploitation forestière et la navigation, les maisons permanentes, etc.

Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968=100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente des fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du U.S. Bureau of Labour Statistics ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre, à mesure qu'ils seront disponibles. En

preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de prix des marchandises, compte tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.

Industry Selling Price Index: Manufacturing (1961=100)

The industry selling price index (Total Manufacturing) moved 0.5 % higher in November to 129.6 from the October index of 129.0. It was 5.6 % higher than the November 1971 index of 122.7. Of the 101 industry indexes included in the Total, 43 were higher, 9 declined and 49 were unchanged.

In terms of the relative contribution to the overall change in the total manufacturing index, the more notable changes were continuing advances registered for the wood products group, particularly in the sawmills and planing mills industry. The foods and beverages group moved higher reflecting price increases in the feed mills, vegetable oil mills, fish products, and slaughtering and meat packing industries. The leather products group, which has been rising steadily since mid 1971, rose again in November on higher prices recorded in the leather tanneries, and shoe factories industries. Declines during the month were relatively insignificant.

Indice des prix de vente dans l'industrie: Industries manufacturières (1961=100)

L'indice des prix de vente dans l'industrie pour l'ensemble des industries manufacturières a augmenté de 0.5 % en novembre, passant de 129.0 en octobre à 129.6. Il était de 5.6 % supérieur à l'indice de novembre 1971 (122.7). Sur les 101 industries comprises dans le total, les indices ont augmenté dans 43 industries, ont baissé dans 9 et sont restés inchangés dans 49.

Pour ce qui est de l'importance relative de chaque industrie au sein des industries manufacturières, les changements les plus appréciables ont été les progressions continues observées dans le groupe des produits du bois, particulièrement dans l'industrie des scieries et des ateliers de rabotage. Le groupe des aliments et boissons a progressé à la suite d'une hausse des prix chez les fabricants d'aliments pour animaux, les fabricants d'huile végétale, des prix des produits de la pêche, ainsi que dans le groupe de l'abattage et du conditionnement de la viande. Le groupe des produits en cuir, qui augmentait de façon continue depuis le milieu de 1971, a continué d'augmenter en novembre, suite à la hausse des prix dans les tanneries et les fabriques de chaussures. Les diminutions constatées au cours du mois ont été relativement peu importantes.

October to November Changes in Industry Indexes

Variations d'octobre à novembre des indices dans l'industrie

	Nov/Oct			Major group indexes — Indices des groupes principaux								
	Number of industries — Nombre d'industries			Nov. 1972	Oct. 1972	Nov. 1971

General Wholesale Index (1935-39=100)

The general wholesale index moved up 1.2 % in November to 322.4 from the revised October index of 318.7. It was 9.8 % higher than the November 1971 index of 293.7. Six of the eight major group indexes were higher, while two declined.

The vegetable products group index rose 3.1 % in November to 267.0 from the revised October index of 258.9 on higher prices for certain primary and industrial materials. An advance of 1.5 % to 385.8 from 380.2 in the animal products group index reflected price increases for livestock, fishery products and fresh meats. Higher prices for hardware and pig iron resulted in an increase of 1.3 % in the iron products group index to 331.6 from 327.4. The wood products group index moved up 1.0 % to 460.7 from 456.1 on price increases for fir, cedar and hemlock. More moderate advances were recorded in the chemical products group index to 246.7 from 245.2 and the non-metallic mineral products group index to 235.0 from 234.6.

The non-ferrous metal products group index moved 0.8 % lower to 268.9 from 271.1 on price decreases for electrolytic lead and tin. A decline of 0.7 % to 281.9 from 283.8 in the textile products group index reflected lower prices for raw cotton, and domestic and imported raw wool.

The following table lists the Total Index and component groupings for specified dates:

Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros a progressé de 1.2 %, passant de 318.7 en octobre (indice rectifié) à 322.4 en novembre, ce qui représente une hausse de 9.8 % par rapport à l'indice de novembre 1971 (293.7). Six des huit indices des groupes principaux ont augmenté, deux ont baissé.

L'indice des produits d'origine végétale a augmenté de 3.1 % en novembre, passant de 258.9 (indice rectifié) en octobre à 267.0, à la suite d'un accroissement des prix de certaines matières brutes et produits industriels. La hausse de 1.5 % de l'indice des prix des produits d'origine animale, qui est passé de 380.2 à 385.8, est imputable à une augmentation des prix du bétail, des produits de la pêche et des viandes fraîches. La montée des prix des produits de quincaillerie et de la fonte s'est traduite par une augmentation de 1.3 % de l'indice du groupe des produits du fer, qui passe de 327.4 à 331.6. L'indice du groupe des produits du bois a progressé de 1.0 %, passant de 456.1 à 460.7, à la suite d'une hausse des prix du sapin, du thuya (cèdre) et de la pruche. On a constaté des avances moins marquées dans le cas de l'indice du groupe des produits chimiques, qui est passée de 245.2 à 246.7, et du groupe des produits minéraux non métalliques, qui est passé de 234.6 à 235.0.

L'indice du groupe des produits métalliques non ferreux a baissé de 0.8 % passant de 271.1 à 268.9, à la suite d'une diminution des prix du plomb électrolytique et de l'étain. Une baisse de 0.7 % de l'indice du groupe des produits textile, qui passe de 283.8 à 281.9, est imputable à une diminution des prix du coton brut, ainsi que de la laine brute canadienne et importée.

Le tableau ci-dessous présente les variations les plus importantes:

	Nov. 1972	Oct. 1972	Nov. 1971	Oct. 1971	% Change — Changement proportionnel %	
					Nov. /72	Nov. /72
					Oct. /72	Nov. /71
General Wholesale Index — Indice général de gros	322.4	318.7 ^r	293.7	291.3	+ 1.2	+ 9.8
Vegetable products — Produits d'origine végétale	267.0	258.9 ^r	232.9	231.6	+ 3.1	+ 14.6

Fully and chiefly manufactured goods — Produits finis ou presque finis	341.8	339.5 ^r	316.4	313.5	+ 0.7	+ 8.0

Notes: Indexes for the current year are subject to revision. — Nota: Les indices pour l'année courante sont sujets à révision.

Thirty Industrial Materials Price Index (1935-39=100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, advanced 0.6 % to 319.4 in November from the October index of 317.4. Prices were higher for fourteen commodities, lower for four and unchanged for twelve. Principal changes included increases for raw rubber, oats, beef hides, steers, structural shapes, steel sheets, raw cotton, steel bars, wheat and fir timber, while decreases were recorded for raw wool, domestic lead and tin.

Canadian Farm Products Price Index (1935-39=100)

The price index of Canadian farm products at terminal markets advanced 3.7 % to 304.7 in November from the October index of 293.7. An increase of 4.6 % to 203.8 from 194.8 in the field products index reflected higher prices for potatoes and rye on both Eastern and Western markets, for tobacco, barley and corn in the East and hay in the West. Lower prices were shown for hay on the Eastern market. The animal products index advanced 3.3 % to 405.6 from 392.6 on higher prices for steers and lambs on both markets, for butterfat and poultry in the East and for calves and eggs in the West. Lower prices were shown for raw wool on both markets and for calves in the East.

Security Price Indexes (1961=100)

The investors index of common stock prices increased 1.2 % to 181.0 in November from 178.9 in October. Within the three major groups, industrials, utilities and finance rose 0.9 % to 188.4, 0.6 % to 150.6 and 3.5 % to 189.4 respectively. Amongst the thirteen industrial sub-groups, printing and publishing, metal fabricating, petroleum and construction increased to an all time high. The largest increase was registered in retail trade, up 4.1 % to 168.5, while textile and clothing and primary metals declined 3.8 % to 164.2 and 107.7 respectively: they are the most important loses for industrials and they have been declining for at least three months. In utilities, gains predominated, telephone showing the most important increase of 3.8 % to 89.6 while gas distribution lost 4.2 % to 175.4. An all time high in the finance index resulted from banks and investment and loans increasing 3.9 % to 217.2 and 2.2 % to 148.2 respectively.

In the same period the index of mining stock prices declined 4.1 % to 104.5 as a result of decrease in golds of 3.9 % to 110.1 and in base metals of 4.2 % to 102.4.

Of the two supplementary price indexes, uraniums showed a decrease of 6.7 % to 163.8 while primary oils and gas stayed at the same level.

The preferred stock index eased 0.1 % to 71.0 from 70.1 in October.

Indice des prix de trente matières industrielles (1935-39=100)

L'indice des prix de trente matières industrielles, calculé comme moyenne géométrique non pondérée, a progressé de 0.6 % en novembre, passant de 317.4 en octobre à 319.4. Les prix de quatorze marchandises ont augmenté, ceux de quatre marchandises ont baissé et ils sont restés inchangés dans le cas de douze marchandises. Les principaux changements comprennent une augmentation des prix du caoutchouc brut, de l'orge, des peaux de boeuf, des bouvillons, des profilés de charpente, des feuilles d'acier, du coton brut, des barres d'acier, de blé et du bois de sapin; il comprennent également une baisse des prix de la laine brute, du plomb canadien et l'étain.

Indice des prix des produits agricoles canadiens (1935-39=100)

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a progressé de 3.7 % en novembre, passant de 293.7 en octobre à 304.7. Une hausse de 4.6 % de l'indice des produits de grande culture, qui passe de 194.8 à 203.8, est imputable à une augmentation des prix des pommes de terre et du seigle dans l'Est et dans l'Ouest, du tabac, de l'orge et du maïs dans l'Est, et du foin dans l'Ouest. Le prix du foin dans l'Est a baissé. L'indice des produits d'origine animale a augmenté de 3.3 %, passant de 392.6 à 405.6, à la suite d'une augmentation du prix des bouvillons et des agneaux sur les deux marchés, du prix de la graisse de beurre et de volaille dans l'Est, et des veaux et des oeufs dans l'Ouest. On a constaté une baisse des prix de la laine brute sur les deux marchés, et des veaux dans l'Est.

Indices des cours des valeurs mobilières (1961=100)

L'indice des cours des actions ordinaires a progressé 1.2 % en novembre, passant de 178.9 en octobre à 181.0. Parmi les trois grands groupes, les industrielles, les services publics et les finances ont augmenté de 0.9 %, de 0.6 % et de 3.5 % pour atteindre respectivement 188.4, 150.6 et 189.4. Parmi les treize sous-groupes industriels, l'impression et l'édition, la fabrication des métaux, le pétrole et la construction ont atteint un niveau record. La plus forte progression constatée a été celle du commerce de détail, qui a augmenté de 4.1 % pour atteindre 168.5, tandis que les textiles et vêtements ainsi que les métaux primaires ont baissé de 3.8 % pour s'inscrire respectivement à 164.2 et 107.7. Il s'agit là des plus importantes baisses pour les valeurs industrielles; ces valeurs sont en baisse depuis au moins trois mois. Pour ce qui est des services publics, les gains ont dominé, la plus forte progression étant celle du téléphone (3.8 %) qui s'élève à 89.6, tandis que la distribution de gaz a baissé de 4.2 % pour s'inscrire à 175.4. Le record absolu observé pour l'indice de la finance est imputable aux banques et aux placements et prêts qui ont augmenté de 3.9 % et de 2.2 % respectivement pour s'établir à 217.2 et 148.2.

Au cours de la même période, l'indice des prix des titulaires miniers a baissé de 4.1 % pour se fixer à 104.5 à la suite d'une baisse de 3.9 % des aurifères qui s'inscrivent à 110.1 et d'un recul de 4.2 % des métaux communs qui sont tombés à 102.4.

Pour ce qui est des deux indices des prix supplémentaires, on a observé une baisse de 6.7 % dans le cas de l'uranium, qui tombe à 163.8, tandis que le pétrole et le gaz primaires sont restés inchangés.

L'indice des actions privilégiées a légèrement avancé (0.1 %), passant de 70.1 en octobre à 71.0.

The Consumer Price Index for Canada (1961=100) rose 0.2 % to 142.3 in November from 142.0 in October. This latest increase was slightly smaller than that normally recorded between October and November in recent years. Food prices declined 0.1 %, but the index for all items excluding food increased 0.3 % mainly as a result of advances of 0.6 % and 0.4 % in the Housing and Clothing indexes, respectively. The Recreation and Reading component advanced 0.7 % but that for Transportation declined by an equal amount. An increase of 0.3 % was recorded for the Health and Personal Care Index and Tobacco and Alcohol edged up 0.1 %. Between November 1971 and November 1972, the All-Items Index advanced 5.1 %.

The Food index declined 0.1 % to 145.1 in November from 145.3 in October. Last year no change was recorded between these two months. In the latest month, the price level of food consumed at home edged down 0.1 % while restaurant meal prices rose 0.2 %. Whereas most major groups within the food at home component recorded decreases, vegetable prices rose, on average, 6.8 % in response to higher quotations for most fresh and all canned varieties. In contrast, the fruit index, which usually decreases at this time of year, fell 2.8 % mainly as a result of lower prices for most fresh fruit. In the twelve months since November 1971, the vegetable and fruit indexes advanced almost 3 % and 8 %, respectively. In the latest month, the meat, fish and poultry index fell 0.8 % with beef prices declining, on average, 0.9 % as a result of reductions for most cuts in a number of cities. Pork, however, rose in price 0.3 % and poultry prices increased 0.6 % in response to higher quotations for turkey. The meat, fish and poultry index, advancing over 15 % since November 1971, has registered the largest increase for any major food component in the latest twelve months. Between October and November, egg prices fell 3.8 % but were nevertheless 11 % above their level of a year previously. The bakery and cereal products index edged down 0.1 % in the latest month as lower prices on such items as corn flakes and cake mix outweighed scattered price increases for bread. Amongst dairy products, ice-cream prices moved down in Toronto and Winnipeg, and some reductions were recorded for evaporated milk, but fluid milk and butter prices remained unchanged. Amongst other foodstuffs, decreases were registered for ground coffee, soft drinks, tea, shortening and jelly powders, but honey, instant coffee, infants' food and sugar were among the items recording increases. In the twelve months to November 1972, the Food index advanced 9.1 % with the price of food consumed at home increasing 9.5 % and that for restaurant meals 7.1 %.

L'indice des prix à la consommation au Canada (1961=100) a augmenté de 0.2 %, passant de 142.0 en octobre à 142.3 en novembre. Cet accroissement est légèrement inférieur à l'accroissement normalement enregistré ces dernières années entre octobre et novembre. Les prix des aliments ont diminué de 0.1 %, mais l'indice synthétique sans les aliments s'est accru de 0.3 %, en raison principalement des augmentations respectives de 0.6 % et de 0.4 % des indices de l'habitation et de l'habillement. L'indice des loisirs et de la lecture a progressé de 0.7 %, mais celui des transports a diminué dans la même proportion. L'indice des soins personnels et de santé s'est accru de 0.3 % et celui des tabacs et alcools de 0.1 %. De novembre 1971 à novembre 1972 l'indice synthétique a augmenté de 5.1 %.

L'indice de l'alimentation a régressé de 0.1 %, passant de 145.3 en octobre à 145.1 en novembre. L'an dernier, l'indice était demeuré stationnaire entre ces deux mois. Le mois dernier, le prix des aliments consommés à la maison a baissé de 0.1 % tandis que celui des repas pris au restaurant a augmenté de 0.2 %. Alors que les prix des principaux produits alimentaires consommés à la maison ont baissé, le prix des légumes a augmenté en moyenne de 6.8 % par suite d'une hausse du prix de la plupart des produits frais et de tous les produits en conserve. Par contre, l'indice des fruits, qui diminue en général à cette période de l'année, a reculé de 2.8 % en raison principalement d'une baisse de prix de la plupart des fruits frais. Au cours des douze mois écoulés depuis novembre 1971, les indices des légumes et des fruits ont progressé respectivement de près de 13 % et 8 %. Le mois dernier, l'indice de la viande, du poisson et de la volaille a régressé de 0.8 %, le prix du boeuf ayant diminué en moyenne de 2.9 % par suite d'une baisse de prix sur la plupart des morceaux dans un certain nombre de villes. Toutefois, le prix du porc a augmenté de 0.3 % et celui de la volaille a augmenté de 1.6 % par suite d'une hausse du prix de la dinde. L'indice de la viande, du poisson et de la volaille, qui a progressé de plus de 15 % depuis novembre 1971, a enregistré la plus forte augmentation parmi les principaux produits alimentaires au cours des douze derniers mois. D'octobre à novembre, le prix des oeufs a diminué de 3.8 % mais il est demeuré néanmoins à plus de 11 % au-dessus de ce qu'il était un an plus tôt. L'indice des produits de boulangerie et des céréales a régressé de 0.1 % le mois dernier, du fait que la baisse du prix d'articles tels que les flocons de maïs et les mélanges à gâteau a été supérieure aux hausses éparses de prix du pain. Quant aux produits laitiers, le prix de la crème glacée a baissé à Toronto et à Winnipeg, et il y a eu certaines réductions du prix du lait évaporé, mais les prix du lait nature et du beurre sont demeurés stationnaires. Pour ce qui est des autres produits alimentaires, on a enregistré des baisses du prix du café moulu, des boissons gazeuses, du thé, de shortening et de la poudre de gelée; mais le miel, le café instantané, les aliments pour bébés et le sucre, entre autres, ont augmenté de

The Housing index advanced 0.6 % to 146.1 in November from 145.2 in October as a result of increases of 0.9 % and 0.2 % in the shelter and household operation components, respectively. The shelter advance was mainly attributable to a 1.2 % increase in the homeownership element; rents rose 0.1 %. Within household operation, some fuel oil price rises were registered in Montreal and Regina. Furniture quotations increased 0.4 % in the latest month, with scattered advances for a number of items. Rises of 0.5 % and 0.2 % were recorded in the floor coverings and textiles indexes, respectively, the former because of higher carpet prices, the latter as a result of increased curtain and wool blanket quotations. Among other items, higher quotations were recorded for clocks, hardware, glassware and a number of cleaning supplies, but prices for dishes, toilet paper and light bulbs were lower due to sales. Between November 1971 and November 1972, the Housing index advanced 4.7 %.

The Clothing index increased 0.4 % to 134.9 in November from 134.4 in October reflecting an upward movement in prices that usually occurs between these two months. Footwear prices advanced 1.0 % with increases recorded for all items surveyed. The component for men's wear moved up 0.9 % chiefly as a result of higher prices for suits, coats, ski parkas, sweaters and work clothing. A 0.2 % rise in women's wear prices was mostly attributable to increased quotations for some dresses, fur coats and nightgowns. On the other hand, the children's wear index dipped 0.5 % partly because sale prices took effect on some items including boys' trousers and shirts and girls' snowsuits. In the twelve months since November 1971, the Clothing index rose 3.0 %.

The Transportation index decreased 0.7 % to 133.1 in November from 134.1 in October, largely because of a reduction in the price index for new cars which reflected adjustments for quality changes as 1973 models were introduced. Among other items, there was a seasonal decrease in the train fares index, while motor oil quotations rose 0.4 %. In the twelve months to November 1972, the Transportation index increased 1.6 %.

The Health and Personal Care index rose 0.3 % to 151.6 in November from 151.6 in October as a 1.2 % increase in personal care

prix. Au cours des douze mois précédant novembre 1972, l'indice de l'alimentation a avancé de 9.1 % par suite d'une hausse de 9.5 % du prix des aliments consommés à la maison et de 7.1 % dans le cas du prix des repas consommés au restaurant.

L'indice de l'habitation a progressé de 0.6 % pour passer de 145.2 en octobre à 146.1 en novembre, du fait que les éléments logement et entretien du ménage ont augmenté respectivement de 0.9 % et 0.2 %. L'augmentation de l'élément logement est surtout attribuable à un accroissement de 1.2 % des frais de possession d'une maison; les loyers ont été majorés de 0.1 %. Dans le domaine de l'entretien du ménage, des hausses du prix du mazout ont été enregistrées à Montréal et à Regina. Le prix des meubles a augmenté de 0.4 % le mois dernier et des hausses ont été signalées ici et là sur un certain nombre d'articles. Les indices des revêtements de sol et des textiles ont augmenté respectivement de 0.5 % et de 0.2 %, le premier en raison d'une hausse du prix des tapis et le deuxième par suite d'une augmentation du prix des rideaux et des couvertures de laine. Dans le cas des autres articles, on a constaté une hausse du prix des horloges, de la quincaillerie, de la verrerie et de certaines fournitures d'entretien, mais les prix de la vaisselle, du papier hygiénique et des ampoules ont diminué en raison de soldes. De novembre 1971 à novembre 1972, l'indice de l'habitation est monté de 4.7 %.

L'indice de l'habillement a progressé de 0.4 % entre octobre et novembre passant de 134.4 à 134.9 ce qui reflète un accroissement des prix qui se produit habituellement entre ces deux mois. Le prix des chaussures a augmenté de 1.0 %; tous les articles de cette catégorie ont connu des augmentations. L'indice des vêtements pour hommes s'est accrue de 0.9 %, surtout à cause d'une majoration du prix des complets, des manteaux, des anoraks de ski, des chandails et des vêtements de travail. L'augmentation de 0.2 % du prix des vêtements pour femmes est surtout attribuable à l'augmentation du prix de certaines robes, des manteaux de fourrure et des robes de nuit. Par contre, l'indice des vêtements pour enfants a régressé de 0.5 %, en partie à cause des soldes de certains articles, y compris les pantalons et chemises pour garçonnets et les costumes de motoneige pour fillettes. Au cours des douze mois écoulés depuis novembre 1971, l'indice de l'habillement a augmenté de 3.0 %.

L'indice des transports a diminué de 0.7 %, passant de 134.1 en octobre à 133.1 en novembre, en raison surtout d'une régression, avec le lancement des modèles 1973, de l'indice des prix des voitures neuves, qui reflète les rectifications dues aux changements de la qualité. Il y a eu aussi, entre autres, une diminution saisonnière de l'indice de tarifs de chemin de fer, mais une augmentation de 0.4 % du prix de l'huile à moteurs. Au cours des douze derniers mois, jusqu'à novembre 1972, l'indice des transports a progressé de 1.6 %.

L'indice des soins personnels et de santé s'est accru de 0.3 % en novembre, passant à 151.6 en novembre contre 151.2 en octobre, à la suite

service prices outweighed declines for pharmaceuticals and personal care supplies. Widespread increases in women's hairdressing charges together with some higher men's hair-cut prices caused the advance in the personal care services index; in the latest twelve months this index has increased 9.8 %. Among pharmaceuticals, scattered decreases for vitamins and prescriptions outweighed some higher prices for other items including headache tablets and antiseptics, and a number of personal care supplies, notably toilet soap and toothpaste, were on sale. Between November 1971 and November 1972, the Health and Personal Care index advanced 5.4 %.

The Recreation and Reading index advanced 0.7 % to 141.3 in November from 140.3 in October, mainly because of widespread increases in motion picture admission prices. Higher quotations were also recorded for hockey sticks and skates, but prices for camera film (including processing) were lower. Between November 1971 and November 1972, the Recreation and Reading index increased 3.3 %.

The Tobacco and Alcohol index rose 0.1 % to 133.0 in November from 132.9 in October as a result of some higher liquor prices in Winnipeg and Vancouver together with price increases for cigarette tobacco in a number of cities. Between November 1971 and November 1972, the Tobacco and Alcohol index rose 0.1 %.

Consumer price index items, when classified by commodities and services, offer another view of the incidence of the change in prices. In the latest month, the services index advanced 0.6 % because of higher charges for shelter services, theatre admission, women's hairdressing and men's haircuts. On the other hand, the total commodities index registered no change as reduced prices for automobiles and for food offset higher quotations for non-durables other than food. The durable component decreased 0.5 % as the decline in the new automobiles index outweighed scattered increases for furniture, carpets and household utensils and equipment. Prices for non-durable commodities other than food rose 0.2 % as increased quotations for clothing, tobacco, alcohol, cleaning supplies, fuel oil and sports equipment outweighed reductions in pharmaceuticals and toiletries. Between November 1971 and November 1972, the total commodities index advanced 5.0 % while the services component increased 5.4 %.

d'une augmentation de 1.2 % du prix des services de soins personnels qui n'a été contrebalancé qu'en partie par les baisses de prix des produits pharmaceutiques et de soins personnels. La hausse générale des frais de coiffure pour dames et de certains prix de coupe de cheveux pour hommes a contribué à l'augmentation de l'indice des services de soins personnels; au cours des douze derniers mois, cet indice s'est élevé de 9.8 %. Parmi les produits pharmaceutiques, quelques baisses du prix des vitamines et des ordonnances ont été supérieures à la hausse des prix d'autres articles, y compris les comprimés pour le mal de tête et les antiseptiques; de plus, un certain nombre d'articles de soins personnels, principalement le savon de toilette et la pâte dentifrice, ont été l'objet de soldes. Entre novembre 1971 et novembre 1972, l'indice des soins personnels et de santé a augmenté de 5.4 %.

L'indice des loisirs et de la lecture est passé de 140.3 en octobre à 141.3 en novembre, soit une augmentation de 0.7 %, surtout à cause de l'augmentation générale des prix des billets d'entrée au cinéma. Les prix des bâtons de hockey et des patins ont aussi augmenté, mais les prix des pellicules photographiques (comprenant le développement) ont diminué. De novembre 1971 à novembre 1972, l'indice des loisirs et de la lecture s'est accru de 3.3 %.

La hausse de 0.1 % de l'indice des tabacs et alcools, qui est passé de 132.9 en octobre à 133.0 en novembre, provient de l'augmentation du prix de certains alcools à Winnipeg et à Vancouver, ainsi que de l'augmentation du tabac à cigarettes dans un certain nombre de villes. Entre novembre 1971 et novembre 1972, l'indice des tabacs et alcools a augmenté de 2.5 %.

Les différentes composantes de l'indice des prix à la consommation, si on les classe par biens et services, présentent un autre aspect de la variation des prix. Au cours du mois dernier, l'indice des services a augmenté de 0.6 %, à cause de la hausse des frais de services de logement, des billets d'entrée au cinéma, de la coiffure pour dames et des coupes de cheveux pour hommes. Par contre, l'indice de l'ensemble des biens n'a pas varié, car la diminution des prix des biens durables et des aliments a contrebalancé la hausse des prix des biens non durables sans les aliments. L'élément biens durables a régressé de 0.5 %, du fait que la diminution de l'indice des voitures neuves a été supérieure aux diverses augmentations du prix des meubles, des tapis et des ustensiles et accessoires de cuisine. Les prix des biens non durables sans les aliments ont monté de 0.2 %, car l'augmentation du prix des vêtements, des tabacs, des alcools, des produits de nettoyage, du mazout et de l'équipement de sport a dépassé la diminution du prix des produits pharmaceutiques et de toilette. Entre novembre 1971 et novembre 1972, l'indice de l'ensemble des biens a progressé de 5.0 % et l'indice des services, de 5.4 %.

TABLE 1. Summary of Current Price Indexes

TABLEAU 1. Récapitulation des indices des prix courants

	Indexes — Indices				Percentage changes — Variation proportionnelle		
	November 1972 Novembre	October 1972 Octobre	November 1971 Novembre	October 1971 Octobre	Nov. 1972 Oct. 1972	Nov. 1971 Oct. 1971	Nov. 1972 Nov. 1971

Industrial price indexes — Indices des prix dans l'industrie							
Industry selling price index: manufacturing — 1961=100(1) — Indices des prix de vente dans l'industrie: industries manufacturières:							
General wholesale index — (1935-39=100) (2) — L'indice général de gros	129.6	129.0	122.7	122.6	+ 0.5	+ 0.1	+ 5.6
Vegetable products — Substances végétales	322.4	318.7 ^r	293.7	291.3	+ 1.2	+ 0.8	+ 9.8
Animal products — Produits animaux	267.0	258.9 ^r	232.9	231.6	+ 3.1	+ 0.6	+ 14.6
Textile products — Produits textiles	385.8	380.2	336.0	331.5	+ 1.5	+ 1.4	+ 14.8
Wood products — Produits du bois	281.9	283.8	265.1	264.3	- 0.7	+ 0.3	+ 6.3
Iron products — Produits du fer	460.7	456.1 ^r	410.6	401.7	+ 1.0	+ 2.2	+ 12.2
Non-ferrous metals — Métaux non ferreux	331.6	327.4	319.5	319.0	+ 1.3	+ 0.2	+ 3.8
Non-metallic minerals — Minéraux non métalliques	268.9	271.1	257.7	259.0	- 0.8	- 0.5	+ 4.3
Chemical products — Produits chimiques	235.0	234.6	227.4	227.4	+ 0.2	—	+ 3.3
	246.7	245.2	239.1	238.8	+ 0.6	+ 0.1	+ 3.2
Canadian farm products — (1935-39=100) (3) — Produits agricoles canadiens							
Eastern — Total — De l'est	304.7	293.7	265.9	260.8	+ 3.7	+ 2.0	(3)
Western — Total — De l'ouest	334.1	318.7	297.4	290.3	+ 4.8	+ 2.4	+ 12.3
Field — Cultures	275.3	268.8	234.5	231.4	+ 2.4	+ 1.3	(3)
Animal — Animaux	203.8	194.8	167.8	166.5	+ 4.6	+ 0.8	(3)
	405.6	392.6	364.1	355.2	+ 3.3	+ 2.5	+ 11.4
Selected price indexes — (2) — Certains indices de prix							
Thirty industrial materials — (1935-39=100) — Trente matériaux industriels	319.4	317.4 ^r	267.9	266.4	+ 0.6	+ 0.6	+ 19.2
Residential building materials — (1961=100) — Matériaux de construction résidentielle	170.8	168.7	149.1	149.1	+ 1.2	—	+ 14.6
Non-residential building materials — (1961=100) — Matériaux de construction non résidentielle	146.0	145.3	136.0	136.1	+ 0.5	- 0.1	+ 7.4
Consumer price indexes — (1961=100) — Indices des prix à la consommation							
All-items — Tous les éléments	142.3	142.0	135.4	134.9	+ 0.2	+ 0.4	+ 5.1
Food — Alimentation	145.1	145.3	133.0	133.0	- 0.1	—	+ 9.1
Housing — Habitation	146.1	145.2	139.6	138.6	+ 0.6	+ 0.7	+ 4.7
Clothing — Habillement	134.9	134.4	131.0	130.3	+ 0.4	+ 0.5	+ 3.0
Transportation — Transports	133.1	134.1	131.0	131.1	- 0.7	- 0.1	+ 1.6
Health and personal care — Soins personnels et de santé	151.6	151.2	143.8	143.6	+ 0.3	+ 0.1	+ 5.4
Recreation and reading — Loisirs et lectures	141.3	140.3	136.8	136.3	+ 0.7	+ 0.4	+ 3.3
Tobacco and alcohol — Tabacs et alcools	133.0	132.9	129.7	129.6	+ 0.1	+ 0.1	+ 2.5
Security price indexes — (1961=100) — Indices des cours des valeurs mobilières							
Investors index — Total — Indices des portefeuillistes	181.0	178.9	137.9	139.3	+ 1.2	- 1.0	+ 31.3
Industrials — Total — Industriels	188.4	186.8	137.8	140.1	+ 0.9	- 1.6	+ 36.7
Industrial mines — Mines industrielles	118.8	122.4	98.9	103.7	- 2.9	- 4.6	+ 20.1
Foods — Aliments	146.0	148.1	118.6	119.0	- 1.4	- 0.3	+ 23.1
Beverages — Boissons gazeuses	251.6	246.4	186.7	181.2	+ 2.1	+ 3.0	+ 34.8
Textiles and clothing — Textiles et vêtements	164.2	170.7	112.8	106.7	- 3.8	+ 5.7	+ 45.6
Pulp and paper — Pâte et papier	102.4	99.4	78.5	77.1	+ 3.0	+ 1.8	+ 30.4
Printing and publishing — Impression et édition	360.7	348.6	244.0	239.9	+ 3.5	+ 1.7	+ 47.8
Primary metals — Métaux primaires	107.7	112.0	78.4	79.2	- 3.8	- 1.0	+ 37.4
Metal fabricating — Fabrications des métaux	202.3	195.4	144.7	152.4	+ 3.5	- 5.1	+ 39.8
Non-metallic minerals — Minéraux non métalliques	173.2	174.8	136.8	134.2	- 0.9	+ 1.9	+ 26.6
Petroleum — Pétrole	333.1	326.0	224.8	233.3	+ 2.2	- 3.6	+ 48.2
Chemicals — Produits chimiques	108.1	109.2	80.1	78.2	- 1.0	+ 2.4	+ 35.0
Construction — Construction	123.3	120.6	53.5	52.1	+ 2.2	+ 2.7	+ 130.5
Retail trade — Commerce de détail	168.5	161.8	127.7	124.8	+ 4.1	+ 2.3	+ 31.9
Utilities — Total — Services publics	150.6	149.7	139.2	140.0	+ 0.6	- 0.6	+ 8.2
Pipeline — Pipe-line	181.9	182.6	162.3	161.9	- 0.4	+ 0.2	+ 12.1
Transportation — Transport	298.4	298.1	236.6	246.9	+ 0.1	- 4.2	+ 26.1
Telephone — Téléphone	89.6	86.3	91.3	89.6	+ 3.8	+ 1.9	- 1.9
Electric power — Énergie électrique	119.0	117.0	111.6	109.8	+ 1.7	+ 1.6	+ 6.6
Gas distribution — Distribution du gaz	175.4	183.0	195.9	201.0	- 4.2	- 2.5	- 10.5
Finance — Total — Finances	189.4	183.0	139.4	137.3	+ 3.5	+ 1.5	+ 35.9
Banks — Banques	217.2	209.0	162.2	159.8	+ 3.9	+ 1.5	+ 33.9
Investment and loan — Placements et prêts	148.2	145.0	104.7	103.0	+ 2.2	+ 1.7	+ 41.5
Mineral stocks — Actions minier							
General index — Indice général	104.5	109.0	84.3	88.1	- 4.1	- 4.3	+ 24.0
Gold — Or	110.1	114.6	79.7	78.8	- 3.9	+ 1.1	+ 38.1
Base metals — Métaux communs	102.4	106.9	87.6	94.0	- 4.2	- 6.8	+ 16.9
Supplementary indexes — Indices supplémentaires							
Uranium — L'uranium	163.8	175.6	117.9	122.0	- 6.7	- 3.4	+ 38.9
Primary oils and gas — Pétrole et gaz primaires	543.2	543.0	385.2	429.5	—	- 10.3	+ 41.0

Gross weighted, including inter-industry shipments. For explanation see page 82. — Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication, voir page 82.

Indexes for 1972 are subject to revision. — Les indices pour 1972 sont sujets à révision.

Year to year percentage change not shown since these indexes are not comparable. Indexes subsequent to July 1970 are subject to revision. See notes page 82 for details of Western grain prices. — La variation proportionnelle d'une année à l'autre n'est pas indiquée étant donné que ces indices ne sont pas comparables. Les indices postérieurs à juillet 1970 sont sujets à révision. Voir les renvois de la page 82 pour les prix détaillés des grains de l'ouest.

- (1) Indexes for 1972 are subject to revision. - Les indices pour 1972 sont sujets à revision.
(2) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. - Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels:

	Old Series - Ancienne série	New series Nouvelle série
December - 1970 - Décembre	95.1	92.3
January - 1971 - Janvier	95.1	92.1
Average - 1971 - Moyenne	95.2	91.8

(1) Includes gold. - Y compris l'or. (2) Consists of iron products and non-ferrous metals groups above but excluding gold. - Se compose des groupes élémentaires des produits du fer et des produits des métaux non ferreux moins l'or. (3) These two series comprise the General Wholesale Index. - Ces deux séries comprennent l'indice général de gros. (4) Excludes gold. - Sauf l'or. (5) All indexes for current year are subject to revision. - Les données de l'année courante sont sujettes à révision.

Déc.						

) Final to July 1971. See page 82 for details on Western grain prices and specific publications wherein final indexes or earlier years may be found. — Indices définitifs jusqu'en juillet 1971. Pour des données détaillées sur le prix des céréales de l'Ouest, voir page 82 ainsi que les publications spéciales qui contiennent les derniers indices ou ceux des années précédentes.

) All indexes for current year are subject to revision. — Les données de l'année courante sont sujettes à révision.

TABLE 6. Wholesale Price Indexes of Selected Primary Commodities(1)

TABLEAU 6. Indices des prix de gros de certains produits bruts(1)

(1935-39=100)

Primary commodities — Produits bruts	Months — Mois				Annual averages — Moyenne annuelle		
	Nov. 1972	Oct. 1972	Nov. 1971	Oct. 1971	1971	1970	1969
Asbestos, crude — Amiante brut	429.7	429.7	420.6	411.6	399.7
Beans, coffee — Grains de café	393.7	391.5	304.0	300.4	317.4	391.7	302.6
Copper, electrolytic — Cuivre électrolytique ...	463.8	463.8	501.1	501.1	492.5	541.6	483.6
Cotton, raw — Coton brut	323.9	340.7	304.6	300.6	292.1	282.0	276.3
Eggs — Oeufs	149.0	147.6	129.2	118.9	122.1	139.6	161.7
Fruits, fresh — Fruits frais	221.2	227.9	237.5	242.8	230.0	229.6	225.8
Grains — Céréales	242.3	239.2	181.1	180.5	192.3	193.7	200.4
Hides and skins — Cuirs et peaux vertes	396.0	390.3	169.6	159.7	157.6	171.4	185.6
Lead, electrolytic — Plomb électrolytique	314.5	335.4	283.0	283.0	283.0	331.0	318.8
Livestock — Bétail	473.3	454.9	396.8	386.0	386.0	396.2	400.3
Onions — Oignons	336.9	243.3	164.5	169.4	180.8	261.6	221.9
Potatoes — Pommes de terre	276.6	227.3	158.4	155.6	194.2	247.2	170.5
Rubber, raw — Caoutchouc brut	128.0	113.0	115.5	116.7	117.4	140.8	179.3
Scrap iron and steel — Déchets de fer et d'acier	269.7	269.7	264.5	267.3	284.2	328.9	250.0
Silver — Argent	464.1	454.8	347.0	347.0	405.6	478.1	497.5
Steers — Bouvillons	598.4	558.1	569.5	540.9	548.8	510.8	496.6
Sugar, raw — Sucre brut	255.8	256.8	174.2	170.2	178.7	160.9	144.1
Tin — Étain	333.6	346.8	337.4	324.6	324.2	349.6	338.0
Wool, raw domestic — Laine brute indigène	285.9	338.1	139.6	140.5	141.1	152.4	169.1
Wool, raw, imported — Laine brute importée	262.9	269.4	134.0	133.3	135.0	149.3	163.0
Zinc, prime, western — Zinc de première qualité, de l'Ouest	422.5	422.5	378.0	378.0	357.6	341.0	326.1

Apples, volume seller - Pommes du type le plus vendu	109.4	115.8	96.0	105.5	118.8	112.8	128.0
Strawberries, frozen, fancy - Fraises congelées de fantaisie	131.6	128.8	121.7	121.6	121.6	127.6	122.9
Orange juice, conc., frozen, fancy - Jus d'orange concentré et congelé, de fantaisie	106.5	106.7	106.2	105.0	99.3	101.1	106.9
Apple juice, choice - Jus de pomme de choix	120.5	122.6	101.2	102.3	101.4	107.6	113.0(8)
Orange juice, unsweetened - Jus d'orange non sucré	115.0	115.4	113.6	112.9	108.9	108.6	109.5
Pears, canned, choice - Poires en conserve de choix	124.7	124.7	122.7	123.6	120.7	123.7	121.4
Peaches, canned, choice, halves - Pêches en conserve, de choix, moitiés	143.1	142.1	138.3	138.8	135.5	139.0	140.4
Pineapple, Hawaiian, sliced - Ananas de Hawaii, en tranches	96.3	96.4	96.4	96.8	96.1	100.2	99.8
Raisins, Californian and Australian - Raisins secs de Californie et d'Australie	162.7	158.8	148.6	149.8	150.2	153.0	149.2
Vegetables - Légumes							
Potatoes, No. 1 table - Pommes de terre n° 1 de table	140.6	122.7	102.3	95.6	114.7	134.0	123.1
Onions, No. 1 cooking - Oignons n° 1 à cuire	165.0	157.7	121.6	133.9	128.5	157.4	136.4
Carrots - Carottes	106.0	106.5	93.1	92.0	123.4	109.1	108.8
Turnips, Canada No. 1 - Navet canadien n° 1	155.7	157.6	121.6	129.6	125.1	171.0	141.8
Cabbage - Chou	152.0	152.8	99.0	100.1	150.4	167.4	145.2
Tomatoes, fresh - Tomates fraîches	173.0	143.1	135.4	115.8	162.2	143.7	140.5
Celery stalks, green - Céleri en branche, vert	150.2	130.5	142.7	106.1	141.6	150.3	146.7
Lettuce, head, fresh - Laitue pommée fraîche	157.1	154.8	204.3	165.7	160.8	139.9	158.1
Green peas, frozen, fancy - Pois verts congelés, de fantaisie	123.4	122.9	119.0	119.5	118.1	116.1	115.0
Green beans, fr. cut, frozen - Haricots verts coupés, congelés	107.5	107.5	104.1	103.6	102.7	102.4	102.2
Tomatoes, canned, choice - Tomates en boîte, de choix	134.5	133.6	130.5	130.9	128.9	131.6	126.7
Peas, canned, choice - Pois en boîte, de choix	133.1	129.9	120.7	119.8	117.0	125.7	126.5
Corn, canned, cream, choice - Maïs en boîte, en crème, de choix	127.5	124.1	120.6	121.2	119.9	124.7	123.3
Infants' food, vegetable - Aliments pour bébés, légumes	139.5	139.0	130.0	129.6	124.8	118.9	120.1
Beans, with pork and tomato sauce - Haricots au porc à la sauce tomate	138.8	136.3	135.1	135.0	131.6	129.3	126.8
Soup, vegetable - Soupe aux légumes	100.6	100.2	99.2	100.3	99.3	99.7	97.9
Tomato juice, fancy - Jus de tomate de fantaisie ...	110.6	109.7	103.8	104.3	100.4	100.3	98.9(8)
Beverages - Breuvages							
Tea bags - Thé, sachets, orange pekoe	103.0	103.8	100.9	101.6	100.3	101.9	102.5
Coffee, medium quality - Café, qualité moyenne	137.2	138.6	128.8	128.6	132.2	132.4	115.5
Coffee, instant, dried - Café instantané, séché	119.4	118.7	112.2	112.6	112.3	112.9	107.2
Miscellaneous Groceries - Denrées diverses							
Tomato catsup - Ketchup aux tomates	128.9	127.6	121.5	121.9	115.9	112.6	111.6
Peanut butter, plain - Beurre d'arachides, ordinaire	133.5	133.1	134.8	136.1	136.9	139.8	125.0
Pickles, sweet, mixed - Cornichons sucrés variés ...	135.0	133.2	129.7	130.1	127.7	125.3	121.4
Jelly powders, flavoured - Gelée en poudre aromatisée	129.7	130.0	123.7	122.9	121.5	118.0	117.1

(1) Includes cuts with bone-in and boned and rolled. - Y compris les morceaux avec os, sans os et roulés.

(2) Includes cuts with blade-in and blade removed. - Y compris les morceaux avec ou sans palette.

(3) Indexes based on chain store prices in 7 cities. - Les indices sont fondés sur les prix dans les magasins à succursales multiples de 7 villes.

(4) Indexes based on prices for pectin and pure jam combined. - Les indices sont basés sur les prix de la confiture avec pectine et de la confiture pure.

(5) Indexes based on prices in 16 cities. - Les indices sont fondés sur les prix dans 16 villes.

(6) 1965=100. - 100 en 1965.

(7) 1963=100. - 100 en 1963.

(8) June 1968=100. - 100 en juin 1968.

TABLE 11. Consumer Price Indexes, Regional Cities, 1962-72(1)

TABLEAU 11. Indices des prix à la consommation, agglomérations urbaines, 1962-72(1)

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 13. - Nota: (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au Tableau 13.

For explanation see page 85. — Pour de plus amples explications, voir la page 85.

The shelter element of regional cities housing indexes moves on the basis of changes in rents only, whereas in the Canada index this movement is derived from changes in both rents and homeownership costs. See also page 85. — Au niveau des agglomérations urbaines, l'élément logement de l'indice de l'habitation varie selon les changements dans les prix des loyers; par contre, au niveau du Canada, l'élément logement tient compte à la fois des changements dans les prix des loyers et dans les frais de possession d'une maison. Voir la page 85.

Déc.										

(3) Includes shelter and household operation. The shelter element of regional city housing indexes moves on the basis of changes in rents only, whereas in the Canada index this movement is derived from changes in both rents and home-ownership costs. See also page 85. — Comprend le logement et l'entretien du ménage. Au niveau des agglomérations urbaines, l'élément logement de l'indice de l'habitation varie selon les changements dans les prix des loyers; par contre, au niveau du Canada, l'élément logement tient compte à la fois des changements dans les prix des loyers et dans les frais de possession d'une maison. Voir aussi la page 85.

Déc.							
Average - Moyenne							

1) Indexes for current year are subject to revision. - Les données de l'année courante

1) Indexes for current year are subject to revision. - Les données de l'année courante sont sujettes à révision.
 2 & 3) From Tables 18 and 19. - Provenant des Tableaux 18 et 19.

4) Weights used to combine wage rate series. - Coefficients de pondération utilisés pour réunir les séries sur les taux de rémunération: (Source: Dept. of Labour)

	(Source: Ministère du Travail)
Labourer - Ouvrier	46
Carpenter - Menuisier-charpentier	30
Painter - Peintre	7
Electrician - Électricien	5
Plumber - Plombier	5
Bricklayer and Mason - Briqueteur et maçon	5
Sheet Metal Worker - Tôlier	3
Truck Driver - Conducteur de camion	2
Total	2
	100

5) Implicit weights of the 1961=100 arithmetically converted indexes, materials 51.9, wages 48.1. - Coefficients implicites de Pondération obtenus par conversion arithmétique à 1961=100, matériaux 51.9, main-d'oeuvre 48.1.
 6) Implicit weights materials 55.1, wages 44.9. - Coefficients implicites de Pondération, matériaux 55.1, main-d'oeuvre 44.9.
 7) National Income and Expenditure Accounts, Catalogue 13-001, quarterly. - (N° 13-001 au catalogue, trimestriel).
 8) This series contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in contractors profit and productivity. - Cette série comprend une composante génie aussi bien qu'une composante construction; elle n'a donc pas tout à fait la même portée que l'indice synthétique pour la construction non-résidentielle. Les indices synthétiques sont corrigés des variations des profits et de la productivité des entrepreneurs.
 For further detailed explanation see Prices and Price Indexes - May 1970. Pour des explications détaillées voir Prix et indices de prix - Mai 1970.

TABLE 26. Price Indexes of Electric Utility Construction, Canada, Annually 1957 Forward
1961=100

TABEAU 26. Indice des prix à la construction dans les services d'électricité, Canada, par année depuis 1957

Item - Article	Year - An														
	1957	1958	1959	1960	1961	1962	1963	1964	1965	1966	1967	1968	1969	1970	1971P
distribution systems - Total(6) - Réseaux de distribution	96.5	93.2	96.8	100.3	100.0	101.8	102.5	104.6	107.1	112.4	116.1	115.6	120.3	129.3	133.4
Construction - Construction	91.9	93.5	96.3	98.5	100.0	102.5	105.2	107.7	112.3	118.4	125.3	126.3	133.0	144.5	149.0
Equipment - Matériel	106.6	92.5	97.9	104.3	100.0	100.4	96.4	97.6	95.4	99.0	95.7	91.8	91.8	95.4	98.7
transmission lines - Total(6) - Lignes de transmission	94.4	95.7	97.0	98.9	100.0	100.9	102.3	102.7	108.5	113.0	118.7	121.9	127.5	136.5	141.9
transformer stations - Total(6) - Postes de transformation	118.1	109.0	113.5	109.8	100.0	105.1	107.6	112.0	118.0	122.4	121.2	117.2	120.4	132.2	138.6
Structures and improvements - Installations et améliorations	105.6	101.3	102.6	103.3	100.0	102.6	108.9	112.9	124.0	131.0	127.2	123.5	131.3	137.4	139.0
Equipment - Matériel	132.6	118.4	123.2	115.7	100.0	105.9	107.3	111.9	117.4	120.4	115.1	106.7	106.1	119.4	125.2
hydro-electric generating stations(7) - Centrales d'énergie hydro-électrique(7)					100.0	102.7	106.0	109.5	114.8	121.8	126.2	131.3	139.2	147.8	153.1

To assist comparison with other published series the indexes presented have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request. - Afin de faciliter la comparaison avec les autres séries publiées, les indices qui figurent ici ont été l'objet d'une conversion arithmétique portant l'indice à 100 en 1961 au lieu de 1956. Les indices calculés sur la base de 100 en 1956 sont fournis sur demande.

The years referred to are fiscal years. For example 1956 represents the period April 1, 1956 to March 31, 1957. - Les années données ici sont des années financières. Par exemple, l'année 1956 représente la période allant du 1^{er} avril 1956 au 31 mars 1957.

Major components for the provincial indexes were presented in the November 1970 issue of Prices and Price Indexes. - Les principaux éléments des indices pour les provinces ont paru dans la livraison de novembre 1970 de Prices and Price Indexes.

Direct comparisons should not be made between this index and the highway index published by the Ont. Dept. of highways. The item content of the indexes is different. - On ne peut comparer directement cet indice avec celui de la voirie publié par le Ministère de la voirie de l'Ontario. Les éléments des deux indices sont différents.

For further detailed explanation see Prices and Price Indexes - March 1971. - Pour plus de renseignements, voir Prices and Price Indexes. - mars 1971.

For further detailed explanation see occasional paper 62-526. - Pour plus de renseignements, voir le bulletin hors série N° 62-526 au catalogue.

For further detailed explanation see occasional paper 62-533. - Pour plus de renseignements, voir le bulletin hors série N° 62-533 au catalogue.

Explanation of Methods Used and Additional
Sources for Price Series

Industrial Price Indexes

Industry Selling Price Indexes (1961=100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced are responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue No. 62-528.

Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

Purchase Price Indexes of Secondary Metals
(1969=100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Canadian Farm Products Price Index (1935-39=100)

Prices of Western wheat used in the index prior to August 1972, are buying prices of the Canadian Wheat Board for Nos. 1, 2 and 3 Northern at Thunder Bay. From August 1, 1972 forward, prices used are for Nos. 1 and 2 C.W. Red Spring 14 % at Thunder Bay. Prices for western oats and barley are also supplied by the Wheat Board. Initial payments are first used in the index calculation and are revised as further payments are announced.

Final payments for the crop year August 1970 - July 1971 were announced on February 11, 1972 for wheat, and on June 21, 1972 for oats. No final payment was granted for barley for the 1970-71 crop year, however, the initial payment was increased by 10¢ on February 25, 1971.

Explication des méthodes utilisées et sources
supplémentaires des séries de prix

Indices des prix industriels

Indices des prix de vente dans l'industrie (1961=100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial de produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles on recueille des statistiques sur les expéditions de produits, sur l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", n° 62-528 au catalogue.

Indices des prix de vente dans l'industrie: Industries manufacturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix des livraisons des industries manufacturières qui utilisent de la farine comme ingrédient de leurs produits, tels que le pain, les biscuits ou les gâteaux.

Indices du prix d'achat des métaux de deuxième fusion
(1969=100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice des prix des produits agricoles canadiens (1935-39=100)

Les prix du blé canadien sur lesquels étaient basés le calcul de l'indice avant le mois d'août 1972 étaient les prix payés par la Commission canadienne du blé pour le blé nos 1, 2 et 3 du Nord à Thunder Bay. À compter du 1^{er} août 1972, les prix utilisés sont ceux du blé rouge de printemps, nos 1 et 2 (14 %) à Thunder Bay. Pour calculer l'indice, on se sert d'abord des premiers paiements et on les rectifie à mesure que d'autres paiements sont annoncés.

Les prix définitifs pour la campagne allant d'août 1970 à juillet 1971 ont été annoncés le 11 février 1972 en ce qui concerne le blé et le 21 juin 1972, en ce qui concerne l'avoine. Il n'y a pas eu de dernier paiement pour l'orge en 1970-1971; toutefois, le paiement initial a été majoré de 10 cents le 25 février 1971.

 (4) Used in current indexes. — Utilisé dans les indices courantes.

General Wholesale Index (1935-39=100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things

Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité, l'expression "de gros" fait penser plus au commerce de gros qu'au niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de dire exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, cet indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix des produits. En

are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: Wholesale Price Indexes 1913-50 (Reference Paper No. 24) Prices and Price Indexes 1949-52 (Vol. 23) (Catalogue No. 62-501).

Thirty Industrial Materials,
1935-39 = 100

The price index of thirty industrial materials is calculated as an unweighted geometric average prices of the selected commodities. The formula is as follows:

$$\frac{\sqrt[30]{P_{tN}^1 \times P_{tN}^2 \times P_{tN}^3 \times \dots \times P_{tN}^{30}}}{\sqrt[30]{P_{t \ 35-39}^1 \times P_{t \ 35-39}^2 \times P_{t \ 35-39}^3 \times \dots \times P_{t \ 35-39}^{30}}}$$

The selection of materials for pricing related to groups such as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We plan to construct an index of industrial prices that will relate to current usage of materials and that will be of the more traditional Laspeyres type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

tant que chiffre représentatif classique, on a eu tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros, consulter Wholesale Price Indexes 1913-50 (Reference Paper No. 24) et Prices and Price Indexes 1949-52 (Vol. 23) (n° 62-501 au catalogue).

Indice des prix de trente matières industrielles
(1939-39 = 100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

$$\frac{\sqrt[30]{P_{tN}^1 \times P_{tN}^2 \times P_{tN}^3 \times \dots \times P_{tN}^{30}}}{\sqrt[30]{P_{t \ 35-39}^1 \times P_{t \ 35-39}^2 \times P_{t \ 35-39}^3 \times \dots \times P_{t \ 35-39}^{30}}}$$

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

Retail Price Indexes

Consumer Price Index for Canada (1961=100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services of items for which there is a continually measurable market price over time, corresponding to a specific quantity of the item.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index is unlikely to represent closely the experience of any one family within the group nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families - (a) living in cities with over 30,000 population, (b) ranging in size from two adults to two adults with four children, and (c) with annual incomes during 1957 ranging from \$2,500 to \$7,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In 1952, the time base was updated to 1949=100 from 1935-39=100 and, at the same time, weights were revised to reflect family expenditure patterns in 1947-48. A subsequent revision of weights based on 1957 expenditures was introduced at the beginning of 1961 and the time base was revised from 1949=100 to 1961=100 at the beginning of 1969.

Full details on the latest weighting patterns and time base revisions are available in the occasional paper "The Consumer Price Index for Canada (1949=100) - Revision based on 1957 Expenditures", Statistics Canada Catalogue No. 62-518 and in the January 1969 issue of the monthly bulletin, Prices and Price Indexes, Catalogue No. 62-002.

Consumer Price Indexes for Regional Cities (1961=100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). The regional indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada except for their individual weighting systems.

Also, city indexes are not as comprehensive in price content as the Canada consumer price index and may underestimate slightly the degree of price movements occurring. In this connection, the shelter component of the city indexes moves on the basis of changes in rents only, whereas changes in both rents and homeownership costs are included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and all-items indexes for cities have tended to underestimate somewhat the rates of price increase, particularly over longer periods. Studies are under way to incorporate homeownership prices in city indexes.

Each index is designed to measure the influence of changes in retail prices taking place in the localities specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in those particular areas.

Indices des prix de détail

Indice des prix à la consommation au Canada (1961=100)

L'indice des prix à la consommation sert à mesurer le taux de variation du prix qu'il en coûte pour acheter un "panier" de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" demeure le même; il équivaut tout au moins à une quantité égale de biens et services de qualité égale; de plus, il est constitué de produits pour lesquels on peut toujours trouver sur le marché un prix mesurable et correspondant à une quantité déterminée de ce produit.

L'indice porte sur un groupe étendu mais bien déterminé de familles urbaines et rend compte des variations des prix auxquelles l'échantillon en question a dû faire face. Il est fort peu probable que l'indice représente fidèlement l'expérience d'une famille en particulier; de même, il ne faut pas s'attendre à ce qu'il rende compte des variations des prix auxquelles ont fait face des groupes sensiblement différents par le revenu, la taille de la famille et le lieu de résidence. L'échantillon sur lequel porte l'indice est composé de familles - a) vivant dans des villes de plus de 30,000 habitants, b) dont la taille oscille entre deux adultes et deux adultes avec quatre enfants et c) dont le revenu annuel en 1957 oscillait entre \$2,500 et \$7,000. Pour évaluer l'influence des variations de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation porte sur les variations d'environ 300 articles.

L'indice des prix à la consommation au Canada remonte au début du siècle; depuis lors, on a révisé périodiquement la période de référence et les schémas de pondération. Ainsi, en 1952, la période de référence est passée de 1935-1939=100 à 1949=100; à la même occasion, les poids ont été revus de façon à présenter un reflet de la structure des dépenses des familles en 1947-48. La révision suivante des facteurs de pondération était fondée sur les dépenses des consommateurs en 1957 et fut introduite au début de 1961. Enfin, c'est au début de 1969 qu'on porta la période de 1949=100 à 1961=100.

Le lecteur trouvera de plus amples renseignements sur les dernières révisions du schéma de pondération et de la période de référence dans la publication occasionnelle "The Consumer Price Index for Canada (1949=100) - Revision based on 1957 Expenditures" (n° 62-518) et dans la livraison de janvier 1969 du bulletin mensuel "Prices and Price Indexes" (n° 62-002).

Indices des prix à la consommation dans certaines agglomérations urbaines (1961=100)

Ces indices sont publiés mensuellement dans le présent bulletin (voir Tableau 11). Par leur conception et par les éléments qui les composent, ces indices sont en général similaires à l'indice des prix à la consommation au Canada, seuls leurs coefficients de pondération diffèrent.

Aussi, les indices de prix dans les villes ne représentent pas les prix de façon aussi complète que l'indice des prix à la consommation au Canada et ils peuvent sous-estimer légèrement l'importance des mouvements de prix. C'est ainsi que l'élément "logement" des indices des villes varie en fonction des changements dans les loyers uniquement, alors que l'indice pour l'ensemble du Canada comprend les loyers et les coûts de propriété. À la suite d'une augmentation des coûts de propriété plus rapide que celle des loyers, les indices de l'habitation et de tous les éléments pour les villes ont tendu à sous-estimer quelque peu les taux de croissance des prix, surtout sur de plus longues périodes de temps. On étudie actuellement l'incorporation des prix de propriété dans les indices des villes.

Chaque indice est conçu de façon à mesurer les conséquences des variations des prix de détail survenues dans les agglomérations en question sur le prix d'un panier constant de biens et de services représentant la consommation d'un groupe représentatif de familles appartenant à ces secteurs.

In using the city indexes, it should be remembered that they are not indicators of comparative levels of prices as between the cities. That is, they do not in any way indicate whether prices are higher or lower in one city than in another.

For comparisons of retail price differentials between cities see Table 14 of this publication and the relevant explanatory note.

Historical Consumer Price Indexes (1969=100) for "Thunder Bay" and "Quebec City" are available, with explanatory notes on request from Retail Prices Section, Prices Division, Statistics Canada.

Measuring the Purchasing Power of Earnings

Changing consumer price levels affect the amounts of goods and services which a dollar will buy, and average earnings, of course, will be affected in the same way. An earnings measurement which takes the change of consumer prices into account, can be calculated by reducing actual earnings averages by the percentage amounts consumer price levels rise, or increasing them by the amount price levels fall. The adjusted averages may be used to indicate the comparative quantities of goods and services which could be purchased by average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100 in week B, and that in the same interval a consumer price index advances from 100.0 to 110.0. Because of the 10 % rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. Likewise, a 25 % rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price increase. The adjusted average is \$90.91 ($100.0/110.0 \times \$100.$), which may be referred to as a weekly wage average for week B expressed in the dollars of period A, or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express in index number form the relationship between the week A average of \$80.00 and the week B figure of \$90.91. Taking the week A average of \$80.00 as equal to 100.0, the week B index becomes 113.6 ($90.91/80.00 \times 100.0$). Such an index may be called an index of weekly real wages. It indicates that average wages for week B will buy 13.6 % more goods and services than those received in week A, in spite of a 10 % rise in consumer prices. This 13.6 % increase in real wages compares with the rise of 25 % in money wages ($100.00/80.00 \times 100.0$).

It should be noted that while the estimates of average real wages may reflect the experiences of broad groups of workers fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular income group. Group-spending patterns change over periods of time. To the extent that this occurs, the earnings data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be rendered

Le lecteur devra toujours garder en mémoire que ces indices ne sont pas des indicateurs qui permettent de comparer le niveau des prix d'une ville à l'autre et qu'ils n'indiquent en aucune façon si les prix sont plus ou moins élevés dans une ville que dans une autre.

Pour étudier les différences de prix au détail entre les villes, il faut consulter le Tableau 14 de ce bulletin et les notes explicatives qui l'accompagnent.

Les indices chronologiques des prix à la consommation (1969=100) pour Québec et Thunder Bay et les notes explicatives qui les accompagnent peuvent être obtenus de la Section des prix de détail de la Division des prix de Statistique Canada.

Calcul du pouvoir d'achat

Toute variation des prix à la consommation influe directement sur la quantité de biens et de services qu'on peut acheter avec un dollar et par conséquent sur le revenu moyen. Pour mesurer le revenu en tenant compte de la variation des prix à la consommation, on peut déduire du revenu moyen réel le montant proportionnel qui correspond à l'augmentation des prix à la consommation ou ajouter au revenu réel le montant qui équivaut à la diminution des prix à la consommation. Ces moyennes corrigées peuvent ensuite servir à déterminer la quantité de biens et de services qu'on aurait pu acheter grâce à un revenu moyen, les prix à la consommation et les habitudes de consommation n'ayant pas changé. On trouvera ci-dessous des exemples de cette méthode.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B et que dans la même période de temps l'indice des prix à la consommation progresse de 100.0 à 110.0. En raison de l'augmentation de 10 % des prix à la consommation, on n'obtiendra plus autant avec \$1 au cours de la semaine B que pendant la semaine A. De même il serait exagéré de dire que, pour une augmentation de la rémunération de \$80 à \$100 le pouvoir d'achat du salaire hebdomadaire moyen s'est élevé de 25 %. On peut ramener cette augmentation à des proportions plus justes en réduisant du nouveau salaire hebdomadaire moyen l'augmentation des prix à la consommation. La rémunération moyenne corrigée s'établira donc à \$90.91 ($100.0/110.0 \times \$100.$), dont on peut dire qu'elle exprime la rémunération hebdomadaire moyenne de semaine B en dollars de la semaine A, ou encore qu'elle rend compte du niveau effectif de la rémunération hebdomadaire de semaine B par rapport à la semaine A.

On peut pousser plus loin les calculs et exprimer à l'aide d'un indice la relation entre le salaire moyen de la semaine A (\$80) et celui de la semaine B (\$90.91). Ainsi, si l'on considère que la rémunération moyenne de \$80 de la semaine A était égale à 100.0, l'indice de la semaine B deviendra 113.6 ($90.91/80.00 \times 100.0$). On pourrait appeler cet indice l'indice de la rémunération hebdomadaire effective; il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter 13.6 % de plus en biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10 % des prix à la consommation. L'augmentation de 25 % des salaires se ramène donc à une augmentation effective de 13.6 % ($100.0/80.00 \times 100.0$).

Il convient de souligner que, même si les estimations de la rémunération moyenne effective résument assez bien la situation d'un large éventail de travailleurs, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur le revenu porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur le revenu ramené à juste par l'indice des prix à la consommation (les habitudes de consommation étant "fixes") perdront graduellement de leur

less valid. Finally, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce savings to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual and real wages uses 1961 as a reference year. However, the adjustment made in the foregoing illustration can be applied to any reference level; percentage change between any two periods will be the same regardless of the reference period selected.

Inter-City Retail Price Comparisons

Statistics relating to differences in retail prices between Canadian cities were initially developed for food, and subsequently extended to cover such other elements of the family budget as clothing, transportation, household operation, health and personal care, recreation and reading, and tobacco and alcohol. In all, inter-city price comparisons are drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based with the major omission being shelter (both rented and owned.) While recognizing the importance of shelter differentials in any overall comparison of the general price level being encountered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require further research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

Table 14 presents the results of an updating of earlier spatial retail price measurements to May 1971 and includes more complete data on several cities. A fuller explanation of the study from which this table is derived is contained in the November 1968, November 1969 and April 1972 issues of *Prices and Price Indexes* (Statistics Canada, Catalogue Number 62-002).

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price indexes. In developing these spatial price comparisons efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices calling 100 to facilitate comparisons over the whole range of cities. Except for foodstuffs and new passenger cars for which inter-city price differentials were

valeur. Enfin, il ne faut pas oublier qu'une partie du revenu peut être consacrée à l'épargne et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations du revenu effectif calculées à partir de moyennes du revenu brut peut différer de l'évaluation des variations du pouvoir d'achat du revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de la rémunération effective ne sert pas à mesurer les variations des niveaux de consommation des salariés et de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente la rémunération tant réelle qu'effective prend pour base l'année 1961. Toutefois, les ajustements illustrés dans les exemples ci-dessus peuvent s'appliquer à tout niveau de référence; la variation proportionnelle entre deux périodes sera en effet identique quelle que soit la période de référence choisie.

Comparaisons entre les prix de détail d'une ville à l'autre

À l'origine, la statistique des différences entre les prix de détail d'une ville du Canada à l'autre a été mise au point pour l'alimentation; par la suite, on l'a étendue à d'autres postes du budget familial tels que l'habillement, les transports, l'entretien du ménage, la santé et les soins personnels, les loisirs et la lecture, et le tabac et l'alcool. Au total, les comparaisons d'une ville à l'autre portent sur des biens et des services constituant près des trois quarts du budget servant actuellement à construire l'indice des prix à la consommation au Canada, la seule grande omission étant le logement (location et frais de possession). Sans vouloir nier l'importance des différences en ce qui concerne le logement dans toute comparaison globale du niveau général des prix aux quels les consommateurs doivent faire face dans divers centres urbains, il faut bien dire que les problèmes que comporteraient l'établissement d'une comparaison valable d'une ville à l'autre sont tels qu'ils nécessitent plus de recherche. Entre-temps, on estime que malgré l'absence actuelle de données sur les dépenses de logement, la publication de comparaisons des prix de détail pour d'autres postes du budget permettra de faire de gros progrès en ce qui concerne la satisfaction des besoins variés des utilisateurs.

On trouvera au Tableau 14 le résultat d'une mise à jour de mesures de prix de détail tirées précédemment jusqu'à mai 1971, ainsi que des données plus complètes sur plusieurs villes. Une explication plus détaillée de l'étude dont le tableau en question est tiré figure dans les livraisons de novembre 1968, novembre 1969, et avril 1972 de *Prices and Price Indexes* (n° 62-002 au catalogue).

Les premières données de base pour la présente étude ont été constituées par l'importante collection de prix de détail recueillie lors de la confection des indices nationaux et urbains des prix à la consommation. Au moment d'établir ces comparaisons géographiques de prix, on s'est efforcé d'assurer la comparabilité en prenant des biens et des services de qualité égale et en assortissant autant que possible les points de vente au détail par type. Les relations de prix entre paires de villes ont été calculées puis converties à la base commune des prix de Winnipeg = 100 afin de faciliter des comparaisons pour l'ensemble de toutes les villes. Sauf pour les denrées alimentaires et les voitures neuves, pour lesquelles les dif-

derived directly from new comparisons based on May 1971 price data, the updating of these measurements of inter-city retail price differentials was accomplished by application of the relative movement of prices, at the item level in each city, over the intervening periods as derived from the relevant city consumer price indexes. These price relationships at the item level were aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns exist among cities, the magnitude of these differences in the cities covered is not such as to affect most of the spatial comparisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-urban retail price differentials, aggregative indexes beyond major budget groupings are not shown.

It should be noted that the retail prices used in this comparisons, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of non-food commodities can be of significance in explaining inter-city price differentials for these items.

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.

Farm Input Price Indexes (1961=100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. These data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961=100 time base.

Farm Input Price Indexes replace one of the two major component indexes of the previously published series, Price Index Numbers of Commodities and Services Used by Farmers, 1935-39=100. The latter index was composed of a Farm Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replaces the Composite Index Exclusive of Living Component from 1961 forward.

A detailed description of concepts, methods and data sources is contained in the occasional paper, Farm Input Price Indexes, 1961=100, Catalogue No. 62-534, and is reproduced in the September 1971 issue of Prices and Price Indexes, Catalogue No. 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, Farm Input Price Indexes, 1961=100, Catalogue No. 62-004, and in the monthly publication Prices and Price Indexes, Catalogue No. 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterpart, and publication has been suspended.

différences de prix entre villes ont été tirées directement de nouvelles comparaisons fondées sur les données de mai 1971, la mise à jour de ces mesures des différences de prix de détail entre les villes a été assurée grâce l'extension des mouvements relatifs de prix au niveau de chaque article dans chaque ville aux périodes observées selon le calcul établi à partir de l'indice des prix à la consommation pour la ville en question. Ces relations entre les prix au niveau de l'article ont été agrégées sur la base des habitudes de consommation du citoyen pour l'ensemble du Canada et non pas selon les habitudes de dépense applicables à des villes individuelles. Même s'il existe des différences dans les habitudes de dépense d'une ville à l'autre, l'importance de ces différences en ce qui concerne les villes dont il est question ici ne sont pas suffisantes pour influencer sensiblement sur la plupart des comparaisons géographiques. Du fait de l'absence des relations de prix en ce qui concerne le logement, dont il a déjà été question ci-dessus et qui pourrait avoir une importance considérable chaque fois que l'on voudrait tirer une comparaison globale entre les différences de prix à la consommation au détail d'une ville à l'autre, on ne trouvera ici aucun indice synthétique agrégé au-delà des principales composantes du budget.

Il faut remarquer que les prix de détail ayant servi à la présente comparaison sont ceux que doit payer le consommateur et comprennent donc les taxes de vente et les taxes d'accises qui peuvent s'appliquer. Les différences d'une province à l'autre entre les barèmes de taxe de vente imposés sur une grande variété de biens non alimentaires peut avoir une grande importance pour expliquer les différences de prix d'une ville à l'autre pour les articles en question.

Le fait que ces indices aient été exprimés en prenant Winnipeg = 100 ne signifie pas que le choix de Winnipeg comme ville de référence ait une signification particulière et les indices pourraient être exprimés sur la base de n'importe laquelle des villes qui y figurent.

Indices de prix des entrées dans l'agriculture (1961=100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui y sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961=100.

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39=100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

Le bulletin hors série Farm Input Price Indexes, 1961=100 (n° 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est reprise dans Prices and Price Indexes de septembre 1971 (n° 62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest du Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel Farm Input Price Indexes, 1961=100 (n° 62-004) et dans le bulletin annuel Prices and Price Indexes (n° 62-002).

On n'a pas remplacé l'indice du coût de la vie pour la famille agricole des séries de 1935-39 par un équivalent à jour et on a cessé de le publier.

Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto, Montreal and Canadian stock exchanges. The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the common and mining stock indexes are Thursday's closing quotations as reported in the Globe and Mail and the Montreal Gazette. For preferred stocks, prices are monthly weighted averages of the daily closing prices in which weights are daily total sales. The price reference base for the indexes is the year 1956 which has been adopted as an interim base for recently developed Statistics Canada indexes. The indexes express prices as a percentage of prices in 1956 and arithmetically converted to the 1961=100 base.

Revised indexes on the base 1956=100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the index, apart from the shift in the price reference base, is the classification of stocks according to the Standard Industrial Classification. In the continuing major group Industrials 4 sub-groups (Milling and Grains, Food and Allied Products, Machinery and Equipment, and Building Materials) have been replaced by 8 new sub-groups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-Metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of the former index, viz., Industrial Mines, Beverages, Textile and Clothing, Pulp and Paper, and Oils (renamed Petroleum) have been continued. The major group Utilities is continued but the Pipelines index has been added as a sub-group and the previous Power and Traction sub-group has been replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A new major group Finance is composed of the former major group Banks and the former supplementary index Investment and Loan. Constant weights, which were previously limited to major groups, have been extended to sub-groups. Weights in the index continue to be based on shares outstanding.

For the list of stocks currently included in the Inventors Index and Preferred Index, see Prices and Price Indexes for February 1972.

Residential and Non-Residential Building Construction Price Indexes

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of users (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of Prices and Price Indexes, and this explanation is available on request from the Prices Division, as is historical monthly data for the series.

Because the indexes measure the impact of price change on the materials and labour inputs to construction, and not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as indicators of price change for the output of building construction, or buildings in place. Users are therefore warned to exercise caution in making use of the series, for this purpose. A comparison of these series with the implicit price deflators⁽¹⁾ providing an estimate of price change for the output of the industry, derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of adjusting the fixed-weighted input indexes for changes in productivity and profit margins.

Indices des cours des valeurs mobilières

Les indices des cours des valeurs mobilières donnent une mesure dans le temps de l'effet du mouvement des prix sur la valeur d'un portefeuille de titres achetés et détenus par un placeur hypothétique (et non pas un spéculateur). Le portefeuille représente des titres des sociétés canadiennes cotées à la Bourse de Toronto, de Montréal et à la Bourse canadienne. Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation. Les indices des prix des titres ordinaires et des titres miniers sont les cours de fermeture de la Bourse du jeudi indiqués dans le Globe and Mail et dans la Montreal Gazette. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles du total des ventes quotidiennes. La base de pondération entre les sous-groupes est l'année 1956. Toutes les séries ont été recalculées sur la base de 1961=100. Les indices sont pondérés d'après le nombre d'actions en circulation.

Les indices révisés sur la base 1956=100 ont été publiés pour la première fois dans la livraison de juin 1962 de ce bulletin. La plus importante modification à la révision de l'indice, à part le changement de la période de référence, a été le classement des actions d'après la Classification des activités économiques. Dans le cas du grand groupe des valeurs industrielles, 4 sous-groupes (minoterie et céréales, aliments et produits connexes, machines et matériel et matériaux de construction) ont été remplacés par 8 nouveaux sous-groupes (aliments, imprimerie et édition, métaux primaires, produits métalliques, minéraux non métalliques, produits chimiques, construction et commerce de détail). On a conservé les 5 autres sous-groupes de l'ancien indice: mines industrielles, boissons, textiles et habillement, pâtes et papiers, et huiles (sous la désignation de pétrole). Le grand groupe des services d'utilité publique a été conservé mais l'indice des pipe-lines a été ajouté comme sous-groupe et l'ancien sous-groupe d'énergie et traction a été remplacé par deux nouveaux sous-groupes: l'énergie électrique et la distribution du gaz. Le nouveau grand groupe "Finances" est composé de l'ancien grand groupe banques et de l'ancien indice supplémentaire investissements et prêts. Les facteurs constants de pondération qui étaient autrefois limités aux grands groupes s'appliquent maintenant aux sous-groupes. Les facteurs de pondération de l'indice continuent à être basés sur les actions en circulation.

La liste des titres repris actuellement dans les indices des valeurs de placements et dans les indices des valeurs privilégiées se trouve dans Prix et indices des prix de février 1972.

Indices des prix de la construction résidentielle et non résidentielle

Les indices à pondération fixe des prix des entrées de matériaux et de salaires dans la construction résidentielle et non résidentielle sont publiés ici pour faciliter la tâche aux utilisateurs (Tableau 20). On trouvera une description plus détaillée des caractéristiques des indices dans Prices and Price Indexes de mai 1970. On peut s'en procurer un exemplaire ainsi que les données mensuelles chronologiques sur cette série en s'adressant à la Division des prix.

Comme les indices mesurent l'influence des variations de prix sur les entrées de matériaux et de main-d'œuvre du bâtiment plutôt que les répercussions des variations de marges bénéficiaires ou de productivité, on les croit surestimés en tant qu'indicateurs des variations de prix de la construction, ou des bâtiments construits. Les utilisateurs devront donc faire preuve de discernement quand ils se serviront des séries à cette fin. Si l'on compare ces séries avec les facteurs de dégonflement⁽¹⁾ des prix implicites (qui donnent une estimation de la variation du prix pour la production de l'industrie), obtenus en mesurant la formation brute de capital fixe en dollars constants, on aura un aperçu des effets de l'ajustement sur l'évolution des prix des indices à pondération fixe des entrées pour tenir compte des variations de productivité et de marges bénéficiaires.

(1) Division du revenu national et de la défense nationale, Statistique Canada.

During the period from 1926-1966 a special sample of respondents supplied materials prices for the index. As of 1961 this sample has been replaced with prices from the ISPI system(2). The latter are published monthly in Table 2 of this publication.

The Construction wage rate series is based on wage rate material supplied by the Labour Standards Branch, Dept. of Labour, and relates to minimum wages paid on government contracts for construction in a variety of trades and cities.

Users are reminded that the indexes were arithmetically rebased to the year 1961=100 and therefore combining the components with the weights as shown will not provide the composite index provided. Users able to provide their own weights for the components can recombine the components to suit their particular needs.

Basic Union Wage Rate Indexes for Major Construction Trades

Basic union wage rate indexes are prepared for 12 major construction trades in each of 14 cities in Canada. Weighted average city indexes are prepared as well as a 14 city composite. Indexes are released quarterly in summary form in Tables 21 and 22 of Prices and Price Indexes (62-002). This index is found in Table 20 of Prices and Price Indexes (62-002). Full trade detail, by city, is published quarterly in the Construction Price Statistics Service Bulletin, (62-006).

Rates utilized in index calculations are derived mainly from the Construction Collective Agreement Survey Service provided by the Canadian Construction Association. These rates are supplemented as necessary by surveys of some union locals. While indexes containing supplementary benefits will be available soon, presently published indexes relate to basic union wage rates only. The rates indicate the rate of straight time compensation for one hour in the city specified. Rates converted into the form of ratios were combined into weighted average city indexes utilizing 1961 Census of Population data on numbers of people employed by trade and average earnings in the construction industry.

The base-weighted indexes provide an estimate of the impact of rate change on basic union wages for the major construction trades employed in a given city. Because union workers in cities tend to be engaged mainly in non-residential or commercial building construction and because rates for trades associated with engineering work were excluded from the price sample the indexes best approximate wage rate change for non-residential construction.

Highway Construction Price Indexes (1961=100)(3)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the previously published indexes to a 1956=100 time base. Users are warned that an

(2) Industry Selling Price Indexes 1956-1968 Cat. 62-528.

(3) The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

Au cours de la période 1926-1966, un échantillon spécial d'enquêtés a donné les prix pour l'indice. En 1961, on a remplacé cet échantillon par les prix tirés du système I.P.V.I. Ces prix sont publiés par mois dans le Tableau 2 du présent bulletin.

La série consacrée au taux de rémunération dans l'industrie du bâtiment est basée sur les chiffres fournis par la Direction des normes du travail du ministère du Travail; elle a trait au salaire minimum versé aux termes de marchés signés avec le gouvernement pour des travaux de construction dans divers corps de métiers et dans diverses villes.

Nous rappelons aux utilisateurs que les indices ont été recalculés sur la base 1961=100 et qu'ils n'obtiendront pas l'indice synthétique fourni en combinant les éléments et les pondérations donnés. Les utilisateurs qui sont à même de fournir leur propre pondération pour les éléments peuvent procéder à leur propre combinaison adaptée à leurs besoins spécifiques.

Indices du salaire syndical de base dans les principaux corps de métiers

Les indices du salaire syndical de base portent sur les 12 principaux métiers de la construction dans 14 grandes villes canadiennes. On calcule les indices pondérés moyens pour chaque ville de même que l'indice synthétique des 14 villes. Les indices sont publiés chaque trimestre dans les Tableaux 21 et 22 de la publication Prix et indices des prix (numéro de catalogue 62-002). (...) On peut trouver cet indice dans le tableau 00 de la publication Prix et indices des prix (no 62-002). Des données détaillées sur tous les métiers de la construction dans chaque ville sont publiés chaque trimestre dans le bulletin de service Statistique des prix dans la construction (numéro de catalogue 62-006).

Les taux utilisés dans le calcul des indices proviennent principalement de la publication Construction Collective Agreement Survey Service de l'Association canadienne de la construction. Des enquêtes auprès de certaines succursales de syndicats ont été menées lorsqu'il fallait disposer de taux supplémentaires. On publiera sous peu des indices contenant les avantages supplémentaires, mais les indices actuels portent uniquement sur le salaire syndical de base. Les taux correspondent à la rémunération normale pour une heure dans la ville question. Les taux convertis en ratios ont été transformés en indices pondérés moyens des villes à partir des données tirées du recensement de la population de 1961 sur les effectifs de chaque métier et les gains moyens dans l'industrie de la construction.

Les indices pondérés permettent d'évaluer l'influence de la variation du taux des salaires syndicaux pour les principaux métiers de la construction dans une ville donnée. Étant donné que les travailleurs syndiqués dans les villes s'occupent surtout de la construction non résidentielle, ou commerciale et que les taux des métiers relevant du génie civil n'ont pas été inclus dans l'échantillon des prix, les indices constituent la meilleure approximation des variations dans les taux de salaire dans la construction non résidentielle.

Indices des prix de la construction routière (1961=100)(3)

Les indices des prix de la construction routière au Canada représentent les prix payés chaque année par les administrations provinciales au titre des marchés de construction routière, en pourcentages des sommes payées en 1961. La conversion des indices à la base 1961=100 ne modifie pas leur évolution en pourcentages comparativement aux indices publiés précédemment et dont la base était 1956=100. Les utilisateurs ne doivent pas s'attendre à ce que le groupement des indices

(2) Indices des prix de vente dans l'industrie, 1956-1968, Cat. 62-528 au catalogue.

(3) Il s'agit d'exercices financiers. 1968 représente donc la période du 1er avril 1968 au 31 mars 1969.

aggregation of the converted major group indexes with the published weights will not yield the published 1961=100 all items indexes. The conversion does not create this problem for a user wishing to reweight the converted major group indexes using weights appropriate to his own purpose.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by specified provincial governments during the weight-base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956 are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problem of estimating price change for highway construction see pages vi & vii of the December 1967 issue of Prices and Price Indexes, Catalogue 62-002 and pages 9 & 10 of the reference paper Price Indexes of Highway Construction in Catalogue 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or updating previously costed roadwork, in estimating replacement cost of previously completed roadwork, and as historical measurements of price trends in highway construction.

The indexes do not necessarily reflect the price movements of non-contract construction or maintenance work. The indexes are designed to measure price changes for a fixed programme of highway construction, in each of the seven provinces. Because price levels in the time base-period (1961) varied from province to province the indexes cannot be used to compare price differences between provinces, but only to compare differences in the rate at which prices are changing in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction price indexes but rather for units of construction work put in place such as an acre of clearing, a cubic yard of earth excavation or a ton of bituminous hot-mix paving. In addition, the index contains prices of some materials, such as culvert pipe, usually supplied to the contractor by the highway departments. Prices of highway construction work are annual weighted averages of bid prices of units of construction in groups of contracts awarded, classified by price-determining characteristics of the contracts and the bid items such as volume of the bid item, type of contract and geographic location. Prices of material items of supply are prices paid by government departments to suppliers.

Price Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and equipping electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction technology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

convertis des grands groupes et des pondérations publiées donne l'indice général publié (1961=100). Cette conversion ne pose aucun problème à l'utilisateur qui désire réviser la pondération des indices convertis des grands groupes en utilisant les poids adaptés à ses fins propres.

Les indices pondérés en fonction de la base sont publiés chaque année; ils mesurent, pour la période allant de 1956 à 1968, l'influence de l'évolution des prix sur le coût des programmes spécifiques de construction de routes au Canada représenté par les marchés de construction de routes d'environ \$50,000 ou plus accordés par certaines administrations provinciales au cours de la période visée par la base de pondération. Les poids des éléments des indices qui représentent l'importance relative des unités de construction en 1956 sont constants. Seules les estimations de prix varient d'une année à l'autre; les indices mesurent donc l'évolution des prix dans le temps. Pour plus de détails sur l'estimation de l'évolution des prix pour la construction routière, se reporter aux pages vi et vii du numéro de décembre de Prices and Price Indexes (n° 62-002 au catalogue de Statistique Canada) et aux pages 9 et 10 du bulletin intitulé Price Indexes of Highway Construction in Canada (n° 62-520 au catalogue de Statistique Canada). L'indice général ou ses éléments servent à la planification et à la budgétisation des programmes de construction routière, à indexer ou à mettre à jour les prix de travaux de routes effectués précédemment, à estimer le coût de remplacement des travaux routiers achevés précédemment et à mesurer chronologiquement l'évolution des prix de la construction routière.

Les indices ne reflètent pas nécessairement l'évolution des prix de la construction effectués hors marché ou des travaux d'entretien; ils servent à mesurer les variations de prix pour un programme déterminé de construction routière dans chacune des sept provinces. Au cours de la période qui a servi de base (1961), les niveaux de prix ont varié d'une province à l'autre; aussi, on ne peut utiliser les indices pour comparer des différences de prix entre les provinces mais on peut seulement les employer pour comparer les différences entre taux de variation des prix dans les provinces.

Les prix compris dans l'indice ne se rapportent pas aux unités de travail ni de matériaux comme c'est habituellement le cas dans l'indice des prix de la construction; ils se rapportent plutôt aux unités de travail de construction effectué, comme le défrichement d'une acre de terrain, l'excavation d'une verge cube ou l'épandage à chaud d'une tonne de béton bitumineux. En outre, l'indice comprend le prix de certains matériaux, par exemple, les tuyaux de ponceau fournis habituellement à l'entrepreneur par les ministères de la Voirie. Les prix des travaux de construction routière sont des moyennes pondérées des prix de soumission pour les unités de construction par groupe de marchés classés selon les caractéristiques des marchés qui déterminent le prix et les éléments d'offre tels que le volume de chaque poste, le type de marché et la situation géographique. Les prix des matériaux fournis sont les prix payés par les ministères aux fournisseurs.

Indices des prix à la construction dans les services d'électricité

En ce qui concerne les services d'électricité, l'indice a pour but de fournir une estimation des conséquences des variations de prix sur le coût des matériaux, de la main-d'oeuvre et du matériel utilisés dans la construction et l'équipement des services d'électricité au cours d'une période de référence donnée. L'indice sert à mesurer combien il faudrait payer en plus ou en moins pour réaliser un programme de construction identique à celui de la période de référence en utilisant les mêmes techniques de construction et en supposant que les taux de rentabilité et de productivité de la construction soient les mêmes pour les deux périodes.

As the market does not yield comparable selling prices for such unique transactions as, for example, the sale of a transmission line, it was not possible to produce an index of the prices of completed structures. Completed structure indexes would be appropriate for users wishing either to estimate reproduction costs or to deflate capital formation. For such uses the indexes introduced in this publication have specific shortcomings. Nonetheless, they may be helpful for such purposes provided the users understand the deficiencies. Thus the reader is asked to make particular note of Section III, of Occasional Paper Catalogue 62-526 Price Indexes of Electrical Utility Construction - The Necessity for Compromise and Section XI, (of the same paper) Uses and Limitations. In addition, because particular construction projects are unique, the aggregate indexes will not likely be appropriate to specific projects since they relate to an average mix of materials, labour and equipment derived from a variety of projects in a specific base period. Thus, if the component price indexes and their weights included in the aggregate index presented herein are inappropriate for a particular purpose the user should consider selecting appropriate component indexes from among those published herein. These indexes could then be combined into an aggregate index by utilizing weights derived from the projects or assets to be costed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials or equipment. The price reported is for units and terms of sale representative of the volume sales of the manufacturer. Where sales to electric utilities form a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and others directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial tax changes. Until December 1964 wage rate data were supplied by the Federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union basic wage rates reported by major utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban own account and contract electric utility construction. Some further improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Construction has been defined as new construction or major reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by major utilities, relating to own account and to contract construction erected during the last half of the 1950's. Weights were derived from these data which indicated the relative importance of the major inputs to the construction. The components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and expenditures for labour, e.g. - line-men and groundmen. Costs relating to construction equipment such as trucks, and components of equipment operating costs such as tires, gasoline and repairs were also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land and rights-of-way have been excluded.

Comme il est impossible d'obtenir directement sur le marché des prix de vente comparables pour des opérations de caractère aussi unique, par exemple, que la vente d'une ligne de transport d'énergie, Statistique Canada n'a pu établir un indice du prix des installations en place. Un tel indice ne serait utile que si l'on désirait obtenir une estimation des sommes qu'il faudrait engager pour réaliser à nouveau un programme de construction identique ou encore pour dégonfler une formation de capital. Les indices publiés ici présentent en ce sens certaines lacunes. Ils peuvent néanmoins servir à de telles fins pourvu que les utilisateurs en comprennent les limites. Les lecteurs peuvent se rapporter aux Sections III et XI de la publication Price Indexes of Electrical Utility Construction (Statistique Canada, 62-526): "The Necessity for Compromise" et "Uses and Limitations". De plus, en raison du caractère unique de chaque projet de construction, l'indice synthétique ne pourra sans doute pas s'appliquer à un projet bien précis car il porte justement sur une moyenne des matériaux, de la main-d'oeuvre et du matériel utilisés dans la réalisation de plusieurs projets au cours d'une période de référence donnée. Ainsi, si les indices détaillés et les poids correspondants qui composent les indices synthétiques présent ici ne conviennent pas à un usage bien précis, l'utilisateur pourra toujours se servir des autres indices détaillés et construire, à l'aide des coefficients de pondération, les indices de son choix, soit pour évaluer le coût d'un projet, soit pour établir des facteurs de dégonflement.

La plupart des prix des matériaux et du matériel utilisés pour établir les indices sont les prix de vente déclarés mensuellement par les fabricants. Ces prix sont représentatifs des unités de mesure et des conditions de vente valables pour les ventes en grande quantité des fabricants. Lorsque les ventes aux services électriques ne représentent qu'un faible pourcentage du chiffre d'affaire d'un fabricant, il est possible que le prix déclaré ne représente pas de façon satisfaisante le prix consenti aux entreprises en construction et aux autres industries s'occupant directement de construction et d'installation de services d'électricité. Dans ces cas, on a inclus dans l'indice les prix facturés aux autres fabricants ou grossistes. On a tenu compte, dans l'établissement de l'indice, des variations de la taxe de vente fédérale; toutefois, il n'a été fait aucun redressement pour les variations de taxe provinciale. Jusqu'en décembre 1964, les données sur les taux de rémunération étaient fournies par le ministère fédéral du Travail et représentaient le salaire horaire minimum versé aux personnes travaillant au titre d'un marché accordé par le gouvernement fédéral dans certaines grandes villes. En 1965, on fit entrer dans l'indice le salaire de base exigé par les syndicats et déclaré par les principaux services et par certains entrepreneurs. L'échantillon choisi représente donc une estimation des variations du taux de rémunération dans la construction en ville de services électriques pour compte propre ou au titre d'un marché. Certaines améliorations à l'indice sont prévues de façon à l'étendre aux personnes non syndiquées travaillant dans les régions rurales à la construction de lignes de transport d'énergie.

Le terme "construction" a été défini comme étant la construction neuve ou la réparation de réseaux de distribution, lignes de transport d'énergie, de postes de transformation ou de postes de manœuvre. L'entretien et les frais d'exploitation ne sont pas compris. Les données sur les prix de revient sont fournies par les principaux services d'électricité et portent sur la construction exécutée pour compte propre ou au titre d'un marché au cours de la deuxième moitié des années cinquante. Les poids tirés de ces données représentent l'importance relative des principaux éléments entrant dans la construction. Les composantes du coût de la distribution et du transport comprennent certains éléments comme les poteaux, la quincaillerie, les conducteurs, les isolateurs, les compteurs, les transformateurs de distribution et les dépenses en main-d'œuvre (monteurs, personnel de service, etc.). Les dépenses entraînées par le matériel de construction (camions et pièces d'équipement) et les frais d'exploitation (pneus, essence et réparations) sont également inclus. Les postes de transformation et les postes de manœuvre comprennent certains des éléments ci-dessus; les frais les plus importants sont cependant entraînés par les transformateurs et les appareils de connexion. Les dépenses foncières et les droits de passage ont été exclus.

The term Canadian electric utility has been defined to include municipal as well as nonmunicipal utilities but the majority of the cost data tabulated was derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

Price Indexes of Hydro-electric Generating Stations

The following additional points may be of assistance to users of the hydro-electric generating stations index which was described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

- (a) Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.
- (b) Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.
- (c) Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.
- (d) Weighting patterns exclude expenditure for ancillary facilities for logging and navigation, permanent houses, etc.

Price Indexes of Machinery & Equipment

In response to the need of users wishing either correct expenditure data of machinery and equipment or price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968=100 and most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

Conceptually purchasers' prices should be utilized in such indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and federal sales tax.

Foreign prices utilized in the index are either from the Bureau of Labour Statistics commodity indexes or from Division collections from manufacturers most of whom reside in the United States.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim

Par définition, l'expression "service d'électricité canadien" englobe aussi bien les services municipaux que les autres; toutefois, la majeure partie des données de coût ont été tirées des déclarations des services non municipaux. Les fabricants qui produisent de l'électricité destinée à l'auto-consommation et qui peuvent également vendre de l'électricité ont été exclus de cette enquête.

Indices de prix des centrales hydroélectriques

Les points supplémentaires ci-après peuvent aider les utilisateurs de l'indice des centrales hydroélectriques décrit en détail dans le bulletin hors-série de Statistique Canada portant le numéro 62-533.

- (a) Les données sur le taux de rémunération proviennent de diverses sources et surtout des enquêtes sur les accords syndicaux de l'Association canadienne de la construction et des études du Bureau de recherche sur les traitements portant sur la rémunération des travailleurs intellectuels, des techniciens et du personnel administratif. Pour le calcul de l'indice, on a utilisé les taux de rémunération de base, avantages sociaux non compris.
- (b) Au lieu du prix des entrées de main-d'oeuvre, de matériaux et de location de matériel pour la production de béton et des remblais effectués, on a utilisé le prix du béton préparé et celui de la terre et du gravier en place.
- (c) L'indice comprend les prix correspondant à certains postes de dépenses qui n'étaient pas repris auparavant dans les indices de prix des entrées dans la construction: intérêts pendant la construction, frais généraux, fourniture et entretien de barraquements temporaires.
- (d) Les facteurs de pondération ne comprennent pas les dépenses affectées aux installations auxiliaires pour l'exploitation forestière et la navigation, les maisons permanentes, etc.

Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968=100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente des fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du U.S. Bureau of Labour Statistics ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre, à mesure qu'ils seront disponibles. En

preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de prix des marchandises, compte tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.

NOTES ON PRICES AND PRICE INDEX NUMBERS

Industry Selling Price Index: Manufacturing (1961=100)

The industry selling price index (Total Manufacturing) moved 0.9 % higher in December to 130.8 from the November index of 129.6. It was 6.2 % higher than the December 1971 index of 123.2. Of the 101 industry indexes included in the Total, 54 were higher, 8 declined and 39 were unchanged.

In terms of the relative contribution to the overall change in the total manufacturing index the more notable changes were increases recorded in the foods and beverages group, particularly in the feed manufacturers, vegetables oil mills and slaughtering and meat packing industries. Increases also occurred in the primary metals group reflecting higher prices registered in the smelting and refining, and iron and steel mills industries. Price increases recorded for automobiles were mainly responsible for advances in the transportation equipment industries group. Decreases during the month were insignificant with the exception of the leather products group, where lower prices reported in the leather tanneries industry marked the first decline in that major group since mid 1971.

NOTES SUR LES PRIX ET LES INDICES DE PRIX

Prix de vente dans l'industrie: industries manufacturières (1961=100)

L'indice des prix de vente dans l'industrie (toutes industries manufacturières) a augmenté de 0.9 % en décembre pour s'établir à 130.8 contre 129.6 en novembre. Il était de 6.2 % plus élevé que celui de décembre 1971 (123.2). Sur les 101 indices des prix industriels qui composent le total, 54 ont augmenté, 8 ont baissé et 39 sont demeurés inchangés.

Pour ce qui est de l'apport de chacune des industries à l'indice total de l'activité manufacturière, les changements les plus appréciables sont les progressions constatées dans le groupe des aliments et boissons, surtout dans la fabrication des aliments pour animaux et des huiles végétales, ainsi que dans les abattoirs et usines de conditionnement de la viande. Des augmentations ont aussi été enregistrées dans le groupe de la première transformation des métaux par suite de la hausse des prix dans l'industrie de la fonte et de l'affinage d'une part et dans l'industrie du fer et de l'acier d'autre part. L'augmentation du prix des automobiles est surtout attribuable à la hausse observée dans le groupe du matériel de transport. Les diminutions au cours du mois ont été négligeables sauf dans le groupe des produits du cuir où il y a eu baisse de prix dans les tanneries; il s'agissait de la première régression dans ce groupe principal depuis le milieu de 1971.

General Wholesale Index (1935-39=100)

The general wholesale price index rose 1.7 % in December to 327.9 from the November index of 322.4. It was 11.0 % higher than the December 1971 index of 295.5. All eight major group indexes were higher.

The vegetable products group index rose 5.1 % in December to 280.7 from 267.0 on higher prices for grains, sugar and its products, bakery products, fresh fruits, rubber and its products and vegetable oils. An advance of 1.7 % to 392.2 from 385.8 in the animal products group index reflected price increases for live-stock, fishery products, fresh meats and eggs. Higher prices for copper and its products and silver were chiefly responsible for a rise of 1.3 % to 272.3 from 268.9 in the non-ferrous metals products group index. An advance of 0.7 % to 464.1 from 460.7 in the wood products group index reflected price increases for fir, cedar and hemlock. The iron products group index moved 0.6 % higher to 333.6 from 331.6 on higher prices for rolling mill products, and wire. An increase of 0.5 % to 247.9 from 246.7 occurred in the chemical products group index on higher prices for fertilizer materials and paint materials. Fractionally higher price movements were recorded in the textile products group to 283.0 from 281.9 and in the non-metallic minerals group to 235.1 from 235.0.

The following table lists the Total Index and component groupings for specified dates:

Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros a progressé de 1.7 % en décembre pour atteindre 327.9, contre 322.4 en novembre. Il était de 11.0 % supérieur à décembre 1971 (295.5). Les huit indices des groupes activité ont tous augmenté.

L'indice des produits d'origine végétale s'est accru de 5.1 % en décembre, passant de 267.0 à 280.7, par suite de l'augmentation du prix des céréales, du sucre et de ses dérivés, des produits de boulangerie, des fruits frais, du caoutchouc et de ses dérivés et des huiles végétales. La progression de 1.7 % de l'indice des produits d'origine animale, qui passe ainsi de 385.8 à 392.2, est attribuable à l'augmentation des prix du bétail, des produits de la pêche, de la viande fraîche et des oeufs. La hausse de prix du cuivre et de ses dérivés ainsi que de l'argent est surtout attribuable à l'augmentation de 1.3 % de l'indice des produits métalliques non ferreux (de 268.9 à 272.3). L'augmentation de 0.7 % (de 460.7 à 464.1) de l'indice des produits du bois est attribuable à la hausse des prix du sapin, du thuya et de la pruche. L'indice des produits du fer a progressé de 0.6 %, passant de 331.6 à 333.6, par suite de la hausse du prix des produits laminés et du fil métallique. L'indice du groupe des produits chimiques a avancé de 0.5 % (de 246.7 à 247.9), en raison de l'augmentation du prix des engrais et de la peinture. De faibles avances ont été enregistrées dans l'indice du groupe des produits textiles (de 281.9 à 283.0) et dans l'indice des produits minéraux non métalliques (de 235.0 à 235.1).

Le tableau ci-dessous présente les variations les plus importantes:

	Dec. 1972	Nov. 1972	Dec. 1971	Nov. 1971	% Change — Changement proportionnel %	
					Dec./72 Nov./72	Dec./72 Dec./71
General Wholesale Index — Indice général de gros	327.9	322.4	295.5	293.7	+ 1.7	+ 11.0
Vegetable products — Produits d'origine végétale	280.7	267.0	236.5	232.9	+ 5.1	+ 18.7
Animal products — Produits d'origine animale	392.2	385.8	341.1	336.0	+ 1.7	+ 15.0
Textile products — Matières textiles	283.0	281.9	266.6	265.1	+ 0.4	+ 6.2
Wood products — Produits du bois	464.1	460.7	410.8	410.6	+ 0.7	+ 13.0
Iron products — Produits du fer	333.6	331.6	320.5	319.5	+ 0.6	+ 4.1
Non-ferrous metals — Métaux non ferreux	272.3	268.9	255.2	257.7	+ 1.3	+ 6.7
Non-metallic minerals — Minéraux non métalliques	235.1	235.0	227.6	227.4	-	+ 3.3
Chemical products — Produits chimiques	247.9	246.7	240.4	239.1	+ 0.5	+ 3.1
Iron and non-ferrous metals (excluding gold) — Fer et métaux non ferreux (sauf l'or)	361.9	358.8	344.8	345.9	+ 0.9	+ 5.0
Raw and partly manufactured goods — Matières premières et demi-produits	298.0	288.0	255.5	253.5	+ 3.5	+ 16.6
Fully and chiefly manufactured goods — Produits finis ou presque finis	344.8	341.8	318.0	316.4	+ 0.9	+ 8.4

Note: Indexes for the current year are subject to revision. — Nota: Les indices pour l'année courante sont sujets à révision.

Thirty Industrial Materials Price Index (1935-39=100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, moved up 1.9 % to 325.4 in December from the November index of 319.4. Prices were higher for twelve commodities, lower for four and unchanged for fourteen. Principal changes included increases for raw sugar, wheat, raw rubber, oats, hogs, steers, sisal, copper, fir timber, iron ore and bleached sulphite pulp while decreases were recorded for spruce lumber, linseed oil and beef hides.

Canadian Farm Products Price Index (1935-39=100)

The price index of Canadian farm products at terminal markets advanced 2.8 % to 313.1 in December from the November index of 304.7. An increase of 3.2 % to 418.7 from 405.6 in the animal products index reflected higher prices for eggs, hogs, steers and calves on both Eastern and Western markets, and for lambs in the East. Lower prices were shown for raw wool and lambs in the West. The field products index rose 1.9 % to 207.6 from 203.8 on higher prices for rye and potatoes on the Eastern and Western markets, for corn, oats and barley in the East and for flax in the West.

Farm Input Price Indexes (1961=100)

The Farm Input Price Index for Canada rose 1.7 % in the 4th quarter of 1972 moving to 143.9 from 141.5. This was 5.7 % higher than the 4th quarter 1971 index. The Eastern index increased 1.9 % to 144.6 from 141.9, while the Western index moved up 1.3 % to 143.0 from 141.1. The yearly increases for the regional indexes were 6.2 % and 4.8 % respectively. Higher prices for livestock feed in both regions had the most upward effect on the indexes. Also contributing were price increases for hired labour, building replacement and repairs, feeder cattle, and small tools and supplies.

Security Price Indexes (1961=100)

The investors index of common stock prices moved up 4.5 % over November to 189.2. Within the three major groups, industrials, utilities and finance rose 5.1 % to 198.0, 2.9 % to 154.9, and 3.6 % to 196.2 respectively. Amongst the thirteen industrial sub-groups, increases were registered in eleven of them; the largest increase was 9.2 % to 363.8 in the petroleum sub-group; losses were registered in foods and construction. In utilities, all sub-group rose but one, pipelines which eased 0.2 % to 181.6. An increase in the finance index resulted from a gain in both sub-groups: banks rose 3.3 % to 224.4, investment and loans moving up 4.4 % to 154.7.

In the same period, the index of mining stock prices moved down 0.1 % to 104.4 with golds increasing 0.5 % to 110.7 and base metals easing 0.6 % to 101.8.

Of the two supplementary price indexes, uraniums went down 1.1 % to 162.0 while primary oils and gas gained 3.0 % to 559.4.

The preferred stock index rose 1.7 % to 72.2.

Indices des prix de trente produits industriels (1935-1939=100)

L'indice des prix de trente produits industriels, calculé sous forme de moyenne géométrique non pondérée, a augmenté de 1.9 %, passant de 319.4 en novembre à 325.4 en décembre. Les prix de douze produits ont augmenté, ceux de quatre ont diminué et ceux de quatorze sont restés inchangés. Les principaux changements comprennent une augmentation des prix du sucre brut, du blé, du caoutchouc brut, de l'avoine, des porcs des bouvillons, du sisal, du cuivre, du bois d'oeuvre de sapin, du minerai de fer et de la pâte blanchie au sulfite; par contre, on a enregistré une diminution du prix du bois de charpente en épinette, de l'huile de lin et des peaux de boeuf.

Indice des prix des produits agricoles canadiens (1935-1939=100)

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a progressé de 2.8 %, passant de 304.7 en novembre à 313.1 en décembre. La hausse de 3.2 % de l'indice des produits d'origine animale, qui passe ainsi de 405.6 à 418.7, est imputable à l'augmentation des prix des oeufs, des porcs, des bouvillons et des veaux sur les marchés de l'Est et de l'Ouest et de ceux des agneaux sur les marchés de l'Est. Une diminution des prix de la laine brute et de l'agneau a été enregistrée dans l'Ouest. L'indice de prix des grandes cultures a progressé de 1.9 %, passant de 203.8 à 207.6, par suite de la hausse des prix du seigle et des pommes de terre sur les marchés de l'Est et de l'Ouest, du maïs, de l'avoine et de l'orge dans l'Est et du lin dans l'Ouest.

Indices de prix des entrées dans l'agriculture (1961=100)

L'indice de prix des entrées dans l'agriculture au Canada a augmenté de 1.7 % au cours du 4^e trimestre de 1972, passant de 141.5 à 143.9, ce qui représente une hausse de 5.7 % par rapport au 4^e trimestre de 1971. L'indice de l'Est a progressé de 1.9 % (de 141.9 à 144.6); l'indice de l'Ouest a avancé de 1.3 % (de 141.1 à 143.0). L'augmentation annuelle des indices régionaux était respectivement de 6.2 % et 4.8 %. Cette hausse des indices est surtout attribuable à l'augmentation du prix des aliments pour bétail dans les deux régions. La hausse du coût de la main-d'oeuvre, du remplacement et de la réparation des bâtiments, des bovins d'engraissement, des petits outils et fournitures a aussi eu des effets sur le mouvement des prix.

Indices des cours des valeurs mobilières (1961=100)

L'indice des cours de placement des actions ordinaires a avancé de 4.5 % entre novembre et décembre pour s'établir à 189.2. Les indices des trois principaux groupes ont augmenté: celui des valeurs industrielles (198.0) a progressé de 5.1 %, celui des services d'utilité publique (154.9) de 2.9 % et celui des finances (196.2) de 3.6 %. Parmi les treize sous-groupes des valeurs industrielles, onze indices ont enregistré des augmentations, la plus forte étant de 9.2 % dans le sous-groupe du pétrole (363.8); des diminutions ont été observées dans les aliments et la construction. Dans le cas des services d'utilité publique, tous les sous-groupes ont connu des augmentations, sauf un, les pipe-lines qui ont diminué de 0.2 % pour s'établir à 181.6. L'augmentation de l'indice des finances est attribuable à un gain dans les deux sous-groupes: les banques ont augmenté de 3.3 % pour atteindre 224.4, les placements et prêts ont progressé de 4.4 % pour se fixer à 154.7.

Au cours de la même période, l'indice du cours des titres miniers a diminué de 0.1 % pour s'établir à 104.4; l'or a augmenté de 0.5 % pour atteindre 110.7 et les métaux communs ont diminué de 0.6 % pour se fixer à 101.8.

Dans le cas des deux autres indices, l'uranium a descendu de 1.1 % pour s'établir à 162.0, et le pétrole et le gaz primaires se sont accrus de 3.0 % pour atteindre 559.4.

L'indice des actions privilégiées a augmenté de 1.7 % pour atteindre 72.2.

Consumer Price Movements

The Consumer Price Index for Canada (1961=100) rose 0.7 % to 143.3 in December from 142.3 in November. This latest increase was identical to that which occurred between these two months last year but exceeded the November to December advances of other recent years. Food prices rose 1.4 %, while the level of prices for all items other than food increased 0.4 % mainly as a result of advances of 0.5 % and 1.3 % in the Housing and in the Tobacco and Alcohol components, respectively. The Transportation index rose 0.2 % and the Clothing, the Health and Personal Care and the Recreation and Reading components edged up 0.1 %. Between December 1971 and December 1972, the All-Items Index registered a 5.1 % advance.

The Food index rose 1.4 % to 147.1 in December from 145.1 in November. This latest advance, though smaller than that which occurred between these two months last year, exceeded all other November to December increases of recent years. In the latest month, restaurant meal prices rose 0.9 %, reflecting increases in many cities across the country. The price level of food consumed at home advanced 1.4 % mainly in response to higher vegetable, fruit, beef and egg prices, although all other major foods, except pork, also registered increases. Vegetable prices, which usually increase at this time of year, rose on average 8.6 % as higher quotations were recorded for 11 fresh and frozen items and for most canned varieties. Fruit prices moved up 1.8 % as advances for some fresh, canned and frozen items were partly offset by declines for others. Over the twelve month period ending December 1971, the fruit index increased nearly 9 % whereas vegetable prices rose, on average, 1.2 %. In the latest month, the meat, fish and poultry index advanced 0.9 %. Beef prices rose 2.1 % and higher chicken and turkey quotations advanced the poultry index 0.6 %. In contrast, the average price of pork, which has risen almost 27 % in the past twelve months, declined 1.1 % between November and December, thereby registering its first downward movement in over a year. Since December 1971, the meat, fish and poultry index increased over 14 %. Between November and December, egg prices rose 11.2 % to stand almost 16 % above their level of a year previous. The bakery and cereal products index advanced 1.2 % mainly as the result of higher bread prices in a number of Ontario cities, although other items such as corn flakes and biscuits also registered increases. Price advances were recorded for some dairy products including ice cream and evaporated milk. Powdered skim milk, however, fell in price as specials took effect in Montreal, Toronto and Vancouver. Among other foodstuffs, decreases were recorded for ground coffee, peanut butter, catsup, sugar and infants' food, but soft drinks, honey, jam, tea and instant coffee were among the items registering increases. Since December 1971, honey and sugar prices have risen more than 41 % and 24 %, respectively. The Food index advanced 8.6 % above its level of twelve months previous with the price of food consumed at home increasing 8.8 % and that for restaurant meals 7.0 %.

The Housing index advanced 0.5 % to 146.8 in December from 146.1 in November as a result of a 0.7 % increase in the shelter component which was chiefly attributable to a 1.1 % increase in the homeownership component. In contrast, rents rose 0.2 %. No change was recorded in the household operation component. The furniture index dipped 0.2 % as scattered price reductions for bedroom suites and kitchen sets outweighed increases for living room and dinette suites.

Mouvements des prix à la consommation

L'indice des prix à la consommation pour le Canada (1961=100) est monté de 0.7 % et est passé de 142.3 en novembre à 143.3 en décembre. Cet accroissement est identique à celui enregistré entre ces deux mois l'année dernière mais il est supérieur aux augmentations enregistrées de novembre à décembre au cours des années immédiatement antérieures. Le prix des aliments a augmenté de 1.4 %, alors que le niveau des prix de tous les éléments autres que les aliments a progressé de 0.4 % en raison surtout des avances de 0.5 % pour l'élément habitation et de 1.3 % pour l'élément tabacs et alcools. L'indice des transports a progressé de 0.2 %; les éléments habillement, soins personnels et de santé, ainsi que lecture et loisirs ont progressé de 0.1 %. De décembre 1971 à décembre 1972, l'indice général a enregistré une avance de 5.1 %.

L'indice de l'alimentation s'est accru de 1.4 % pour passer de 145.1 en novembre à 147.1 en décembre. Cette augmentation, bien qu'inférieure à celle enregistrée entre ces deux mois l'année dernière, a dépassé les hausses enregistrées entre ces deux mois ces dernières années. Le mois dernier, le prix des repas consommés dans les restaurants a été majoré de 0.9 %, conséquence d'une hausse des prix dans un grand nombre de villes au pays. Le niveau des prix des aliments consommés à la maison a progressé de 1.4 % en raison surtout d'une hausse des prix des légumes, des fruits, du bœuf et des œufs; tous les autres aliments principaux à l'exception du porc ont également subi des hausses de prix. Les légumes, dont les prix augmentent ordinairement en cette période-ci de l'année, ont connu une hausse moyenne de 8.6 % par suite d'une augmentation des prix des produits frais et congelés et de la plupart des produits en conserve. Le prix des fruits a été majoré de 1.8 %, l'augmentation sur certains produits frais, en conserve ou congelés étant en partie compensée par une réduction sur d'autres produits. Au cours de la période de douze mois suivant décembre 1971, l'indice des fruits a progressé de près de 9 % tandis que le prix des légumes a augmenté en moyenne de 4 %. Le mois dernier, l'indice de la viande, du poisson et de la volaille a progressé de 0.9 %. Le prix du bœuf a augmenté de 2.1 % et les hausses de prix du poulet et de la dinde ont fait monter de 0.6 % l'indice de la volaille. Par contre, le prix moyen du porc qui a augmenté de presque 27 % au cours des douze derniers mois, a diminué de 1.1 % de novembre à décembre; il s'agit là de la première régression enregistrée depuis plus d'un an. Depuis décembre 1971, l'indice de la viande, du poisson et de la volaille s'est accru de plus de 14 %. De novembre à décembre, le prix des œufs a été majoré de 11.2 % pour s'établir à presque 16 % au-dessus de ce qu'il était un an plus tôt. L'indice des produits de boulangerie et des céréales a progressé de 1.2 % en raison surtout de la hausse du prix du pain dans certaines villes de l'Ontario, bien que d'autres produits tels que les flocons de maïs et les biscuits ont aussi enregistré des hausses. L'augmentation des prix a frappé certains produits laitiers dont la crème glacée et le lait évaporé. Toutefois, le lait écrémé en poudre a diminué de prix en raison des soldes qui ont eu lieu à Montréal, Toronto et Vancouver. Quant aux autres produits alimentaires, il y a eu diminution de prix dans le cas du café moulu, du beurre d'arachides, du ketchup, du sucre et des aliments pour bébés, tandis que certains autres produits dont les boissons gazeuses, le miel, la confiture, le thé et le café soluble ont augmenté de prix. Depuis décembre 1971, les prix du miel et du sucre ont augmenté respectivement de plus de 41 % et de 24 %. L'indice de l'alimentation était supérieur de 8.6 % à ce qu'il était douze mois plus tôt en raison de la hausse de 8.8 % du prix des aliments consommés à la maison et de 7.0 % du prix des repas consommés dans les restaurants.

L'indice de l'habitation a avancé de 0.5 % pour passer de 146.1 en novembre à 146.8 en décembre. Cet accroissement est le résultat d'une hausse de 0.7 % de l'élément logement causée principalement par l'augmentation de 1.1 % des frais de propriété. Par contre, les loyers ont subi une hausse de 0.2 %. Aucune variation n'a été signalée dans le cas de l'élément entretien de l'habitation. L'indice de l'ameublement a regagné de 0.2 %, diverses réductions de prix pour les mobiliers de chambre à coucher et de cuisine l'ayant emporté sur

Appliance prices, on average, were unchanged as lower quotations for electric stoves, vacuum cleaners and sewing machines outweighed increases for other items, including refrigerators. Higher prices for carpets and hard surface floor covering advanced the floor coverings index 1.0 %. The household textiles component remained unchanged as lower prices for curtains offset increases for woollen blankets and towels. Among other items, higher quotations were recorded for dishes, toilet paper and food-wrap, but prices of a number of cleaning supplies were lower due to sales. Between December 1971 and December 1972, the Housing index advanced 5.0 %.

The Clothing index rose 0.1 % to 135.1 in December from 134.9 in November. The clothing services component advanced 1.1 % as generally higher charges were registered for laundry, dry cleaning and shoe repairs. The women's wear index moved up 0.2 % as increased prices for hosiery, woollen dresses, sweaters and nightgowns outweighed the effect of some sales on pyjamas and winter coats. Footwear prices rose 0.3 % as scattered price increases for men's, women's and children's street shoes outweighed reductions, due to sales, for women's winter boots. On the other hand, decreases of 0.2 % and 0.7 %, respectively, were registered for the men's and children's wear indexes. Between December 1971 and December 1972, the Clothing index rose 3.1 %.

The Transportation index rose 0.2 % to 133.4 in December from 133.1 in November as a result of a 0.2 % increase in the automobile operation component together with a seasonal advance in the train fares index. The automobile operation rise was chiefly attributable to scattered price advances for new cars. In addition, however, there were widespread increases in chassis lubrication charges and some motor oil quotations were higher. On the other hand, gasoline prices declined in a number of cities, mainly in Quebec and Ontario, bringing the gasoline index 0.5 % below its level of twelve months earlier. Between December 1971 and December 1972, the Transportation index rose 1.4 %.

The Health and Personal Care index rose 0.1 % to 151.8 in December from 151.6 in November as higher prices for men's haircuts in Sault Ste. Marie, Vancouver and Victoria, and for toilet soap in a number of cities outweighed some reductions for razor blades, cleansing tissues and shaving cream. In the twelve months to December 1972, the Health and Personal Care index increased 3.9 %.

The Recreation and Reading index rose 0.1 % to 141.4 in December from 141.3 in November as a result of increases of 0.1 % and 0.2 % in the recreation and reading components, respectively. The former rose because higher prices in a number of cities for stereo combinations and toys more than offset small decreases for television sets, and the reading index advanced in response to a rise in magazine prices. In December 1972, the Recreation and Reading index stood 3.7 % above its level of a year previous.

The Tobacco and Alcohol index advanced 1.3 % to 134.7 in December from 133.0 in November mainly as a result of widespread increases in cigarette prices. There were also scattered rises in cigarette tobacco prices, and some liquor quotations were higher in Nova Scotia, New Brunswick and British Columbia. Between December 1971 and December 1972, the Tobacco and Alcohol index increased 3.9 %.

certaines hausses de prix pour les mobiliers de salle de séjour et de cuisinette. Le prix des appareils ménagers n'a en général pas varié parce que la baisse du prix des cuisinières électriques, des aspirateurs et des machines à coudre a été plus forte que les augmentations enregistrées sur d'autres articles, dont les réfrigérateurs. La hausse des prix des tapis et des couvre-parquets à surface dure a fait monter de 1.0 % l'indice des couvre-parquets. L'élément textiles ménagers est demeuré stationnaire, la baisse du prix des rideaux compensant l'augmentation du prix des couvertures de laine et des serviettes. Quant aux autres articles, le prix a augmenté dans le cas de la vaisselle, du papier hygiénique et du papier d'emballage des aliments, mais les prix de certaines fournitures d'entretien ont diminué par suite des soldes. De décembre 1971 à décembre 1972, l'indice de l'habitation a progressé de 5.0 %.

L'indice de l'habillement a progressé de 0.1 % pour atteindre 135.1 en décembre contre 134.9 en novembre. L'élément services d'habillement a augmenté de 1.1 % car de manières générales, les frais de buanderie, de nettoyage à sec et de réparations de chaussures ont augmenté. L'indice des vêtements pour femmes s'est accru de 0.2 %, les hausses de prix sur les bas, les robes de laine, les chandails et les vêtements de nuit ayant plus que contrebalancé l'influence de certains soldes de pyjamas et de manteaux d'hiver. Le prix des chaussures a grimpé de 0.3 % car les diverses augmentations de prix sur les souliers de ville pour hommes, femmes et enfants ont plus que contrebalancé les diminutions (à cause des soldes) de prix des bottes d'hiver pour femmes. Par contre, des diminutions respectives de 0.2 % et de 0.7 % ont été enregistrées dans les indices des vêtements pour hommes et enfants. De décembre 1971 à décembre 1972, l'indice de l'habillement a augmenté de 3.1 %.

L'indice des transports s'est accru de 0.2 %, et est passé de 133.1 en novembre à 133.4 en décembre en raison d'une hausse de 0.2 % de l'élément frais d'automobile et de l'augmentation saisonnière de l'indice des billets de train. Les frais d'automobile ont augmenté surtout à cause de diverses hausses du prix des voitures neuves. Toutefois, il y a aussi eu des augmentations générales des frais de graissage et certaines augmentations du prix de l'huile à moteur. Par contre, les prix de l'essence ont diminué dans certaines villes, surtout au Québec et en Ontario, abaissant l'indice de l'essence de 0.5 % par rapport à douze mois plus tôt. De décembre 1971 à décembre 1972, l'indice des transports a progressé de 1.4 %.

L'indice des soins personnels et de santé a augmenté de 0.1 % pour totaliser 151.8 en décembre contre 151.6 en novembre car les augmentations de prix dans les salons de coiffure pour hommes à Sault Sainte-Marie, Vancouver et Victoria et la hausse du prix du savon de toilette dans certaines villes ont plus que contrebalancé certaines soldes de lames de rasoir, de papiers de démaquillage et de crème à raser. Au cours des douze derniers mois jusqu'à décembre 1972, l'indice des soins personnels et de santé a progressé de 3.9 %.

L'indice des loisirs et de la lecture s'est élevé de 0.1 % atteignant 141.4 en décembre comparativement à 141.3 en novembre par suite des augmentations respectives de 0.1 % et 0.2 % des éléments loisirs et lecture. Dans le premier cas, l'accroissement est dû au fait que les hausses de prix dans certaines villes pour les chaînes stéréophoniques et les jouets ont plus que contrebalancé de légères diminutions pour les téléviseurs; dans le second cas (indice de la lecture), l'augmentation provient de la hausse du prix des revues. En décembre 1972, l'indice des loisirs et de la lecture était supérieur de 3.7 % au niveau de l'année précédente.

L'indice des tabacs et alcools a progressé de 1.3 % pour se chiffrer à 134.7 en décembre contre 133.0 en novembre surtout à cause des hausses généralisées du prix des cigarettes. Il y a eu aussi diverses augmentations du prix du tabac à cigarettes; le prix de certains spiritueux a été majoré en Nouvelle-Écosse, au Nouveau-Brunswick et en Colombie-Britannique. De décembre 1971 à décembre 1972, l'indice des tabacs et alcools a augmenté de 3.9 %.

Consumer price index items, when classified by commodities and services, offer another view of the incidence of the change in prices. In the latest month, the services index rose 0.5 % mainly because of higher charges for shelter services, automobile lubrication, dry cleaning, laundry and shoe repairs. The total commodities index advanced 0.8 % chiefly as a result of the 1.4 % increase in food prices. Prices of non-durable commodities other than food rose 0.3 % as increased quotations for tobacco, liquor, footwear, magazines, toys and motor oil outweighed reductions for textiles, household cleaning supplies and gasoline. A 0.2 % rise in durables' prices resulted from higher prices for new cars, floor coverings, and stereo combinations outweighing lower quotations for television sets and furniture. Between December 1971 and December 1972, the index for services advanced 5.6 % while that for commodities increased 4.9 %.

Les différentes composantes de l'indice des prix à la consommation, si on les classe par biens et services, présentent un autre aspect de la variation des prix. Au cours du mois dernier, l'indice des services a augmenté de 0.5 % surtout à cause de la hausse des frais des services de logement, du graissage des voitures, du nettoyage à sec, de la buanderie et des réparations de chaussures. L'indice de l'ensemble des biens a progressé de 0.8 % surtout à cause d'une augmentation de 1.4 % du prix des aliments. Les prix des biens non durables autres que les aliments ont progressé de 0.3 %, les hausses de prix sur le tabac, les spiritueux, les chaussures, les revues, les jouets et l'huile à moteur ayant plus que contrebalancé des réductions dans les textiles, les produits d'entretien ménager et l'essence. L'accroissement de 0.2 % des prix des biens durables provenait des hausses des prix des voitures neuves, des couvre-parquets et des chaînes stéréophoniques qui ont plus que contrebalancé les baisses de prix des téléviseurs et des meubles. De décembre 1971 à décembre 1972, l'indice des services a progressé de 5.6 % et celui des biens, de 4.9 %.

TABLE 1. Summary of Current Price Indexes
TABLEAU 1. Récapitulation des indices des prix courants

	Indexes — Indices				Percentage changes — Variation proportionnelle		
	December 1972 — Décembre	November 1972 — Novembre	December 1971 — Décembre	November 1971 — Novembre	Dec. 1972 Nov. 1972 — —	Dec. 1971 Nov. 1971 — —	Dec. 1972 Dec. 1971 — —

Industrial price indexes — Indices des prix dans l'industrie							
Industry selling price index: manufacturing — 1961=100(1) — Indices des prix de vente dans l'industrie: industries manufacturières:							
General wholesale index — (1935-39=100)(2) — L'indice général de gros	130.8	129.6	123.2	122.7	+ 0.9	+ 0.4	+ 6.2
Vegetable products — Substances végétales	327.9	322.4	295.5	293.7	+ 1.7	+ 0.6	+ 11.0
Animal products — Produits animaux	280.7	267.0	236.5	232.9	+ 5.1	+ 1.5	+ 18.7
Textile products — Produits textiles	392.2	385.8	341.1	336.0	+ 1.7	+ 1.5	+ 15.0
Wood products — Produits du bois	283.0	281.9	266.6	265.1	+ 0.4	+ 0.6	+ 6.2
Iron products — Produits du fer	464.1	460.7	410.8	410.6	+ 0.7	—	+ 13.0
Non-ferrous metals — Métaux non ferreux	333.6	331.6	320.5	319.5	+ 0.6	+ 0.3	+ 4.1
Non-metallic minerals — Minéraux non métalliques	272.3	268.9	255.2	257.7	+ 1.3	— 1.0	+ 6.7
Chemical products — Produits chimiques	235.1	235.0	227.6	227.4	—	+ 0.1	+ 3.3
	247.9	246.7	240.4	239.1	+ 0.5	+ 0.5	+ 3.1
Canadian farm products — (1935-39=100)(3) — Produits agricoles canadiens							
Eastern — Total — De l'est	313.1	304.7	270.7	265.9	+ 2.8	+ 1.8	(3)
Western — Total — De l'ouest	344.3	334.1	303.3	297.4	+ 3.1	+ 2.0	+ 13.5
Field — Cultures	281.9	275.3	238.1	234.5	+ 2.4	+ 1.5	(3)
Animal — Animaux	207.6	203.8	169.8	167.8	+ 1.9	+ 1.2	(3)
	418.7	405.6	371.5	364.1	+ 3.2	+ 2.0	+ 12.7
Selected price indexes — (2) — Certains indices de prix							
Thirty industrial materials — (1935-39=100) — Trente matériaux industriels	325.4	319.4	269.8	267.9	+ 1.9	+ 0.7	+ 20.6
Residential building materials — (1961=100) — Matériaux de construction résidentielle	171.6	170.8	149.0	149.1	+ 0.5	— 0.1	+ 15.2
Non-residential building materials — (1961=100) — Matériaux de construction non résidentielle	146.6	146.0	136.5	136.0	+ 0.4	+ 0.4	+ 7.4
Consumer price indexes — (1961=100) — Indices des prix à la consommation							
All-items — Tous les éléments	143.3	142.3	136.3	135.4	+ 0.7	+ 0.7	+ 5.1
Food — Alimentation	147.1	145.1	135.5	133.0	+ 1.4	+ 1.9	+ 8.6
Housing — Habitation	146.8	146.1	139.8	139.6	+ 0.5	+ 0.1	+ 5.0
Clothing — Habillement	135.1	134.9	131.1	131.0	+ 0.1	+ 0.1	+ 3.1
Transportation — Transports	133.4	133.1	131.5	131.0	+ 0.2	+ 0.4	+ 1.4
Health and personal care — Soins personnels et de santé	151.8	151.6	146.1	143.8	+ 0.1	+ 1.6	+ 3.9
Recreation and reading — Loisirs et lectures	141.4	141.3	136.3	136.8	+ 0.1	— 0.6	+ 3.7
Tobacco and alcohol — Tabacs et alcools	134.7	133.0	129.7	129.7	+ 1.3	—	+ 3.9
Security price indexes — (1961=100) — Indices des cours des valeurs mobilières							
Investors index — Total — Indices des portefeuillistes	189.2	181.0	150.0	137.9	+ 4.5	+ 8.8	+ 26.1
Industrials — Total — Industriels	198.0	188.4	150.1	137.8	+ 5.1	+ 8.9	+ 31.9
Industrial mines — Mines industrielles	121.4	118.8	111.5	98.9	+ 2.2	+ 12.7	+ 8.9
Food — Aliments	143.1	146.0	128.4	118.6	— 2.0	+ 8.3	+ 11.4
Beverages — Boissons gazeuses	260.0	251.6	201.3	186.7	+ 3.3	+ 7.8	+ 29.2
Textiles and clothing — Textiles et vêtements	169.5	164.2	122.0	112.8	+ 3.2	+ 8.2	+ 38.9
Pulp and paper — Pâte et papier	109.1	102.4	88.1	78.5	+ 6.5	+ 12.2	+ 23.8
Printing and publishing — Impression et édition	373.3	360.7	263.3	244.0	+ 3.5	+ 7.9	+ 41.8
Primary metals — Métaux primaires	115.2	107.7	88.1	78.4	+ 7.0	+ 12.4	+ 30.8
Metal fabricating — Fabrications des métaux	207.1	202.3	150.4	144.7	+ 2.4	+ 3.9	+ 37.7
Non-metallic minerals — Minéraux non métalliques	181.9	173.2	144.6	136.8	+ 5.0	+ 5.7	+ 25.8
Petroleum — Pétrole	363.8	333.1	240.5	224.8	+ 9.2	+ 7.0	+ 51.3
Chemicals — Produits chimiques	110.8	108.1	87.4	80.1	+ 2.5	+ 9.1	+ 26.8
Construction — Construction	122.9	123.3	62.8	53.5	— 0.3	+ 17.4	+ 95.7
Retail trade — Commerce de détail	171.6	168.5	135.7	127.7	+ 1.8	+ 6.3	+ 26.5
Utilities — Total — Services publics	154.9	150.6	148.8	139.2	+ 2.9	+ 6.9	+ 4.1
Pipeline — Pipe-line	181.6	181.9	171.0	162.3	— 0.2	+ 5.4	+ 6.2
Transportation — Transport	313.9	298.4	260.6	236.6	+ 5.2	+ 10.1	+ 20.5
Telephone — Téléphone	90.6	89.6	94.0	91.3	+ 1.1	+ 3.0	— 3.6
Electric power — Énergie électrique	125.5	119.0	124.8	111.6	+ 5.5	+ 11.8	+ 0.6
Gas distribution — Distribution du gaz	181.9	175.4	204.7	195.9	+ 3.7	+ 4.6	— 11.1
Finance — Total — Finances	196.2	189.4	154.2	139.4	+ 3.6	+ 10.6	+ 27.2
Banks — Banques	224.4	217.2	180.8	162.2	+ 3.3	+ 11.5	+ 24.1
Investment and loan — Placements et prêts	154.7	148.2	113.1	104.7	+ 4.4	+ 8.0	+ 36.8
Mining stocks — Actions minier							
General index — Indice général	104.4	104.5	90.4	84.3	— 0.1	+ 7.2	+ 15.5
Gold — Or	110.7	110.1	81.8	79.7	+ 0.5	+ 2.6	+ 35.3
Base metals — Métaux communs	101.8	102.4	95.9	87.6	— 0.6	+ 9.5	+ 6.2
Supplementary indexes — Indices supplémentaires							
Uranium — L'uranium	162.0	163.8	133.0	117.9	— 1.1	+ 12.8	+ 21.8
Primary oils and gas — Pétrole et gaz primaires	559.4	543.2	422.6	385.2	+ 3.0	+ 9.7	+ 32.4

Gross weighted, including inter-industry shipments. For explanation see page 82. — Indice pondéré brut comprenant les livraisons inter-industrielles.
Pour toute explication, voir page 82.
Indexes for 1972 are subject to revision. — Les indices pour 1972 sont sujets à révision.
Year to year percentage change not shown since these indexes are not comparable. Indexes subsequent to July 1970 are subject to revision. See notes page 82 for details of Western grain prices. — La variation proportionnelle d'une année à l'autre n'est pas indiquée étant donné que ces indices ne sont pas comparables. Les indices postérieurs à juillet 1970 sont sujets à révision. Voir les renvois de la page 82 pour les prix détaillés des grains de l'Ouest.

(1) Indexes for 1972 are subject to revision. - Les indices pour 1972 sont sujets à révision.

(2) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. - Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels:

	Old Series Ancienne série	New series Nouvelle série
December - 1970 - Décembre	95.1	92.3
January - 1971 - Janvier	95.1	92.1
Average - 1971 - Moyenne	95.2	91.8

Chicken, grade A evisc. - Poulet, qualité A, évis- céré	135.3	134.8	114.4	115.7	128.9	112.0	107.7
Turkey, grade A evisc. - Dinde, qualité A, éviscérée	114.1	112.0	95.2	96.2	105.4	95.8	99.1
Eggs, fresh, grade A large - Oeufs frais, qualité A gros	112.0	100.7	96.7	90.2	94.7	87.3	99.0
Eggs, fresh, grade A medium - Oeufs frais, qualité A moyens	119.8	107.6	99.0	91.7	97.3	86.8	98.6
<u>Beef - Boeuf</u>							
Sirloin steak - Bifteck de faux filet	148.0	144.4	145.3	143.7	152.4	143.4	139.7
Round steak - Bifteck dans la ronde	163.6	159.9	152.6	146.5	160.4	148.0	143.7
Prime rib roast(1) - Rôti de plat de côtes(1)	154.5	152.2	146.0	144.2	154.3	139.9	134.4
Blade roast(2) - Rôti de haut-côté(2)	149.4	146.4	139.7	132.5	148.9	133.1	133.5
Stewing beef - Boeuf pour ragoût	157.5	156.3	149.2	147.8	157.3	145.9	142.1
Hamburg - Boeuf haché	181.8	178.2	155.0	150.8	170.4	148.5	144.8
Liver, sliced - Foie en tranches	139.0	138.0	120.2	120.4	134.8	119.1	132.3
<u>Pork - Porc</u>							
Rib chops, fresh - Côtelettes fraîches	163.1	165.6	132.7	132.1	153.0	122.7	137.2
Shoulder roast, Boston butt, fresh - Rôti dans l'épaule, soc de Boston, frais	135.6	135.3	106.9	107.1	128.0	102.4	120.5
Sausage, pure pork - Saucisse pur porc	139.6	137.9	119.6	120.1	130.9	119.6	127.2
Bacon, side, fancy, sliced, rind off(6) - Bacon, flanc, de fantaisie, en tranches, sans couenne(6)	110.8	116.4	75.7	74.4	99.6	76.4	102.2
Ham, smoked, boneless(3) - Jambon fumé, désossé(3)	146.8	146.4	118.0	113.8	137.6	115.4	135.2
<u>Other meats - Autres viandes</u>							
Lamb, leg roast - Agneau, gigot	128.0	125.2	115.0	114.9	122.1	113.7	114.8
Veal, loin chops, rib end - Veau, côtelettes, bout de côte	205.0	203.6	166.8	165.9	189.9	165.0	162.6
Wieners or frankfurters - Saucisses de Francfort	130.4	129.7	118.9	120.3	127.8	119.0	121.5
Meat loaf, canned, mainly pork - Pain de viande, en conserves, principalement de porc	127.7	127.7	121.4	121.9	123.3	123.0	130.7
<u>Fish - Poisson</u>							
Cod filets, frozen(5) - Filets de morue, conge- lés(5)	229.0	228.1	180.0	174.5	210.8	160.6	143.3
Salmon, canned, fancy pink - Saumon, en boîte, de fantaisie, rose	156.2	154.6	146.5	146.4	149.0	143.0	144.1
<u>Fats and oils - Huiles et corps gras</u>							
Margarine	110.4	109.1	111.8	112.4	110.5	114.8	112.1
Lard, pure - Saindoux pur	123.5	122.0	113.7	113.7	118.7	111.4	118.7
Shortening	119.2	119.6	120.2	120.9	121.8	118.7	114.1
Salad dressing - Vinaigrette	111.1	111.2	107.9	107.6	109.9	105.4	104.7
<u>Cereals and bakery products - Céréales et produits de la boulangerie</u>							
Flour, white, all purpose - Farine blanche, tout usage	135.8	135.4	130.2	131.5	134.9	131.3	133.5
Corn flakes(7) - Flocons de maïs(7)	127.9	124.0	123.6	123.0	123.4	119.6	117.4
Macaroni - Macaronis secs	128.4	128.1	127.1	127.2	127.2	126.0	126.4
Cake mix, white - Mélange à gâteaux, blanc	125.9	125.6	123.1	122.7	124.6	118.5	122.1
Bread, plain, white, wrapped, sliced - Pain blanc uni, enveloppé, coupé	141.4	139.0	131.9	132.3	135.4	130.5	125.5
Soda crackers - Craquelins	120.1	119.6	113.9	114.4	118.3	113.1	117.9
<u>Sugar and sweets - Sucre</u>							
Sugar, granulated - Sucre cristallisé	160.4	160.8	129.0	127.4	159.8	126.9	117.2
Jam, strawberry(4) - Confiture de fraises(4)	129.3	126.9	122.9	123.6	124.6	122.7	126.4
Honey, No. 1, white - Miel n° 1, blanc	186.8	181.5	132.2	130.4	161.5	127.0	127.8

TABLE 10. Consumer Price Indexes for Canada - Selected Food Items - Concluded
TABLEAU 10. Indices des prix à la consommation pour le Canada - Denrées alimentaires choisies - fin
(1961=100)

	Déc. 1972	Nov. 1972	Déc. 1971	Nov. 1971	1972	1971	1970
Fruits							
Oranges, Californian, medium size (138) - Oranges de Californie, moyennes (138)	106.9	106.8	111.3	112.7	104.4	111.9	102.5
Grapefruit, white, 48's - Pamplemousses blancs, 48	129.5	133.2	125.0	139.3	153.4	154.8	140.9
Bananas, yellow - Bananes jaunes	77.0	78.3	71.8	72.6	79.3	76.2	85.7
Apples, volume seller - Pommes du type le plus vendu	118.1	109.4	97.2	96.0	123.8	118.8	112.8
Strawberries, frozen, fancy - Fraises congelées de fantaisie	132.8	131.6	122.1	121.7	123.9	121.6	127.6
Orange juice, conc., frozen, fancy - Jus d'orange concentré et congelé, de fantaisie	106.0	106.5	107.0	106.2	106.6	99.3	101.1
Apple juice, choice(8) - Jus de pomme de choix(8) ..	120.1	120.5	100.6	101.2	112.1	101.4	107.6
Orange juice, unsweetened - Jus d'orange non sucré ..	115.8	115.0	113.7	113.6	115.0	108.9	108.6
Pears, canned, choice - Poires en conserve de choix ..	127.9	124.7	122.7	122.7	124.5	120.7	123.7
Peaches, canned, choice, halves - Pêches en conserve, de choix, moitiés	148.2	143.1	139.0	138.3	140.8	135.5	139.0
Pineapple, Hawaiian, sliced - Ananas de Hawaïi, en tranches	95.7	96.3	96.0	96.4	96.0	96.1	100.2
Raisins, Californian and Australian - Raisins secs de Californie et d'Australie	170.0	162.7	149.0	148.6	153.4	150.2	153.0
Vegetables - Légumes							
Potatoes, No. 1 table - Pommes de terre n° 1 de table	149.1	140.6	108.3	102.3	128.2	114.7	134.0
Onions, No. 1 cooking - Oignons n° 1 à cuire	173.5	165.0	122.2	121.6	157.9	128.5	157.4
Carrots - Carottes	117.6	106.0	111.0	93.1	124.9	123.4	109.1
Turnips, Canada No. 1 - Navet canadien n° 1	157.8	155.7	124.1	121.6	154.2	125.1	171.0
Cabbage - Chou	170.0	152.0	123.3	99.0	171.9	150.4	167.4
Tomatoes, fresh - Tomates fraîches	191.0	173.0	233.3	135.4	167.5	162.2	143.7
Celery stalks, green - Céleri en branche, vert	160.0	150.2	201.1	142.7	164.2	141.6	150.3
Lettuce, head, fresh - Laitue pommée fraîche	220.6	157.1	255.0	204.3	162.9	160.8	139.9
Green peas, frozen, fancy - Pois verts congelés, de fantaisie	124.5	123.4	118.8	119.0	121.6	118.1	116.1
Green beans, fr. cut, frozen - Haricots verts coupés, congelés	108.2	107.5	104.4	104.1	106.0	102.7	102.4
Tomatoes, canned, choice - Tomates en boîte, de choix	136.3	134.5	131.0	130.5	131.9	128.9	131.6
Peas, canned, choice - Pois en boîte, de choix	134.0	133.1	120.8	120.7	125.1	117.0	125.7
Corn, canned, cream, choice - Maïs en boîte, en crème, de choix	128.3	127.5	119.6	120.6	122.5	119.9	124.7
Infants' food, vegetable - Aliments pour bébés, légumes	139.3	139.5	129.5	130.0	134.0	124.8	118.9
Beans, with pork and tomato sauce - Haricots au porc à la sauce tomate	138.1	138.8	135.0	135.1	134.5	131.6	129.3
Soup, vegetable - Soupe aux légumes	100.9	100.6	99.6	99.2	100.0	99.3	99.7
Tomato juice, fancy(8) - Jus de tomate de fantaisie(8)	111.9	110.6	103.9	103.8	107.7	100.4	100.3
Beverages - Breuvages							
Tea bags - Thé, sachets, orange pekoe	104.1	103.0	100.8	100.9	103.4	100.3	101.9
Coffee, medium quality - Café, qualité moyenne	135.3	137.2	128.2	128.8	129.6	132.2	132.4
Coffee, instant, dried - Café instantané, séché	119.7	119.4	112.2	112.2	114.2	112.3	112.9
Miscellaneous Groceries - Denrées diverses							
Tomato catsup - Ketchup aux tomates	127.1	128.9	122.4	121.5	124.3	115.9	112.6
Peanut butter, plain - Beurre d'arachides, ordinaire ..	131.9	133.5	133.5	134.8	132.3	136.9	139.8
Pickles, sweet, mixed - Cornichons sucrés variés ...	135.0	135.0	128.8	129.7	133.1	127.7	125.3
Jelly powders, flavoured - Gelée en poudre aromatisée	129.7	129.7	121.3	123.7	127.7	121.5	118.0

(1) Includes cuts with bone-in and boned and rolled. - Y compris les morceaux avec os, sans os et roulés.

(2) Includes cuts with blade-in and blade removed. - Y compris les morceaux avec ou sans palette.

(3) Indexes based on chain store prices in 7 cities. - Les indices sont fondés sur les prix dans les magasins à succursales multiples de 7 villes.

(4) Indexes based on prices for pectin and pure jam combined. - Les indices sont basés sur les prix de la confiture avec pectine et de la confiture pure.

(5) Indexes based on prices in 16 cities. - Les indices sont fondés sur les prix dans 16 villes.

(6) 1965=100. - 100 en 1965.

(7) 1963=100. - 100 en 1963.

(8) June 1968=100. - 100 en juin 1968.

TABLE 11. Consumer Price Indexes, Regional Cities, 1962-72(1)

TABEAU 11. Indices des prix à la consommation, agglomérations urbaines, 1962-72(1)

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 14. — Nota: (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au Tableau 14.

(1) For explanation see page 85. — Pour de plus amples explications, voir la page 85.

(2) The shelter element of regional cities housing indexes moves on the basis of changes in rents only, whereas in the Canada index this movement is derived from changes in both rents and homeownership costs. See also page 85. — Au niveau des agglomérations urbaines, l'élément logement de l'indice de l'habitation varie selon les changements dans les prix des loyers; par contre, au niveau du Canada, l'élément logement tient compte à la fois des changements dans les prix des loyers et dans les frais de possession d'une maison. Voir la page 85.

(3) Includes shelter and household operation. The shelter element of regional city housing indexes moves on the basis of changes in rents only, whereas in the Canada index this movement is derived from changes in both rents and home-ownership costs. See also page 85. — Comprend le logement et l'entretien du ménage. Au niveau des agglomérations urbaines, l'élément logement de l'indice de l'habitation varie selon les changements dans les prix des loyers; par contre, au niveau du Canada, l'élément logement tient compte à la fois des changements dans les prix des loyers et dans les frais de possession d'une maison. Voir aussi la page 85.

	dollars								
Corn, cracked — Maïs concassé	3.72	3.56	3.18	4.90	4.97	4.83	5.79	5.79	5.52
Oats, unground — Avoine, non moulue	3.44	3.25	2.92	2.55	2.38	2.28	3.83	3.72	3.54
Barley, ground — Orge moulue	3.47	3.34	3.06	2.54	2.44	2.24	3.88	3.77	3.68
Wheat, unground — Blé, non moulu	3.90	3.79	3.58	3.26	3.13	2.60	4.32	4.18	3.97
Bran — Son	4.22	3.64	3.16	3.60	3.61	3.54	3.58	3.49	3.31
Shorts — Gru	4.25	3.72	3.27	3.54	3.51	3.56	3.76	3.63	3.44
Middlings — Issues	4.23	3.82	3.42	3.58	..	3.10	3.71
Linseed oil meal — Farine de graine de lin	6.35	6.14	5.80	6.13	6.05	6.08	7.16	7.07	6.93
Soybean oil meal — Farine de soya	8.05	7.32	5.93	7.84	7.12	6.88	8.16	7.96	7.29
Calf starter — Moulée de début pour veaux (20-24%)	6.36	6.18	5.88	5.75	5.64	5.38	5.91	5.96	5.84
Dairy ration — Ration laitière (16%)	4.36	4.26	3.86	3.71	3.62	3.30	4.37	4.32	4.18
Dairy supplement (East) — Complément laitier (est) (24%)	5.23	5.00	4.71
Dairy supplement (West) — Complément laitier (ouest) (32%)	5.63	5.55	5.38	5.62	5.56	5.66
Pig starter mash — Moulée de début pour porcs	5.80	5.55	5.15	5.61	5.43	4.89	5.38	5.33	5.19
Hog concentrate — Concentré pour porcs (35%)	8.44	7.88	7.10	7.47	7.39	6.87	7.47	7.47	..
Hog grower mash — Moulée de croissance pour porcs	4.62	4.40	3.98	3.87	3.72	3.37	4.68	4.63	4.42
Chick starter mash — Moulée de début pour volailles (18-20%)	6.37	6.03	5.62	5.45	5.31	4.81	5.76	5.69	5.62
Growing mash — Moulée de croissance, pour volailles	5.16	4.96	4.60	4.37	4.17	3.71	5.22	5.20	5.03
Laying mash — Moulée de ponte (17-20%)	5.21	4.98	4.63	4.30	4.18	3.75	5.30	5.27	5.06
Broiler starter mash — Moulée début, poulets de grill (20-23%)	6.29	5.90	5.40	5.75	5.54	4.80	5.97	5.84	5.33
Turkey growing mash — Moulée de croissance, dindons	6.28	5.90	5.14	5.19	4.90	4.35	5.63	5.59	5.30

Note: Mash includes pellets, crumbles, cubes, etc.

Nota: Par pâtée on entend les boulettes, les morceaux, les dés, etc.

Nov.	170.8	146.0	243.9	206.0	190.0		
Déc.	171.6	146.6	244.1	206.5	190.4		
Average — Moyenne							

(1) Indexes for current year are subject to revision. — Les données de l'année courante sont sujettes à révision.

(2 & 3) From Tables 18 and 19. — Provenant des Tableaux 18 et 19.

(4) Weights used to combine wage rate series. — Coefficients de pondération utilisés pour réunir les séries sur les taux de rémunération:

(Source: Dept. of Labour)

(Source: Ministère du Travail)

Labourer — Ouvrier	46
Carpenter — Menuisier-charpentier	30
Painter — Peintre	7
Electrician — Électricien	5
Plumber — Plombier	5
Bricklayer and Mason — Briqueteur et maçon	3
Sheet Metal Worker — Ferblantier	2
Truck Driver — Conducteur de camion	2
Total	100

(5) Implicit weights of the 1961=100 arithmetically converted indexes, materials 51.9, wages 48.1. — Coefficients implicites de Pondération obtenus par conversion arithmétique à 1961=100, matériaux 51.9, main-d'oeuvre 48.1.

(6) Implicit weights materials 55.1, wages 44.9. — Coefficients implicites de Pondération, matériaux 55.1, main-d'oeuvre 44.9.

(7 & 8) National Income and Expenditure Accounts, Catalogue 13-001, quarterly. — (N° 13-001 au catalogue, trimestriel).

(8) This series contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in contractors profit and productivity. — Cette série comprend une composante génie aussi bien qu'une composante construction: elle n'a donc pas tout à fait la même portée que l'indice synthétique pour la construction non-résidentielle. Les indices synthétiques sont corrigés des variations des profits et de la productivité des entrepreneurs.

* For further detailed explanation see Prices and Price Indexes — May 1970. Pour des explications détaillées voir Prix et indices des prix — Mai 1970.

TABLE 26. Price Indexes of Electric Utility Construction, Canada, Annually 1957 Forward

1961=100

TABLEAU 26. Indice des prix à la construction dans les services d'électricité, Canada, par année depuis 1957

Item - Article	Year - An															
	1957	1958	1959	1960	1961	1962	1963	1964	1965	1966	1967	1968	1969	1970	1971P	
Distribution systems - Total(5) - Réseaux de distribution	96.5	93.2	96.8	100.3	100.0	101.8	102.5	104.6	107.1	112.4	116.1	115.6	120.3	129.3	133.4	
Construction - Construction	91.9	93.5	96.3	98.5	100.0	102.5	105.2	107.7	112.3	118.4	125.3	126.3	133.0	144.5	149.0	
Equipment - Matériel	106.6	92.5	97.9	104.3	100.0	100.4	96.4	97.6	95.4	99.0	95.7	91.8	91.8	95.4	98.7	
Transmission lines - Total(5) - Lignes de transmission	94.4	95.7	97.0	98.9	100.0	100.9	102.3	102.7	108.5	113.0	118.7	121.9	127.5	136.5	141.9	
Transformer stations - Total(5) - Postes de transformation	118.1	109.0	113.5	109.8	100.0	105.1	107.6	112.0	118.0	122.4	121.2	117.2	120.4	132.2	138.6	
Structures and improvements - Installations et améliorations	105.6	101.3	102.6	103.3	100.0	102.6	108.9	112.9	124.0	131.0	127.2	123.5	131.3	137.4	139.0	
Equipment - Matériel	132.6	118.4	123.2	115.7	100.0	105.9	107.3	111.9	117.4	120.4	115.1	106.7	106.1	119.4	125.2	
Hydro-electric generating stations(6) - Centrales d'énergie hydro-électrique(6)					100.0	102.7	106.0	109.5	114.8	121.8	126.2	131.3	139.2	147.8	153.1	

(1) To assist comparison with other published series the indexes presented have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request. - Pour faciliter la comparaison avec d'autres séries publiées, ces indices ont été recalculés sur la base 1961=100; les indices originaux (1956=100) sont disponibles.

(2) The years referred to are fiscal years. For example 1957 represents the period April 1, 1957 to March 31, 1958. - Les années données ici sont des années financières. Par exemple, l'année 1957 représente la période allant du 1^{er} avril 1957 au 31 mars 1958.(3) Major components for the provincial indexes are presented annually in *Construction price statistics*, Service Bulletin No. 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans *Statistiques des prix dans la construction*, Bulletin de service n° 62-006.

(4) Direct comparisons should not be made between this index and the highway index published by the Ont. Dept. of Highways. The item content of the indexes is different. - On ne peut comparer directement cet indice avec celui de la voirie publié par le Ministère de la voirie de l'Ontario. Les éléments des deux indices sont différents.

(5) For further detailed explanation see occasional paper 62-526. - Pour plus de renseignements, voir le bulletin hors série n° 62-526 au catalogue.

(6) For further detailed explanation see occasional paper 62-533. - Pour plus de renseignements, voir le bulletin hors série n° 62-533 au catalogue.

Explanation of Methods Used and Additional
Sources for Price Series

Industrial Price Indexes

Industry Selling Price Indexes (1961=100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced are responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue No. 62-528.

Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

Purchase Price Indexes of Secondary Metals
(1969=100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Canadian Farm Products Price Index (1935-39=100)

Prices of Western wheat used in the index prior to August 1972, are buying prices of the Canadian Wheat Board for Nos. 1, 2 and 3 Northern at Thunder Bay. From August 1, 1972 forward, prices used are for Nos. 1 and 2 C.W. Red Spring 14 % at Thunder Bay. Prices for western oats and barley are also supplied by the Wheat Board. Initial payments are first used in the index calculation and are revised as further payments are announced.

Final payments for the crop year August 1970 - July 1971 were announced on February 11, 1972 for wheat, and on June 21, 1972 for oats. No final payment was granted for barley for the 1970-71 crop year, however, the initial payment was increased by 10¢ on February 25, 1971.

supplémentaires des séries de prix

Indices des prix industriels

Indices des prix de vente dans l'industrie (1961=100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles on recueille des statistiques sur les expéditions de produits, sur l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", n° 62-528 au catalogue.

Indices des prix de vente dans l'industrie: Industries manu-
facturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix des livraisons des industries manufacturières qui utilisent de la farine comme ingrédient de leurs produits, tels que le pain, les biscuits ou les gâteaux.

Indices du prix d'achat des métaux de deuxième fusion
(1969=100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice des prix des produits agricoles canadiens (1935-39=100)

Les prix du blé canadien sur lesquels étaient basés le calcul de l'indice avant le mois d'août 1972 étaient les prix payés par la Commission canadienne du blé pour le blé nos 1, 2 et 3 du Nord à Thunder Bay. À compter du 1^{er} août 1972, les prix utilisés sont ceux du blé rouge de printemps, nos 1 et 2 (14 %) à Thunder Bay. Pour calculer l'indice, on se sert d'abord des premiers paiements et on les rectifie à mesure que d'autres paiements sont annoncés.

Les prix définitifs pour la campagne allant d'août 1970 à juillet 1971 ont été annoncés le 11 février 1972 en ce qui concerne le blé et le 21 juin 1972, en ce qui concerne l'avoine. Il n'y a pas eu de dernier paiement pour l'orge en 1970-1971; toutefois, le paiement initial a été majoré de 10 cents le 25 février 1971.

- (1) Used in original indexes from Aug. 1970 to July 1971. — Utilisé dans les premiers indices d'août 1970 jusqu'en juillet 1971.
 (2) Incorporated retroactively in revised final indexes Aug. 1970 to July 1971. — Inclus rétroactivement dans les indices finals révisés d'août à juillet 1971.
 (3) Used in indexes Aug. 1971 to July 1972. — Utilisé dans les indices d'août 1971 jusqu'en juillet 1972.
 (4) Increases in initial payments announced in October are incorporated into index from August 1972. — Les augmentations de paiements initiaux annoncées en octobre sont prises en compte dans l'indice à partir du mois d'août 1972.

General Wholesale Index (1935-39=100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things

Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité, l'expression "de gros" fait penser plus au commerce de gros qu'au niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de dire exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, cet indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix des produits. En

are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: Wholesale Price Indexes 1913-50 (Reference Paper No. 24) Prices and Price Indexes 1949-52 (Vol. 23) (Catalogue No. 62-501).

Thirty Industrial Materials,
1935-39 = 100

The price index of thirty industrial materials is calculated as an unweighted geometric average prices of the selected commodities. The formula is as follows:

$$\frac{\sqrt[30]{P_{tN}^1 \times P_{tN}^2 \times P_{tN}^3 \times \dots \times P_{tN}^{30}}}{\sqrt[30]{P_{t \ 35-39}^1 \times P_{t \ 35-39}^2 \times P_{t \ 35-39}^3 \times \dots \times P_{t \ 35-39}^{30}}}$$

The selection of materials for pricing related to groups such as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We plan to construct an index of industrial prices that will relate to current usage of materials and that will be of the more traditional Laspeyres type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

tant que chiffre représentatif classique, on a eu tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros, consulter Wholesale Price Indexes 1913-50 (Reference Paper No. 24) et Prices and Price Indexes 1949-52 (Vol. 23) (n° 62-501 au catalogue).

Indice des prix de trente matières industrielles
(1939-39 = 100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

$$\frac{\sqrt[30]{P_{tN}^1 \times P_{tN}^2 \times P_{tN}^3 \times \dots \times P_{tN}^{30}}}{\sqrt[30]{P_{t \ 35-39}^1 \times P_{t \ 35-39}^2 \times P_{t \ 35-39}^3 \times \dots \times P_{t \ 35-39}^{30}}}$$

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

Retail Price Indexes

Consumer Price Index for Canada (1961=100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services of items for which there is a continually measurable market price over time, corresponding to a specific quantity of the item.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index is unlikely to represent closely the experience of any one family within the group nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families - (a) living in cities with over 30,000 population, (b) ranging in size from two adults to two adults with four children, and (c) with annual incomes during 1957 ranging from \$2,500 to \$7,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In 1952, the time base was updated to 1949=100 from 1935-39=100 and, at the same time, weights were revised to reflect family expenditure patterns in 1947-48. A subsequent revision of weights based on 1957 expenditures was introduced at the beginning of 1961 and the time base was revised from 1949=100 to 1961=100 at the beginning of 1969.

Full details on the latest weighting patterns and time base revisions are available in the occasional paper "The Consumer Price Index for Canada (1949=100) - Revision based on 1957 Expenditures", Statistics Canada Catalogue No. 62-518 and in the January 1969 issue of the monthly bulletin, Prices and Price Indexes, Catalogue No. 62-002.

Consumer Price Indexes for Regional Cities (1961=100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). The regional indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada except for their individual weighting systems.

Also, city indexes are not as comprehensive in price content as the Canada consumer price index and may underestimate slightly the degree of price movements occurring. In this connection, the shelter component of the city indexes moves on the basis of changes in rents only, whereas changes in both rents and homeownership costs are included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and all-items indexes for cities have tended to underestimate somewhat the rates of price increase, particularly over longer periods. Studies are under way to incorporate homeownership prices in city indexes.

Each index is designed to measure the influence of changes in retail prices taking place in the localities specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in those particular areas.

Indices des prix de détail

Indice des prix à la consommation au Canada (1961=100)

L'indice des prix à la consommation sert à mesurer le taux de variation du prix qu'il en coûte pour acheter un "panier" de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" demeure le même; il équivaut tout au moins à une quantité égale de biens et services de qualité égale; de plus, il est constitué de produits pour lesquels on peut toujours trouver sur le marché un prix mesurable et correspondant à une quantité déterminée de ce produit.

L'indice porte sur un groupe étendu mais bien déterminé de familles urbaines et rend compte des variations des prix auxquelles l'échantillon en question a dû faire face. Il est fort peu probable que l'indice représente fidèlement l'expérience d'une famille en particulier; de même, il ne faut pas s'attendre à ce qu'il rende compte des variations des prix auxquelles ont fait face des groupes sensiblement différents par le revenu, la taille de la famille et le lieu de résidence. L'échantillon sur lequel porte l'indice est composé de familles - a) vivant dans des villes de plus de 30,000 habitants, b) dont la taille oscille entre deux adultes et deux adultes avec quatre enfants et c) dont le revenu annuel en 1957 oscillait entre \$2,500 et \$7,000. Pour évaluer l'influence des variations de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation porte sur les variations d'environ 300 articles.

L'indice des prix à la consommation au Canada remonte au début du siècle; depuis lors, on a révisé périodiquement la période de référence et les schémas de pondération. Ainsi, en 1952, la période de référence est passée de 1935-1939=100 à 1949=100; à la même occasion, les poids ont été revus de façon à présenter un reflet de la structure des dépenses des familles en 1947-48. La révision suivante des facteurs de pondération était fondée sur les dépenses des consommateurs en 1957 et fut introduite au début de 1961. Enfin, c'est au début de 1969 qu'on porta la période de 1949=100 à 1961=100.

Le lecteur trouvera de plus amples renseignements sur les dernières révisions du schéma de pondération et de la période de référence dans la publication occasionnelle "The Consumer Price Index for Canada (1949=100) - Revision based on 1957 Expenditures" (n° 62-518) et dans la livraison de janvier 1969 du bulletin mensuel "Prices and Price Indexes" (n° 62-002).

Indices des prix à la consommation dans certaines agglomérations urbaines (1961=100)

Ces indices sont publiés mensuellement dans le présent bulletin (voir Tableau 11). Par leur conception et par les éléments qui les composent, ces indices sont en général similaires à l'indice des prix à la consommation au Canada, seuls leurs coefficients de pondération diffèrent.

Aussi, les indices de prix dans les villes ne représentent pas les prix de façon aussi complète que l'indice des prix à la consommation au Canada et ils peuvent sous-estimer légèrement l'importance des mouvements de prix. C'est ainsi que l'élément "logement" des indices des villes varie en fonction des changements dans les loyers uniquement, alors que l'indice pour l'ensemble du Canada comprend les loyers et les coûts de propriété. À la suite d'une augmentation des coûts de propriété plus rapide que celle des loyers, les indices de l'habitation et de tous les éléments pour les villes ont tendu à sous-estimer quelque peu les taux de croissance des prix, surtout sur de plus longues périodes de temps. On étudie actuellement l'incorporation des prix de propriété dans les indices des villes.

Chaque indice est conçu de façon à mesurer les conséquences des variations des prix de détail survenues dans les agglomérations en question sur le prix d'un panier constant de biens et de services représentant la consommation d'un groupe représentatif de familles appartenant à ces secteurs.

In using the city indexes, it should be remembered that they are not indicators of comparative levels of prices as between the cities. That is, they do not in any way indicate whether prices are higher or lower in one city than in another.

For comparisons of retail price differentials between cities see Table 14 of this publication and the relevant explanatory note.

Historical Consumer Price Indexes (1969=100) for "Thunder Bay" and "Quebec City" are available, with explanatory notes on request from Retail Prices Section, Prices Division, Statistics Canada.

Measuring the Purchasing Power of Earnings

Changing consumer price levels affect the amounts of goods and services which a dollar will buy, and average earnings, of course, will be affected in the same way. An earnings measurement which takes the change of consumer prices into account, can be calculated by reducing actual earnings averages by the percentage amounts consumer price levels rise, or increasing them by the amount price levels fall. The adjusted averages may be used to indicate the comparative quantities of goods and services which could be purchased by average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100 in week B, and that in the same interval a consumer price index advances from 100.0 to 110.0. Because of the 10 % rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. Likewise, a 25 % rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price increase. The adjusted average is \$90.91 ($100.0/110.0 \times \$100.$), which may be referred to as a weekly wage average for week B expressed in the dollars of period A, or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express in index number form the relationship between the week A average of \$80.00 and the week B figure of \$90.91. Taking the week A average of \$80.00 as equal to 100.0, the week B index becomes 113.6 ($90.91/80.00 \times 100.0$). Such an index may be called an index of weekly real wages. It indicates that average wages for week B will buy 13.6 % more goods and services than those received in week A, in spite of a 10 % rise in consumer prices. This 13.6 % increase in real wages compares with the rise of 25 % in money wages ($100.00/80.00 \times 100.0$).

It should be noted that while the estimates of average real wages may reflect the experiences of broad groups of workers fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular income group. Group-spending patterns change over periods of time. To the extent that this occurs, the earnings data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be rendered

Le lecteur devra toujours garder en mémoire que ces indices ne sont pas des indicateurs qui permettent de comparer le niveau des prix d'une ville à l'autre et qu'ils n'indiquent en aucune façon si les prix sont plus ou moins élevés dans une ville que dans une autre.

Pour étudier les différences de prix au détail entre les villes, il faut consulter le Tableau 14 de ce bulletin et les notes explicatives qui l'accompagnent.

Les indices chronologiques des prix à la consommation (1969=100) pour Québec et Thunder Bay et les notes explicatives qui les accompagnent peuvent être obtenus de la Section des prix de détail de la Division des prix de Statistique Canada.

Calcul du pouvoir d'achat

Toute variation des prix à la consommation influe directement sur la quantité de biens et de services qu'on peut acheter avec un dollar et par conséquent sur le revenu moyen. Pour mesurer le revenu en tenant compte de la variation des prix à la consommation, on peut déduire du revenu moyen réel le montant proportionnel qui correspond à l'augmentation des prix à la consommation ou ajouter au revenu réel le montant qui équivaut à la diminution des prix à la consommation. Ces moyennes corrigées peuvent ensuite servir à déterminer la quantité de biens et de services qu'on aurait pu acheter grâce à un revenu moyen, les prix à la consommation et les habitudes de consommation n'ayant pas changé. On trouvera ci-dessous des exemples de cette méthode.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B et que dans la même période de temps l'indice des prix à la consommation progresse de 100.0 à 110.0. En raison de l'augmentation de 10 % des prix à la consommation, on n'obtiendra plus autant avec \$1 au cours de la semaine B que pendant la semaine A. De même il serait exagéré de dire que, pour une augmentation de la rémunération de \$80 à \$100 le pouvoir d'achat du salaire hebdomadaire moyen s'est élevé de 25 %. On peut ramener cette augmentation à des proportions plus justes en déduisant du nouveau salaire hebdomadaire moyen l'augmentation des prix à la consommation. La rémunération moyenne corrigée s'établira donc à \$90.91 ($100.0/110.0 \times \$100.$), dont on peut dire qu'elle exprime la rémunération hebdomadaire moyenne de la semaine B en dollars de la semaine A, ou encore qu'elle rend compte du niveau effectif de la rémunération hebdomadaire de la semaine B par rapport à la semaine A.

On peut pousser plus loin les calculs et exprimer à l'aide d'un indice la relation entre le salaire moyen de la semaine A (\$80) et celui de la semaine B (\$90.91). Ainsi, si l'on considère que la rémunération moyenne de \$80 de la semaine A était égale à 100.0, l'indice de la semaine B deviendra 113.6 ($90.91/80.00 \times 100.0$). On pourrait appeler cet indice l'indice de la rémunération hebdomadaire effective; il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6 % de plus en biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10 % des prix à la consommation. L'augmentation de 25 % des salaires se ramène donc à une augmentation effective de 13.6 % ($100.0/80.00 \times 100.0$).

Il convient de souligner que, même si les estimations de la rémunération moyenne effective résument assez bien la situation d'un large éventail de travailleurs, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur le revenu porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur le revenu rajustées par l'indice des prix à la consommation (les habitudes de consommation étant "fixes") perdront graduellement de leur

less valid. Finally, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce savings to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual and real wages uses 1961 as a reference year. However, the adjustment made in the foregoing illustration can be applied to any reference level; percentage change between any two periods will be the same regardless of the reference period selected.

Inter-City Retail Price Comparisons

Statistics relating to differences in retail prices between Canadian cities were initially developed for food, and subsequently extended to cover such other elements of the family budget as clothing, transportation, household operation, health and personal care, recreation and reading, and tobacco and alcohol. In all, inter-city price comparisons are drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based with the major omission being shelter (both rented and owned.) While recognizing the importance of shelter differentials in any overall comparison of the general price level being encountered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require further research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

Table 14 presents the results of an updating of earlier spatial retail price measurements to May 1971 and includes more complete data on several cities. A fuller explanation of the study from which this table is derived is contained in the November 1968, November 1969 and April 1972 issues of *Prices and Price indexes* (Statistics Canada, Catalogue Number 62-002).

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes. In developing these spatial price comparisons efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices equalling 100 to facilitate comparisons over the whole range of cities. Except for foodstuffs and new passenger cars for which inter-city price differentials were

valeur. Enfin, il ne faut pas oublier qu'une partie du revenu peut être consacrée à l'épargne et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations du revenu effectif calculées à partir de moyennes du revenu brut peut différer de l'évaluation des variations du pouvoir d'achat du revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de la rémunération effective ne sert pas à mesurer les variations des niveaux de consommation des salariés et de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente la rémunération tant réelle qu'effective prend pour base l'année 1961. Toutefois, les ajustements illustrés dans les exemples ci-dessus peuvent s'appliquer à tout niveau de référence; la variation proportionnelle entre deux périodes sera en effet identique quelle que soit la période de référence choisie.

Comparaisons entre les prix de détail d'une ville à l'autre

À l'origine, la statistique des différences entre les prix de détail d'une ville du Canada à l'autre a été mise au point pour l'alimentation; par la suite, on l'a étendue à d'autres postes du budget familial tels que l'habillement, les transports, l'entretien du ménage, la santé et les soins personnels, les loisirs et la lecture, et le tabac et l'alcool. Au total, les comparaisons d'une ville à l'autre portent sur des biens et des services constituant près des trois quarts du budget servant actuellement à construire l'indice des prix à la consommation au Canada, la seule grande omission étant le logement (location et frais de possession). Sans vouloir nier l'importance des différences en ce qui concerne le logement dans toute comparaison globale du niveau général des prix aux quels les consommateurs doivent faire face dans divers centres urbains, il faut bien dire que les problèmes que comporteraient l'établissement d'une comparaison valable d'une ville à l'autre sont tels qu'ils nécessitent plus de recherche. Entre-temps, on estime que malgré l'absence actuelle de données sur les dépenses de logement, la publication de comparaisons des prix de détail pour d'autres postes du budget permettra de faire de gros progrès en ce qui concerne la satisfaction des besoins variés des utilisateurs.

On trouvera au Tableau 14 le résultat d'une mise à jour de mesures de prix de détail tirées précédemment jusqu'à mai 1971, ainsi que des données plus complètes sur plusieurs villes. Une explication plus détaillée de l'étude dont le tableau en question est tiré figure dans les livraisons de novembre 1968, novembre 1969, et avril 1972 de *Prices and Price Indexes* (n° 62-002 au catalogue).

Les premières données de base pour la présente étude ont été constituées par l'importante collection de prix de détail recueillie lors de la confection des indices nationaux et urbains des prix à la consommation. Au moment d'établir ces comparaisons géographiques de prix, on s'est efforcé d'assurer la comparabilité en prenant des biens et des services de qualité égale et en assortissant autant que possible les points de vente au détail par type. Les relations de prix entre paires de villes ont été calculées puis converties à la base commune des prix de Winnipeg = 100 afin de faciliter des comparaisons pour l'ensemble de toutes les villes. Sauf pour les denrées alimentaires et les voitures neuves, pour lesquelles les dif-

derived directly from new comparisons based on May 1971 price data, the updating of these measurements of inter-city retail price differentials was accomplished by application of the relative movement of prices, at the item level in each city, over the intervening periods as derived from the relevant city consumer price indexes. These price relationships at the item level were aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns exist among cities, the magnitude of these differences in the cities covered is not such as to affect most of the spatial comparisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-urban retail price differentials, aggregative indexes beyond major budget groupings are not shown.

It should be noted that the retail prices used in this comparisons, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of non-food commodities can be of significance in explaining inter-city price differentials for these items.

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.

Farm Input Price Indexes (1961=100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. These data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961=100 time base.

Farm Input Price Indexes replace one of the two major component indexes of the previously published series, Price Index Numbers of Commodities and Services Used by Farmers, 1935-39=100. The latter index was composed of a Farm Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replaces the Composite Index Exclusive of Living Component from 1961 forward.

A detailed description of concepts, methods and data sources is contained in the occasional paper, Farm Input Price Indexes, 1961=100, Catalogue No. 62-534, and is reproduced in the September 1971 issue of Prices and Price Indexes, Catalogue No. 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, Farm Input Price Indexes, 1961=100, Catalogue No. 62-004, and in the monthly publication Prices and Price Indexes, Catalogue No. 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterpart, and publication has been suspended.

férences de prix entre villes ont été tirées directement de nouvelles comparaisons fondées sur les données de mai 1971, la mise à jour de ces mesures des différences de prix de détail entre les villes a été assurée grâce l'extension des mouvements relatifs de prix au niveau de chaque article dans chaque ville aux périodes observées selon le calcul établi à partir de l'indice des prix à la consommation pour la ville en question. Ces relations entre les prix au niveau de l'article ont été agrégées sur la base des habitudes de consommation du citoyen pour l'ensemble du Canada et non pas selon les habitudes de dépense applicables à des villes individuelles. Même s'il existe des différences dans les habitudes de dépense d'une ville à l'autre, l'importance de ces différences en ce qui concerne les villes dont il est question ici ne sont pas suffisantes pour influencer sensiblement sur la plupart des comparaisons géographiques. Du fait de l'absence des relations de prix en ce qui concerne le logement, dont il a déjà été question ci-dessus et qui pourrait avoir une importance considérable chaque fois que l'on voudrait tirer une comparaison globale entre les différences de prix à la consommation au détail d'une ville à l'autre, on ne trouvera ici aucun indice synthétique agrégé au-delà des principales composantes du budget.

Il faut remarquer que les prix de détail ayant servi à la présente comparaison sont ceux que doit payer le consommateur et comprennent donc les taxes de vente et les taxes d'accises qui peuvent s'appliquer. Les différences d'une province à l'autre entre les barèmes de taxe de vente imposés sur une grande variété de biens non alimentaires peut avoir une grande importance pour expliquer les différences de prix d'une ville à l'autre pour les articles en question.

Le fait que ces indices aient été exprimés en prenant Winnipeg = 100 ne signifie pas que le choix de Winnipeg comme ville de référence ait une signification particulière et les indices pourraient être exprimés sur la base de n'importe laquelle des villes qui y figurent.

Indices de prix des entrées dans l'agriculture (1961=100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui y sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961=100.

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39=100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

Le bulletin hors série Farm Input Price Indexes, 1961=100 (n° 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est reprise dans Prices and Price Indexes de septembre 1971 (n° 62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest du Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel Farm Input Price Indexes, 1961=100 (n° 62-004) et dans le bulletin annuel Prices and Price Indexes (n° 62-002).

On n'a pas remplacé l'indice du coût de la vie pour la famille agricole des séries de 1935-39 par un équivalent à jour et on a cessé de le publier.

Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto, Montreal and Canadian stock exchanges. The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the common and mining stock indexes are Thursday's closing quotations as reported in the Globe and Mail and the Montreal Gazette. For preferred stocks, prices are monthly weighted averages of the daily closing prices in which weights are daily total sales. The price reference base for the indexes is the year 1956 which has been adopted as an interim base for recently developed Statistics Canada indexes. The indexes express prices as a percentage of prices in 1956 and arithmetically converted to the 1961=100 base.

Revised indexes on the base 1956=100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the index, apart from the shift in the price reference base, is the classification of stocks according to the Standard Industrial Classification. In the continuing major group Industrials 4 sub-groups (Milling and Grains, Food and Allied Products, Machinery and Equipment, and Building Materials) have been replaced by 8 new sub-groups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-Metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of the former index, viz., Industrial Mines, Leverages, Textile and Clothing, Pulp and Paper, and Oils (renamed Petroleum) have been continued. The major group Utilities is continued but the Pipelines index has been added as a sub-group and the previous Power and Traction sub-group has been replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A new major group Finance is composed of the former major group Banks and the former supplementary index Investment and Loan. Constant weights, which were previously limited to major groups, have been extended to sub-groups. Weights in the index continue to be based on shares outstanding.

For the list of stocks currently included in the Inventors Index and Preferred Index, see Prices and Price Indexes for February 1972.

Residential and Non-Residential Building Construction Price Indexes

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of users (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of Prices and Price Indexes, and this explanation is available on request from the Prices Division, as is historical monthly data or the series.

Because the indexes measure the impact of price change on the materials and labour inputs to construction, and not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as indicators of price change for the output of building construction, or buildings in place. Users are therefore warned to exercise caution in making use of the series, for this purpose. A comparison of these series with the implicit price deflators (1) providing an estimate of price change for the output of the industry, derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of adjusting the fixed-weighted input indexes or changes in productivity and profit margins.

(1) National Income and Expenditure Division, Statistics Canada.

Indices des cours des valeurs mobilières

Les indices des cours des valeurs mobilières donnent une mesure dans le temps de l'effet du mouvement des prix sur la valeur d'un portefeuille de titres achetés et détenus par un placeur hypothétique (et non pas un spéculateur). Le portefeuille représente des titres des sociétés canadiennes cotées à la Bourse de Toronto, de Montréal et à la Bourse canadienne. Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation. Les indices des prix des titres ordinaires et des titres miniers sont les cours de fermeture de la Bourse du jeudi indiqués dans le Globe and Mail et dans la Montreal Gazette. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles du total des ventes quotidiennes. La base de pondération entre les sous-groupes est l'année 1956. Toutes les séries ont été recalculées sur la base de 1961=100. Les indices sont pondérés d'après le nombre d'actions en circulation.

Les indices révisés sur la base 1956=100 ont été publiés pour la première fois dans la livraison de juin 1962 de ce bulletin. La plus importante modification à la révision de l'indice, à part le changement de la période de référence, a été le classement des actions d'après la Classification des activités économiques. Dans le cas du grand groupe des valeurs industrielles, 4 sous-groupes (minoterie et céréales, aliments et produits connexes, machines et matériel et matériaux de construction) ont été remplacés par 8 nouveaux sous-groupes (aliments, imprimerie et édition, métaux primaires, produits métalliques, minéraux non métalliques, produits chimiques, construction et commerce de détail). On a conservé les 5 autres sous-groupes de l'ancien indice: mines industrielles, boissons, textiles et habillement, pâtes et papiers, et huiles (sous la désignation de pétrole). Le grand groupe des services d'utilité publique a été conservé mais l'indice des pipe-lines a été ajouté comme sous-groupe et l'ancien sous-groupe d'énergie et traction a été remplacé par deux nouveaux sous-groupes: l'énergie électrique et la distribution du gaz. Le nouveau grand groupe "Finances" est composé de l'ancien grand groupe banques et de l'ancien indice supplémentaire investissements et prêts. Les facteurs constants de pondération qui étaient autrefois limités aux grands groupes s'appliquent maintenant aux sous-groupes. Les facteurs de pondération de l'indice continuent à être basés sur les actions en circulation.

La liste des titres repris actuellement dans les indices des valeurs de placements et dans les indices des valeurs privilégiées se trouve dans Prix et indices des prix de février 1972.

Indices des prix de la construction résidentielle et non résidentielle

Les indices à pondération fixe des prix des entrées de matériaux et de salaires dans la construction résidentielle et non résidentielle sont publiés ici pour faciliter la tâche aux utilisateurs (Tableau 20). On trouvera une description plus détaillée des caractéristiques des indices dans Prices and Price Indexes de mai 1970. On peut s'en procurer un exemplaire ainsi que les données mensuelles chronologiques sur cette série en s'adressant à la Division des prix.

Comme les indices mesurent l'influence des variations de prix sur les entrées de matériaux et de main-d'oeuvre du bâtiment plutôt que les répercussions des variations de marges bénéficiaires ou de productivité, on les croit surestimés en tant qu'indicateurs des variations de prix de la construction, ou des bâtiments construits. Les utilisateurs devront donc faire preuve de discernement quand ils se serviront des séries à cette fin. Si l'on compare ces séries avec les facteurs de dégonflement (1) des prix implicites (qui donnent une estimation de la variation du prix pour la production de l'industrie), obtenus en mesurant la formation brute de capital fixe en dollars constants, on aura un aperçu des effets de l'ajustement sur l'évolution des prix des indices à pondération fixe des entrées pour tenir compte des variations de productivité et de marges bénéficiaires.

(1) Division du revenu national et de la défense nationale, Statistique Canada.

During the period from 1926-1966 a special sample of respondents supplied materials prices for the index. As of 1961 this sample has been replaced with prices from the ISPI system(2). The latter are published monthly in Table 2 of this publication.

The Construction wage rate series is based on wage rate material supplied by the Labour Standards Branch, Dept. of Labour, and relates to minimum wages paid on government contracts for construction in a variety of trades and cities.

Users are reminded that the indexes were arithmetically rebased to the year 1961=100 and therefore combining the components with the weights as shown will not provide the composite index provided. Users able to provide their own weights for the components can recombine the components to suit their particular needs.

Basic Union Wage Rate Indexes for Major Construction Trades

Basic union wage rate indexes are prepared for 12 major construction trades in each of 14 cities in Canada. Weighted average city indexes are prepared as well as a 14 city composite. Indexes are released quarterly in summary form in Tables 21 and 22 of Prices and Price Indexes (62-002). This index is found in Table 20 of Prices and Price Indexes (62-002). Full trade detail, by city, is published quarterly in the Construction Price Statistics Service Bulletin, (62-006).

Rates utilized in index calculations are derived mainly from the Construction Collective Agreement Survey Service provided by the Canadian Construction Association. These rates are supplemented as necessary by surveys of some union locals. While indexes containing supplementary benefits will be available soon, presently published indexes relate to basic union wage rates only. The rates indicate the rate of straight time compensation for one hour in the city specified. Rates converted into the form of ratios were combined into weighted average city indexes utilizing 1961 Census of Population data on numbers of people employed by trade and average earnings in the construction industry.

The base-weighted indexes provide an estimate of the impact of rate change on basic union wages for the major construction trades employed in a given city. Because union workers in cities tend to be engaged mainly in non-residential or commercial building construction and because rates for trades associated with engineering work were excluded from the price sample the indexes best approximate wage rate change for non-residential construction.

Highway Construction Price Indexes (1961=100)(3)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the previously published indexes to a 1956=100 time base. Users are warned that an

(2) Industry Selling Price Indexes 1956-1968 Cat. 62-528.

(3) The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

Au cours de la période 1926-1966, un échantillon spécial d'enquêtés a donné les prix pour l'indice. En 1961, on a remplacé cet échantillon par les prix tirés du système I.P.V.I.(2). Ces prix sont publiés par mois dans le Tableau 2 du présent bulletin.

La série consacrée au taux de rémunération dans l'industrie du bâtiment est basée sur les chiffres fournis par la Direction des normes du travail du ministère du Travail; elle a trait au salaire minimum versé aux termes de marchés signés avec le gouvernement pour des travaux de construction dans divers corps de métiers et dans diverses villes.

Nous rappelons aux utilisateurs que les indices ont été recalculés sur la base 1961=100 et qu'ils n'obtiendront pas l'indice synthétique fourni en combinant les éléments et les pondérations donnés. Les utilisateurs qui sont à même de fournir leur propre pondération pour les éléments peuvent procéder à leur propre combinaison adaptée à leurs besoins spécifiques.

Indices du salaire syndical de base dans les principaux corps de métiers

Les indices du salaire syndical de base portent sur les 12 principaux métiers de la construction dans 14 grandes villes canadiennes. On calcule les indices pondérés moyens pour chaque ville de même que l'indice synthétique des 14 villes. Les indices sont publiés chaque trimestre dans les Tableaux 21 et 22 de la publication Prix et indices des prix (numéro de catalogue 62-002). On peut trouver cet indice dans le Tableau 20 de la publication Prix et indices des prix (no 62-002). Des données détaillées sur tous les métiers de la construction dans chaque ville sont publiés chaque trimestre dans le bulletin de service Statistique des prix dans la construction (numéro de catalogue 62-006).

Les taux utilisés dans le calcul des indices proviennent principalement de la publication Construction Collective Agreement Survey Service de l'Association canadienne de la construction. Des enquêtes auprès de certaines succursales de syndicats ont été menées lorsqu'il fallait disposer de taux supplémentaires. On publiera sous peu des indices contenant les avantages supplémentaires, mais les indices actuels portent uniquement sur le salaire syndical de base. Les taux correspondent à la rémunération normale pour une heure dans la ville en question. Les taux convertis en ratios ont été transformés en indices pondérés moyens des villes à partir des données tirées du recensement de la population de 1961 sur les effectifs de chaque métier et les gains moyens dans l'industrie de la construction.

Les indices pondérés permettent d'évaluer l'influence de la variation du taux des salaires syndicaux pour les principaux métiers de la construction dans une ville donnée. Étant donné que les travailleurs syndiqués dans les villes s'occupent surtout de la construction non résidentielle, ou commerciale, et que les taux des métiers relevant du génie civil n'ont pas été inclus dans l'échantillon des prix, les indices constituent la meilleure approximation des variations dans les taux de salaire dans la construction non résidentielle.

Indices des prix de la construction routière (1961=100)(3)

Les indices des prix de la construction routière au Canada représentent les prix payés chaque année par les administrations provinciales au titre des marchés de construction routière, en pourcentages des sommes payées en 1961. La conversion des indices à la base 1961=100 ne modifie pas leur évolution en pourcentages comparativement aux indices publiés précédemment et dont la base était 1956=100. Les utilisateurs ne doivent pas s'attendre à ce que le groupement des indices

(2) Indices des prix de vente dans l'industrie, 1956-1968, n° 62-528 au catalogue.

(3) Il s'agit d'exercices financiers. 1968 représente donc la période du 1er avril 1968 au 31 mars 1969.

aggregation of the converted major group indexes with the published weights will not yield the published 1961=100 all items indexes. The conversion does not create this problem for a user wishing to reweight the converted major group indexes using weights appropriate to his own purpose.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by specified provincial governments during the weight-base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956 are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problem of estimating price change for highway construction see pages vi & vii of the December 1967 issue of Prices and Price Indexes, Catalogue 62-002 and pages 9 & 10 of the reference paper Price Indexes of Highway Construction in Catalogue 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or updating previously costed roadwork, in estimating replacement cost of previously completed roadwork, and as historical measurements of price trends in highway construction.

The indexes do not necessarily reflect the price movements of non-contract construction or maintenance work. The indexes are designed to measure price changes for a fixed programme of highway construction, in each of the seven provinces. Because price levels in the time base-period (1961) varied from province to province the indexes cannot be used to compare price differences between provinces, but only to compare differences in the rate at which prices are changing in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction price indexes but rather for units of construction work put in place such as an acre of clearing, a cubic yard of earth excavation or a ton of bituminous hot-mix paving. In addition, the index contains prices of some materials, such as culvert pipe, usually supplied to the contractor by the highway departments. Prices of highway construction work are annual weighted averages of bid prices of units of construction in groups of contracts awarded, classified by price-determining characteristics of the contracts and the bid items such as volume of the bid item, type of contract and geographic location. Prices of material items of supply are prices paid by government departments to suppliers.

Price Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and equipping electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction technology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

convertis des grands groupes et des pondérations publiées donne l'indice général publié (1961=100). Cette conversion ne pose aucun problème à l'utilisateur qui désire réviser la pondération des indices convertis des grands groupes en utilisant les poids adaptés à ses fins propres.

Les indices pondérés en fonction de la base sont publiés chaque année; ils mesurent, pour la période allant de 1956 à 1968, l'influence de l'évolution des prix sur le coût des programmes spécifiques de construction de routes au Canada représenté par les marchés de construction de routes d'environ \$50,000 ou plus accordés par certaines administrations provinciales au cours de la période visée par la base de pondération. Les poids des éléments des indices qui représentent l'importance relative des unités de construction en 1956 sont constants. Seules les estimations de prix varient d'une année à l'autre; les indices mesurent donc l'évolution des prix dans le temps. Pour plus de détails sur l'estimation de l'évolution des prix pour la construction routière, se reporter aux pages vi et vii du numéro de décembre de Prices and Price Indexes (n° 62-002 au catalogue de Statistique Canada) et aux pages 9 et 10 du bulletin intitulé Price Indexes of Highway Construction in Canada (n° 62-520 au catalogue de Statistique Canada). L'indice général ou ses éléments servent à la planification et à la budgétisation des programmes de construction routière, à indexer ou à mettre à jour les prix de travaux de routes effectués précédemment, à estimer le coût de remplacement des travaux routiers achevés précédemment et à mesurer chronologiquement l'évolution des prix de la construction routière.

Les indices ne reflètent pas nécessairement l'évolution des prix de la construction effectués hors marché ou des travaux d'entretien; ils servent à mesurer les variations de prix pour un programme déterminé de construction routière dans chacune des sept provinces. Au cours de la période qui a servi de base (1961), les niveaux de prix ont varié d'une province à l'autre; aussi, on ne peut utiliser les indices pour comparer des différences de prix entre les provinces mais on peut seulement les employer pour comparer les différences entre taux de variation des prix dans les provinces.

Les prix compris dans l'indice ne se rapportent pas aux unités de travail ni de matériaux comme c'est habituellement le cas dans l'indice des prix de la construction; ils se rapportent plutôt aux unités de travail de construction effectué, comme le défrichement d'une acre de terrain, l'excavation d'une verge cube ou l'épandage à chaud d'une tonne de béton bitumineux. En outre, l'indice comprend le prix de certains matériaux, par exemple, les tuyaux de ponceau fournis habituellement à l'entrepreneur par les ministères de la Voirie. Les prix des travaux de construction routière sont des moyennes pondérées des prix de soumission pour les unités de construction par groupe de marchés classés selon les caractéristiques des marchés qui déterminent le prix et les éléments d'offre tels que le volume de chaque poste, le type de marché et la situation géographique. Les prix des matériaux fournis sont les prix payés par les ministères aux fournisseurs.

Indices des prix à la construction dans les services d'électricité

En ce qui concerne les services d'électricité, l'indice a pour but de fournir une estimation des conséquences des variations de prix sur le coût des matériaux, de la main-d'oeuvre et du matériel utilisés dans la construction et l'équipement des services d'électricité au cours d'une période de référence donnée. L'indice sert à mesurer combien il faudrait payer en plus ou en moins pour réaliser un programme de construction identique à celui de la période de référence en utilisant les mêmes techniques de construction et en supposant que les taux de rentabilité et de productivité de la construction soient les mêmes pour les deux périodes.

As the market does not yield comparable selling prices for such unique transactions as, for example, the sale of a transmission line, it was not possible to produce an index of the prices of completed structures. Completed structure indexes would be appropriate for users wishing either to estimate reproduction costs or to deflate capital formation. For such uses the indexes introduced in this publication have specific shortcomings. Nonetheless, they may be helpful for such purposes provided the users understand the deficiencies. Thus the reader is asked to make particular note of Section III, of Occasional Paper Catalogue 62-526 Price Indexes of Electrical Utility Construction - The Necessity for Compromise and Section XI, (of the same paper) Uses and Limitations. In addition, because particular construction projects are unique, the aggregate indexes will not likely be appropriate to specific projects since they relate to an average mix of materials, labour and equipment derived from a variety of projects in a specific base period. Thus, if the component price indexes and their weights included in the aggregate index presented herein are inappropriate for a particular purpose the user should consider selecting appropriate component indexes from among those published herein. These indexes could then be combined into an aggregate index by utilizing weights derived from the projects or assets to be costed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials or equipment. The price reported is for units and terms of sale representative of the volume sales of the manufacturer. Where sales to electric utilities form a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and others directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial tax changes. Until December 1964 wage rate data were supplied by the Federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union basic wage rates reported by major utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban own account and contract electric utility construction. Some further improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Construction has been defined as new construction or major reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by major utilities, relating to own account and to contract construction erected during the last half of the 1950's. Weights were derived from these data which indicated the relative importance of the major inputs to the construction. The components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and expenditures for labour, e.g. - line-men and groundmen. Costs relating to construction equipment such as trucks, and components of equipment operating costs such as tires, gasoline and repairs were also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land and rights-of-way have been excluded.

Comme il est impossible d'obtenir directement sur le marché des prix de vente comparables pour des opérations de caractère aussi unique, par exemple, que la vente d'une ligne de transport d'énergie, Statistique Canada n'a pu établir un indice du prix des installations en place. Un tel indice ne serait utile que si l'on désirait obtenir une estimation des sommes qu'il faudrait engager pour réaliser à nouveau un programme de construction identique ou encore pour dégonfler une formation de capital. Les indices publiés ici présentent en ce sens certaines lacunes. Ils peuvent néanmoins servir à de telles fins pourvu que les utilisateurs en comprennent les limites. Les lecteurs peuvent se reporter aux Sections III et XI de la publication Price Indexes of Electrical Utility Construction (Statistique Canada, 62-526): "The Necessity for Compromise" et "Uses and Limitations". De plus, en raison du caractère unique de chaque projet de construction, l'indice synthétique ne pourra sans doute pas s'appliquer à un projet bien précis car il porte justement sur une moyenne des matériaux, de la main-d'oeuvre et du matériel utilisés dans la réalisation de plusieurs projets au cours d'une période de référence donnée. Ainsi, si les indices détaillés et les poids correspondants qui composent les indices synthétiques présentés ici ne conviennent pas à un usage bien précis, l'utilisateur pourra toujours se servir des autres indices détaillés et construire, à l'aide des coefficients de pondération, les indices de son choix, soit pour évaluer le coût d'un projet, soit pour établir des facteurs de dégonflement.

La plupart des prix des matériaux et du matériel utilisés pour établir les indices sont les prix de vente déclarés mensuellement par les fabricants. Ces prix sont représentatifs des unités de mesure et des conditions de vente valables pour les ventes en grande quantité des fabricants. Lorsque les ventes aux services électriques ne représentent qu'un faible pourcentage du chiffre d'affaire d'un fabricant, il est possible que le prix déclaré ne représente pas de façon satisfaisante le prix consenti aux entreprises en construction et aux autres industries s'occupant directement de construction et d'installation de services d'électricité. Dans ces cas, on a inclus dans l'indice les prix facturés aux autres fabricants ou grossistes. On a tenu compte, dans l'établissement de l'indice, des variations de la taxe de vente fédérale; toutefois, il n'a été fait aucun redressement pour les variations de taxe provinciale. Jusqu'en décembre 1964, les données sur les taux de rémunération étaient fournies par le ministère fédéral du Travail et représentaient le salaire horaire minimum versé aux personnes travaillant au titre d'un marché accordé par le gouvernement fédéral dans certaines grandes villes. En 1965, on fit entrer dans l'indice le salaire de base exigé par les syndicats et déclaré par les principaux services et par certains entrepreneurs. L'échantillon choisi représente donc une estimation des variations du taux de rémunération dans la construction en ville de services électriques pour compte propre ou au titre d'un marché. Certaines améliorations à l'indice sont prévues de façon à l'étendre aux personnes non syndiquées travaillant dans les régions rurales à la construction de lignes de transport d'énergie.

Le terme "construction" a été défini comme étant la construction neuve ou la réparation de réseaux de distribution, de lignes de transport d'énergie, de postes de transformation ou de postes de manoeuvre. L'entretien et les frais d'exploitation ne sont pas compris. Les données sur les prix de revient sont fournies par les principaux services d'électricité et portent sur la construction exécutée pour compte propre ou au titre d'un marché au cours de la deuxième moitié des années cinquante. Les poids tirés de ces données représentent l'importance relative des principaux éléments entrant dans la construction. Les composantes du coût de la distribution et du transport comprennent certains éléments comme les poteaux, la quincaillerie, les conducteurs, les isolateurs, les compteurs, les transformateurs de distribution et les dépenses en main-d'oeuvre (monteurs, personnel de service, etc.). Les dépenses entraînées par le matériel de construction (camions et pièces d'équipement) et les frais d'exploitation (pneus, essence et réparations) sont également inclus. Les postes de transformation et les postes de manoeuvre comprennent certains des éléments ci-dessus; les frais les plus importants sont cependant entraînés par les transformateurs et les appareils de connexion. Les dépenses foncières et les droits de passage ont été exclus.

The term Canadian electric utility has been defined to include municipal as well as nonmunicipal utilities but the majority of the cost data tabulated was derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

Price Indexes of Hydro-electric Generating Stations

The following additional points may be of assistance to users of the hydro-electric generating stations index which was described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

- (a) Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.
- (b) Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.
- (c) Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.
- (d) Weighting patterns exclude expenditure for ancillary facilities for logging and navigation, permanent houses, etc.

Price Indexes of Machinery & Equipment

In response to the need of users wishing either to correct expenditure data of machinery and equipment for price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968=100 and most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

Conceptually purchasers' prices should be utilized in such indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and federal sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices Division collections from manufacturers most of whom reside in the United States.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim

Par définition, l'expression "service d'électricité canadien" englobe aussi bien les services municipaux que les autres; toutefois, la majeure partie des données de coût ont été tirées des déclarations des services non municipaux. Les fabricants qui produisent de l'électricité destinée à l'auto-consommation et qui peuvent également vendre de l'électricité ont été exclus de cette enquête.

Indices de prix des centrales hydroélectriques

Les points supplémentaires ci-après peuvent aider les utilisateurs de l'indice des centrales hydroélectriques décrit en détail dans le bulletin hors-série de Statistique Canada portant le numéro 62-533.

- (a) Les données sur le taux de rémunération proviennent de diverses sources et surtout des enquêtes sur les accords syndicaux de l'Association canadienne de la construction et des études du Bureau de recherche sur les traitements portant sur la rémunération des travailleurs intellectuels, des techniciens et du personnel administratif. Pour le calcul de l'indice, on a utilisé les taux de rémunération de base, avantages sociaux non compris.
- (b) Au lieu du prix des entrées de main-d'oeuvre, de matériaux et de location de matériel pour la production de béton et des remblais effectués, on a utilisé le prix du béton préparé et celui de la terre et du gravier en place.
- (c) L'indice comprend les prix correspondant à certains postes de dépenses qui n'étaient pas repris auparavant dans les indices de prix des entrées dans la construction: intérêts pendant la construction, frais généraux, fourniture et entretien de barraquements temporaires.
- (d) Les facteurs de pondération ne comprennent pas les dépenses affectées aux installations auxiliaires pour l'exploitation forestière et la navigation, les maisons permanentes, etc.

Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

Les indicés pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968=100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente des fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du U.S. Bureau of Labour Statistics ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre, à mesure qu'ils seront disponibles. En

preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de prix des marchandises, compte non tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.
